

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

Scholarships are awarded annually in various subjects.

Particulars on application to the PRINCIPAL.

MADAME BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

This College, the first of its kind in England, was founded in 1885, with the view of training educated women as Teachers of Scientific Physical Education. Course of Training conducted by a large and efficient staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Gymnastics, and Theory of Movement. In practical instruction is obtained in Ling's Swedish Exercises, Dancing, Outdoor Games, and Medical Massage. At the end of the Course, Examinations are held and certificates of theoretical and practical efficiency in teaching are granted to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, on gravel soil, on the confines of an extensive park. It stands in its own grounds of fourteen acres, which contain an Outing Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnasium, 30 ft. by 25 ft., lofty and well ventilated, are built up in the most perfect style, all the apparatus has been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. A list of posts has been obtained through this medium, a list of which is to be obtained with the prospectus.

Students admitted in September. Particulars apply—THE SECRETARY.

MADAME BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIAC TEACHERS.

Ling's Swedish System.

Aims of the Union: To advance the cause of Physical Education on scientific lines. To place members of this Union as Teachers in schools, careful and discriminating choice is exercised, and the exact requirements of each School are carefully considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

ASSISTANT MISTRESSES AND GOVERNESSES.

Messrs. GABBITAS, THRING & CO.,

36 SACKVILLE STREET, LONDON, W.,

have a Department for SECURING APPOINTMENTS as MISTRESSES or MATRONS in Schools, and as GOVERNESSES in Private Families.

They invite applications from qualified ladies who are looking for posts in the teaching profession.

The Agency, which is under distinguished patronage, has been established 40 years.

Prospectus will be forwarded gratis on application.

NO CHARGE FOR REGISTRATION.

No fee of any kind is due unless an appointment be obtained through the Agency.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS.

MESSRS. GABBITAS, THRING & CO. have a large number of GIRLS' SCHOOLS on the books of their Transfer Department, but **ISSUE NO LIST**. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are a few of the Schools now on their books:—

IN AND NEAR LONDON.

No. **PARTNERSHIP** with a view to succession, 5,281. if desired, in an **EXCEPTIONALLY SUCCESSFUL SCHOOL** of the highest class, for Boarders only, in a good residential part of London. Fees from £95 to £115 per annum, besides considerable extras. Gross receipts over £2,500. Net profits about £250.

IN THE SOUTH OF ENGLAND.

No. **TRANSFER** or **PARTNERSHIP**, with 5,312. view to succession, of old-established and very **SUCCESSFUL SCHOOL** for the daughters of professional men, Boarders only, at a **SOUTH-EAST COAST RESORT**. About 35 Pupils, at fees of 70 to 80 guineas. **PRACTICALLY FULL. PREMISES** specially erected for the School. Gross receipts over £2,500, and net profits over £300. **BOTH INCREASING**. For goodwill, furniture, and equipment £2,000. Premises would be let.

No. **TRANSFER** of old-established and successful **BOARDING AND DAY SCHOOL** at South Coast resort, containing about 20 Boarders and 10 Day Pupils. Prospectus fees for Boarders 75 to 90 guineas, excepting for Foreign Boarders at 10 guineas per month. **GOOD FOREIGN CONNEXION**. Gross receipts for last 12 months nearly £3,000, showing **INCREASE** on average of last 3 years. **PROFITS ALSO INCREASING** nearly £500. Goodwill £1,100.

No. **TRANSFER** of large and successful **BOARDING AND DAY SCHOOL** for Gentlemen's Daughters, at South Coast resort, containing about 30 Boarders and 50 Day Pupils. Prospectus fees 75 to 85 and 12 to 24 guineas respectively. **NUMBERS STEADILY MAINTAINED**. Gross receipts over £2,500. Profits about £500, which would be **LARGELY INCREASED** by incorporation of Junior House. Goodwill £1,500.

IN THE SOUTH OF ENGLAND—continued.

No. **TRANSFER** of **FLOURISHING BOARDING AND DAY SCHOOL** in an **IMPROVING RESIDENTIAL DISTRICT**, on the outskirts of a healthy seaside town, containing nearly 20 Boarders and 40 Day Pupils and Day Boarders. Prospectus fees respectively 45 to 75 and 12 to 18 guineas per annum. Day Boarders pay 9 guineas in addition. Gross receipts over £1,800, and profits over £400. Goodwill £900.

No. **TRANSFER** of profitable **BOARDING AND DAY SCHOOL** at a South-West Coast Resort, containing about 20 Boarders, prospectus fees 60 to 75 guineas and 20 Day Pupils, prospectus fees 15 to 21 guineas. Gross receipts nearly £2,500, and net profits over £750. Goodwill £1,800. **HALF PURCHASE MONEY** would be accepted in the first instance.

No. **PARTNERSHIP**, with a view to **SUCCESSION, IN FIRST-RATE BOARDING SCHOOL**, at South Coast Resort, containing about 40 Boarders at prospectus fees of 80 to 100 guineas. School **LONG BEEN STEADILY FULL**. From £3,000 to £4,000 for a half share, this sum including an interest in the **EXCELLENT PREMISES**, which are the property of the Vendor.

No. **TRANSFER** or **PARTNERSHIP**. Old-established School for Gentlemen's Daughters, at a South Coast Resort, with **BRANCH** at another Seaside Resort **SHORTLY TO BE ESTABLISHED**. Now **FULL**, with about 60 Boarders. Fees of 60 to 75 guineas. Receipts over £4,000, and profits over £1,200. Both **CONSIDERABLY INCREASING**. Goodwill of the whole, £2,000.

IN THE NORTH AND MIDLANDS.

No. **TRANSFER** of Boarding and Day School 5,305. at **NORTH-WEST SEASIDE RESORT. VERY OLD ESTABLISHED**. Containing 4 Boarders and about 35 Day Pupils and

In the NORTH AND MIDLANDS—continued.

Day Boarders. Prospectus fees 60 to 75 guineas, and 9 to 21 guineas. Gross receipts about £1,400, and profits nearly £200. Goodwill £450.

No. **TRANSFER** of good class small **MIXED SCHOOL** and Kindergarten at a residential locality near a Midland city, containing nearly 20 Pupils. Profit about £100. Goodwill £100.

No. **TRANSFER** of Upper Middle-class Day 5,303. and Boarding School at an **EAST COAST RESORT**, containing about 10 Boarders and 20 Day Pupils. Prospectus fees from £30 to £60, and £6 6s. to £15 15s. per annum. Gross receipts over £800, and profits over £300. Goodwill £500.

No. **TRANSFER** of Nucleus of Boarding and 5,299. Day School at a very healthy and rising **SEASIDE RESIDENTIAL LOCALITY**, containing about 27 Pupils. Prospectus fees 60 to 75 and 9 to 21 guineas. Gross receipts about £900. **VERY ATTRACTIVE HOUSE AND GROUNDS**. Goodwill 1½ terms' fees.

ON THE CONTINENT.

No. **TRANSFER** or **PARTNERSHIP**, suitable 4,993. for **EITHER A GERMAN OR ENGLISH LADY**, in flourishing School, at **IMPORTANT EDUCATIONAL CENTRE IN GERMANY. ESTABLISHED 40 YEARS**. Containing nearly 20 Boarders. Fees 80 guineas. Gross receipts over £2,500. Goodwill of the whole, £1,200.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require full particulars before arranging introductions to their clients. No charge is made to Purchasers.

J. M. DENT & SONS, LIMITED, NEW AND FORTHCOMING BOOKS.

MODERN LANGUAGES.

Histoire de France: I. Les Premiers Français. By E. A. WOOLF, B.A., The County School, Ramsgate. Illustrated, pp. viii + 88. 2s.

Histoire de France: III.—La Guerre de Cent Ans. By E. ALEC WOOLF, B.A. [In the Press.]
This new volume in our illustrated series, dealing with important periods of French History, is no less attractive than "Les Premiers Français." It treats of a time when England and France were in close contact, and includes the stirring figures of Du Guesclin and of Joan of Arc. In addition to illustrations elucidating the text, there are questions on the subject matter, and exercises on the vocabulary and grammar, as well as suggestions for free composition.

Grammaire en Histoire. By R. GUERRA, and C. CHICOTEAU, B. ès L. Illustrated, pp. x + 140. 2s.

A Table of French Verbs. By SAMUEL WILD, The Grammar School, Basle. Printed on untearable paper. 6d. net.

French Essays and Essay-Writing. By J. P. R. MARICHAL, L. ès L., B. ès Sc., Lecturer in French at Queen's University, Kingston, Ontario. [In the Press.]

A careful introduction, by a skilled and experienced teacher, to the writing of French essays. Judiciously graded exercises with copious model passages and valuable hints on method serve to lead the learner from simple beginnings to the advanced stages. The book can therefore be used as a companion during a considerable portion of the school course and in the early years of university work.

A Manual of French Literature. By J. P. R. MARICHAL, L. ès L., B. ès Sc., Lecturer in French at Queen's University, Kingston, Ontario. [In the Press.]

This brightly written handbook serves to give a bird's-eye view of the course of French literature, with useful sections on the history of France, a knowledge of which is often indispensable to the student of literature. The book is written in simple French, and thus at the same time familiarizes the reader with the vocabulary of the literary critic and of the historian.

Manuel Pratique de Prononciation et de Lecture Françaises. By L. BASCAN, Ex-Professeur de Lettres à l'Ecole Normale d'Institutes de Caen; Directeur d'Ecole Supérieure Professionnelle. Crown 8vo. 228 pp. 2s. 6d.

Lectures-Dictées de Phonétique Française. By the same Author. 64 pp. Crown 8vo, cloth, 1s.

This little work completes the "Manuel Pratique," and explains clearly the formation of French sounds.

SHORT FRENCH READERS. FIVE NEW VOLUMES.

Légendes Normandes. Par M. LOUIS BASCAN. Edited by A. H. LEGH, M.A. 4d.

Le Château de Ghismondo. Par NODIER. Edited by P. L. RAWES, M.A. 4d.

La Cour des Miracles. Edited by H. M. O'GRADY. 4d.

Histoire d'un Consort de 1813 (L'Hiver à Phalsbourg). Par ERCKMANN-CHATRIAN. Edited by P. L. RAWES, M.A. 4d.

Louis XI et Charles le Téméraire. Edited by S. A. RICHARDS, B.A. 6d.

ENGLISH LITERATURE AND COMPOSITION.

English Literature for Schools. Edited by ARTHUR BURRELL, M.A.

Fifteen Titles to be published immediately. Please write for Prospectus and List of Titles.

The publishers, in announcing the first fifteen volumes of this important series, would direct attention to the wide, and in many cases original, selection made by the editor. It is hoped that the selection will give the pupil a real insight into the field of English Literature.

The books are printed from an entirely new face of type (at present the property of the publishers) specially designed for legibility, but, at the same time, not occupying more space than usual, whereby the amount of text given is in no way curtailed.

The books are strongly bound in cloth boards, and are approximately 128 pp. each volume. Price each volume, 6d.

Lessons in Prose and Verse Composition. By W. J. ADDIS, M.A., Head Master of the County Secondary School, Brockley, S.E. 1s. 4d.

An Exegesis of English Composition, with Examples and Exercises. By the same author. 3s. 6d.

Composition Through Reading. The Direct Method of Teaching English. In two volumes. By F. PICKLES, M.A., Head Master of St. George Secondary School, Bristol. Vol. I (Now ready). Price 1s. 4d. net. Vol. II. (Ready shortly).

Précis Writing for Beginners. By RANKIN WENLOCK, F.R.G.S., The County School, Barry. Crown 8vo, cloth. 1s. 6d. Key, 1s. net.

This beginner's course includes—Notes in Précis Writing: How to write a Précis: How to give a Précis lesson: How to make an Index.

GEOGRAPHY.

Dent's Practical Notebooks of Regional Geography. By HORACE PIGGOTT, M.A., Ph.D., and ROBERT J. FINCH, F.R.G.S., Senior Geography Master at Hornsey County School. 6d. net each.

I. The Americas. II. Asia. III. Africa. IV. Europe. V. The British Isles. VI. General Survey of the British Empire, and detailed Survey of the Empire in America and Asia. VII. The British Empire in Africa and Australia.

OCCASIONAL NOTES.

WE characterized 1912 as a year of promise, and though we cannot describe 1913 as a year of fulfilment, yet we have gathered in the firstfruits, and there has been no nipping frost to cut short our expectation of a full harvest.

1913.

The Registration Council has accomplished the task that was set it: teachers of all grades have responded to the call, and are flocking to enrol themselves as members of a common and united profession. Another accomplished fact is the meeting of Joint Conferences now sitting at the Imperial Institute; and it is not rash to prophesy that the Teachers' Week of Conferences will become no less an institution than the annual meeting of the British Association. For the rest, the great Government Bill of educational reform is still in embryo, and, beyond the definite promise of a substantial increase in the Exchequer grant to relieve and equalize the local rates, little is known of its provisions. State-aided and State-guaranteed pensions for secondary teachers are still a hope deferred, and nothing has been done to raise their salaries, though the Board of Education has admitted that they are shamefully inadequate. The multiplicity of examinations is likewise denounced as a crying evil, but no steps have been taken to carry out the recommendation of the Consultative Committee to frame a scheme for a common leaving examination and certificate.

THE Registration Council may fairly congratulate themselves on the chorus of approval with which the conditions for registration have been hailed. It is evident that the great mass of teachers, at least, are satisfied with them. This is a good beginning, but it is only a beginning. The Register will need all the support that teachers can give it if it is to be an efficacious instrument for raising the standard of the profession. As things stand, there is a big gulf between the regulations of the Board of Education and the regulations of the Registration Council respecting admittance to the profession. The Council demands training as a qualification for such admittance. The Board admits as fully qualified teachers for elementary schools a host of untrained men and women, and places no restriction whatsoever on the appointment of unqualified persons in secondary schools. There can be only one solution for these difficulties. The Board must raise its requirements up to the level of the conditions of the Council. The Register cannot be a register of the aristocracy of the profession only, nor can the presence of large numbers of unqualified teachers in schools be permanently tolerated. The battle for recognition will no doubt be a hard one. It is the teachers who will have to fight it, and they must open fire by applying for registration. On every educational platform this month it should be proclaimed that any teacher who does not send in his name is failing in his first duty towards education and towards the profession.

A NEW rival site is in the field. The London County Council has discovered that Somerset House would make an admirable home for a University. What its exact qualifications are for this high function we have not been told, but, though we can claim no knowledge of its interior arrangements, we find it hard to believe that it possesses very many of the requirements of a University building, except massive and dignified architecture. But even if it possessed those requirements, its situation ought to put it out of court. It is placed where no University quarter can be formed. Its exact distance from the British Museum or University College is of no particular consequence. The point is that the Strand is not a possible centre for the academic area. There are two, and only two, such possible centres in London; one is South Kensington and the other is Bloomsbury.

"MY view is that Cowper-Temple teaching is just as sectarian as denominational education." This sentence is extracted not from a speech by Lord Halifax or Lord Hugh Cecil, but from an address delivered by Lord Haldane at the National Liberal Club. Coming from the Minister whom we may fairly call the leading educationist in the Cabinet, it is a remarkable utterance. It seems to indicate an abandonment by the Government of the principle that only one kind of religious instruction ought to be provided by the State. It looks as if they were beginning to recognize the inadequacy of the theory of the foundation, or bottom layer, common to all forms of Christianity. Such common foundation exists, no doubt, in the shape of certain theological propositions to which all Christians can subscribe, but the deeper question remains, On what does the foundation rest? For one party it rests on inward experience and feeling and on

The
Register.

London
University.

The Religious
Question.

a Book ; for the other on authority and tradition, and each party regards the temple of the other as founded upon the sand. Differences in religious belief which go so deep cannot be adjusted by the drawing up of syllabuses. They have divided Christians since the days of the Apostles, and will no doubt continue to divide them to the end. Educationists and teachers can do nothing to reconcile the opposites, because, in the view of both parties, the matter in dispute lies in a region in which the teaching profession has no authority, and because religion is not, and never can be, simply a subject to be taught, but is also a life to be lived.

THE question of tenure in the older secondary schools does not seem to make much progress, if we may judge from a resolution put down for the annual meeting of the Assistant Masters' Association. That resolution pleads for the right of the assistant to be heard by the Governing Body before notice of dismissal takes effect. If the claim for such elementary justice as this is still refused, what likelihood is there of the appeal to the Board of Education ever being granted, even though the head masters support it? The fact is that assistant masters have not yet discovered how to move Government Departments. To secure a reform in the traditional system of tenure needs a strong and persistent display of widespread feeling, and this the assistants have never made. We speak subject to correction, but we do not think that they have ever mustered three hundred strong at a meeting. They have found one brilliant advocate and have passed many resolutions, but Departments are not affected by brilliant speeches nor by mere resolutions.

IN his inaugural lecture at East London College, which has just been published, Sir Sidney Lee gave much consideration to the question of learning to write English. A definite thought, he said, and the ambition to divulge it, have rarely proved in themselves forces sufficient for the production of a good style. This is quite true, but at the same time it is needful to remember that the thought and the desire are the necessary antecedent conditions of writing at all. Before we can write, we must think, and before we can think we must have ideas and information. Success in essay writing therefore, either in colleges or schools, can never be something detached and standing alone, like success in music, for instance ; it must depend upon the whole content of the pupils' mind and on his general capacity for clear thinking. Boys and girls frequently fail in composition because they have nothing to say. The practical deductions from this are that original work should not be required too frequently—once a fortnight is probably often enough—and that school children should have constant practice in exercises, the matter for which is supplied to them, such as answers to historical questions, descriptions of well-known scenes (a very difficult exercise), and translation. On the other hand, it is no doubt true that writing helps not only to clarify but also to stimulate thought, and that *l'appétit vient en mangeant*.

THOUGH one cannot write clearly unless one thinks clearly, one can certainly think clearly without writing clearly, and no one will quarrel with Sir Sidney

What Authors to study.

Lee's advice to his students to study and assimilate the work of the best authors. But who are the best authors for this purpose? On this question Sir Sidney, surely to the regret of his audience, did not touch ; but he indicated his view that the merit of writing is proportioned to its simplicity, directness, good taste, and sincerity. This is admirable, for these qualities, though not the only possible qualities of style, are those at which the student ought to aim first. We cannot all learn to write eloquently or brilliantly, but we all ought to be able to write with clearness, straightforwardness, and a right feeling for language. We should, therefore, study the authors who possess these virtues and avoid those who cultivate a florid, rhetorical, or affected style. The old rule was "Give your days and nights to Addison." But we need not confine ourselves to Addison ; Dryden, Swift, Hume, and other eighteenth-century authors ; Newman, Froude, Stevenson, in the nineteenth—these, and others like them, are perhaps the writers from whom may best be caught the infection of a style that is lucid without being dry, forcible without being noisy, and simple without being futile.

FROM the absence of any reference to the question of the constitution of Local Education Authorities from recent Ministerial pronouncements on education, we are obliged to infer that the Government considers that the Act of 1902, strongly opposed though it was from the Liberal benches in this respect, is regarded officially as incapable of improvement, so far as the local control of education is concerned. Nevertheless, evidence is accumulating that expert opinion favours some reconsideration of this question, especially as regards the larger towns and county areas. The result of Principal Griffiths's referendum to Directors and Secretaries of Education Committees, published in his address to the British Association, is significant, and cannot be ignored. Mr. Cyril Jackson, whose prejudices, one would suppose, would be on the side of the existing order, suggests in his recent book that the constitution of the London Education Committee might be improved, a view which we share in common with many others.

IN his speech at Manchester Mr. Pease showed some disposition to adopt as a guiding principle the enforcement of a national minimum salary for teachers. Such a policy in a profession subsidized so largely by the State is, at any rate, as easy to justify on economic grounds as the fixing of a minimum wage for agricultural labourers. A national minimum for qualified teachers would not, however, have much effect on teachers in secondary schools, from whom higher qualifications are required, and the determination of salaries officially with reference to qualifications raises many difficult questions. But the first step is the acceptance of the principle that the State can fix a minimum salary without necessarily converting the teaching profession into a branch of the Civil Service : and this step the Minister for Education appears to be prepared to take.

IT is curious how the mind of the man in the street anxious to promote education turns to the institution of a new examination. Mr. Robert Donald, President of

**Education
of Journalists.**

the Institute of Journalists, has been applying himself to the question of professional tests for journalists, and recommends the imposition of a compulsory test which would mean some degree of fitness for professional work. He has not a word to say about education. The work of journalists is an excellent discipline for training intelligence and alertness. For that very reason, perhaps, journalists require the guidance and inspiration which University teachers of history, economics, and law can give. We should have expected that the success of dozens of University schools of journalism in the United States, including Columbia University in New York, would have stimulated the Institute of Journalists to activity, if their declared policy of raising professional standards has any real meaning.

THE Duke of Portland is to head a deputation which is to wait upon the Minister of Education to urge the claims of University College, Nottingham, to become a University for the East Midlands. **A University for Nottingham.** The deputation will be able to produce evidence that the College is increasing its influence in Notts, Derbyshire, and neighbouring counties, is developing its work, and is securing financial support from industrial organizations, including coal-mining corporations. The educational issue resolves itself into the question whether the staff of the College is sufficiently strong to warrant the grant of the privilege of drawing up the courses of study and conducting the examinations for University degrees. The present system, under which the College accepts the control of the University of London in these matters without any definite affiliation, is obviously not an ideal arrangement.

AN advertisement of books about sex covering nearly half a page in an educational contemporary is a sign, more graphic than any number of speeches, of the actuality of the question of instruction in sexual matters. **Teaching about Sex.** It is plain that silence on such subjects will not be much longer thought a proper method of treatment. Mere denunciation of immorality will not be considered adequate; boys and girls must during adolescence receive definite instruction. The problem of how this is to be done is too big for a note, but we may say that we have seen no better suggestion than that the best method of approach is through the study of generation as seen in plants and animals, because in this way the teacher can lead up to the difficult element in the subject gradually without causing any flutter of excitement—the thing to be most carefully avoided. But, whatever we teach about sex in classes, it cannot take the place of quiet conversation with the individual boy or girl. That is what will always exert the best ethical influence. Some preparatory-school masters have a straight talk with every boy before he leaves to enter a public school. There can be no better missionaries of sexual morality than these men—except, indeed, the parent.

IN our November number we referred to the inquiry into the alleged deterioration in the teaching of the "three R's" instituted by the Lancashire Education Committee. The inquiry is now complete. The opinions of a number of local educationists have been elicited, and Dr. Lloyd Snape, the Director of Education,

**The "Three R's"
in Elementary
Education.**

has summed up. His conclusions agree pretty well with the views expressed in the November note. There is less accuracy in arithmetic, spelling and handwriting have deteriorated, but children write compositions more freely; interest and intelligence have improved, and skill in woodwork, gardening, and domestic crafts counterbalances to some extent the falling off in the clerical subjects. On the other hand, he is apparently not wholly satisfied with certain modern methods which neglect training in accuracy, because it conflicts with the development of the child's individuality. The exaggeration of a sound principle is always the weakness of that large number of teachers who do not understand that compromise is the first law of education, as it is of politics. The view, for instance, that "handwriting is not to be taught; each child is to develop his own idiosyncrasies in this subject," is simply individualism gone mad. If this principle is sound, why trouble children to write at all? Why not go back to hieroglyphics, which they would probably find much more interesting, and which undoubtedly would give far greater scope for ingenuity and idiosyncrasies.

THE Mansion House Advisory Committee of Associations for Boys is doing admirable work in supervising and co-ordinating the various agencies for the care of boys when they leave school until they are launched on some settled business or employment. On the Committee are represented (a) the various Boys' Brigades, including Boy Scouts, (b) the various Government Offices concerned, including the London Labour Exchanges of the Board of Trade and the L.C.C. Education Authority. A concrete instance will best show how the scheme works. An L.C.C. Care Committee has seen to it that before he leaves school the school-leaving form of John Jones has been filled up. This, with a request from the boy or his parents that he wishes to register at the Exchange, is sent to the local Labour Exchange. Jones is then summoned to appear before the Juvenile Advisory Committee, and an attempt is made to find him suitable employment. When a post is found, his Care Committee is advised of the fact, and it is their duty to see the boy, and at the end of a month report on the work and welfare. Similar reports are subsequently made biennially. In this way the Central Committee has cognizance of over 60,000 London boys, knows how they are employed, what instruction and what physical training, if any, they are receiving. They now claim full recognition by the Board of Education and a place in the coming Reform Bill of National Education, and we think they have made good their claim.

THE address on "Modern Development in Physical Training," given to the League of the Empire by Lieut.-Colonel C. Bjelke Peterson, Director of Physical Training to the Commonwealth of Australia, showed how far in this branch of education England lags behind other countries. Germany has in Berlin the largest and best equipped institution that the speaker had seen, and also in the suburbs a Physical Training College of gigantic proportions, with open-air gymnasia and playing grounds attached. The students are specially selected teachers. Sweden is justly proud of its Central Institute at Stockholm, where Ling was trained, but it is significant of the Swedish system that it serves for the

**Physical
Training.**

Army as well as teachers. In Denmark there are a number of State Physical Training Colleges. A one-year course of 450 hours is required for certificated teachers. All school children have four hours a week of gymnastics. Swimming schools are a distinctive feature of the country. In France all men teachers physically fit escape three months of military service and attend the Physical Training Institute instead. In Australia the six States handed over the instruction of teachers in physical training to the Defence Department of the Commonwealth. The duty of the speaker was to select and train the staff, who, in their turn, educate the teachers in physical training. Training institutions are free to teachers, who generally either receive scholarships or have their salaries continued while they are in training. The moral we would venture to draw—not that, we need hardly add, of the lecturer—is, first, that the State is bound to subsidize, by way of scholarships or capitation grant, physical training colleges for teachers; secondly, that school gymnastics must be kept distinct from military drill.

MR. G. L. BRUCE'S motion in the London Education Committee, in favour of three months' holiday on full pay for teachers who have served ten years, and a holiday twice as long for those who have served twenty, has our warmest sympathy. Teaching is an incessant giving out of personal force—a fact which, as was seen in the discussion, the man in the street finds it hard to understand—and teachers need long periods for recuperation. Physical exhaustion is perhaps not commoner in the educational profession than in some others, but here it takes the form of "staleness"—a condition in which intellect and feelings are alike dulled, and the teacher becomes a talking-machine. What has to be brought home to the public is that the "stale" and mentally exhausted teacher is of very little value in the classroom. We should like to see an off term, as is the custom in the United States, given to every master and mistress not only in elementary, but also in secondary schools once every five years. We are convinced that the public would get good value for the money spent. We would have the teachers encouraged to divide the period between unadulterated holiday-making in the open air and intellectual refreshment in the shape of the indulgence of hobbies, travel, and study that does not bear directly on their school work.

**Grace
Terms.**

THINGS do not seem to be advancing much in Herefordshire. The Special Committee appointed to consider the question of salaries recommended that, while a few of the worst cases should be dealt with individually, the request for a scale should be refused. The Education Committee adopted their recommendations, all amendments being, for some reason we do not understand, ruled out of order by the Chairman. The Bishop of Hereford and one or two others pleaded in vain for a more generous consideration of the teachers' grievances. The most hopeful feature of the situation is that the meeting of school managers which the Bishop convened passed resolutions in favour of a general increase of salaries and the adoption of a scale. Meantime we are informed that the resignations of the remainder of the County teachers will be handed in at the end of the

Herefordshire.

month, to take effect on January 31. The maintenance of the efficiency of the schools will then be the problem, and this is a question ultimately for the Board of Education.

THEY do things differently in Canada. A project to secure annually three or four hundred University students as officers for the Canadian Militia, which has been worked out by Colonel Hughes, the Minister of Militia, is launched with donations of £20,000 from Lord Strathcona and approximately £100,000 from Major Leonard. Special hostels are to be provided for students undergoing the training. The system is to be started at the McGill and Queen's Universities, and other Universities are expected to take their part. We may perhaps congratulate ourselves that the germ of the idea has come from our Officers Training Corps; but the princely benefactions and the hostels are peculiar to the Canadian scheme. Much yet remains to be done in the old country for the promotion of military education, and we note with pleasure that the University of London is calling a conference to consider the question of military education in London.

**Military
Education.**

SERIOUS complaints about the dilatoriness of the Government in establishing the School of Oriental Languages were made at the meeting of the members of the London Institution the other day. When the Institution was conveyed to the Board of Works in 1912, the Government made an agreement with the members to found a School of Oriental Languages in the building. Though nearly two years have passed since then, no steps towards carrying out this agreement have been taken. The Chairman thought the delay was due to the unwillingness of the Treasury to find the money, and went so far as to accuse the Government of a breach of faith. It is certainly remarkable that nothing has been done to establish the much needed school.

**The School
of Oriental
Languages.**

LOCAL AUTHORITIES.

THE ninth report of the Education Committee for the West Riding of Yorkshire is a well considered review of the work in that extensive administrative area. The number of public secondary schools now available reaches the total of fifty. Of these twenty are "dual," sixteen for boys and fourteen for girls. During the past ten years the attendance of pupils has increased from 2,990 to 6,949, and, in addition, over 1,500 pupils are attending schools in the county boroughs. Of the 6,949 boys and girls in attendance at West Riding schools 44.9 per cent. are scholarship holders, and 55.1 per cent. fee-paying pupils. In recent years, it is noted, the number of children remaining in the schools after reaching the age of sixteen has tended to decrease. On the other hand, there is an increase in the proportion of those admitted under twelve years of age. The early leaving age is probably in part due to the recent trade boom in the West Riding, which has made employment easy to obtain. This has also affected the number of pupils desiring to enter the teaching profession.

**Yorks :
West Riding.**

It is shown in the report that the number of pupil-teachers and bursars appointed during the past six years has declined from 542 in 1908-9 to 223 in 1912-13. There appears, however, to be some evidence that the limit of reduction has been reached, although there is no immediate prospect of appointing more than half the number of 520 bursars and pupil-teachers estimated to be necessary to satisfy

**Supply
of Teachers.**

the needs of the area. The question has been considered by a special Sub-committee, who came to the conclusion that the only step likely to produce an improvement in the near future would be to offer assistance to more pupils, holders of scholarships and others, between the ages of fourteen and sixteen, to enable them to remain at school until qualified for appointment as bursars. The Sub-committee were unable, however, to recommend that any further financial responsibility should be undertaken by the County Council, but suggested urging the Board of Education to make provision from national funds to meet the need.

ADEQUATE facilities for the professional training of teachers are provided by the West Riding Committee. The erection of the Bingley Training College is now complete, and accommodation for two hundred students is afforded. Arrangements are also made with the Corporation of Leeds for the admission annually of twenty-five men students from the West Riding to the Training College established by that Authority. In addition to four training-college studentships offered to bursars, student-teachers, and pupil-teachers, grants of £5 or £10 were made to eighty-six students at training colleges in the past three years. The system of advances to students, repayable in suitable instalments after the termination of the college course, has been continued. Advances of £20 or less have been granted to thirteen students in all, of whom seven are also the holders of grants in aid. This appears to be a very useful method of enabling necessitous students to complete their professional training. Grants in aid were also given to enable 136 acting teachers to attend vacation courses.

THE improvements effected in the adult teaching staff, compared with 1905-6, have been considerable. The number of teachers of various grades for every thousand scholars in average attendance is as follows:

	1905-6.	1912-13.
Scholars in average attendance.	170,288	176,791
Certificated Teachers:		
Head	7.42	7.25
Assistant	5.56	10.81
Uncertificated Teachers	10.32	11.0
Other Adult Teachers	5.52	3.0
	28.82	32.06

The percentage of college trained certificated assistant teachers employed was, in 1906, 23.43. It is now 53.60. The expenditure on teachers' salaries continues to increase, and in 1913 reached the total of £465,568, an advance of £10,505 on the previous year. The increase is due to (a) improved staffing, (b) higher average salaries, and (c) opening of new schools. The cost of staffing per unit of average attendance was, for all schools, £2. 1s. 7d. in 1905, and is now £2. 5s. 6d.

THE Cumberland Education Committee's Tenth Annual Report is a careful and complete record of good work. The administration appears to be enlightened and efficient, and the rates have certainly contributed more than a fair share towards the cost of the progressive policy which the Committee has pursued. In 1904-5, for elementary education the rate was 6d. in the £; it is now 10½d., and during that period the Government grants have decreased. For higher education, in 1904-5 an expenditure of £11,830 was necessary, involving a rate of 1½d.; the estimate for the present year is £35,240, and the rate 2d. As the number of children to be educated has decreased, the additional expenditure is entirely due to better remuneration for the teachers, improved conditions for the children, and further facilities. In 1905 the cost of teachers' salaries for each child in average attendance was £2. 7s. 2d.; it is now £2. 16s. The certificated assistant teachers employed per 1,000 children in attendance has advanced from 3.9 to 6.6, uncertificated teachers from 9.5 to 14.0, and supplementary from 4.0 to 6.0. The total adult teaching staff was 27.4, and is now 37.1 per 1,000 of the children.

THE development of "practical education" during the past few years has made rapid progress in Cumberland. Paper and cardboard modelling has been introduced into 57 schools, and 6,872 children have been under instruction; woodwork is taken by 767 boys from 21 schools, and gardening in connexion with 46 schools for 706 children. Domestic subjects were taught to over 2,000 girls from 78 schools, and the plan for the transfer of reading books, adopted some years ago, continues to work successfully. During the year

31,975 books were received from the schools, about a third of which were destroyed, the remainder after a process of disinfection being reissued. School libraries are also supplied with changes of books on a similar system. The report refers to an interesting method of dealing with school furniture. Two peripatetic joiners are engaged to visit schools for the purpose of converting old desks of defective construction into those of the dual type. The desks when altered are equal to, and in some respects better than, those supplied now from manufacturers, and unanimous satisfaction has been expressed by the managers of schools where alterations have been carried out. In three years 2,823 dual desks have been provided in this way at a cost, it is stated, of £800 less than the cost of the new article.

To the "alarming decrease" in the supply of intending teachers the Committee has given anxious thought and consideration, and a scheme was adopted which anticipated in principle the proposals issued by the Board of Education with a view to enlisting recruits in the rural districts. The Cumberland Education Committee has certainly not been reluctant to establish secondary schools, and during the past ten years over £72,000 has been expended in new buildings and the enlargement of existing secondary schools. At twelve schools there were 1,506 pupils in attendance, of which total 609 did not pay fees. The non-fee-paying pupils consisted of the following:—Pupil-teachers, bursars, and student-teachers, 107; intermediate and minor scholars, 159; free-placers, 287; holders of other scholarships, 58. And, these additional facilities notwithstanding, the supply of intending teachers has dropped from 97 in 1907-8 to 48 in 1912-13.

IF all Local Authorities adopted the attitude of the Herefordshire Committee, the prospect of increasing the supply of teachers would not be considerable. In reply to Sir J. H. Yoxall's suggestion that the salaries paid to fully qualified teachers in that area are among the lowest in the kingdom, and in the case of Head Teachers but a few pence more per annum on the average now than they were when the Authority took over the control of education a decade ago, the Committee says: "These salaries must under any reasonable system remain among the lowest in the kingdom, as the schools of Herefordshire are among the smallest schools in the kingdom." Under any reasonable system a duly qualified teacher is entitled to expect, and can obtain, a rate of remuneration the minimum of which ought to be considerably higher than the Herefordshire "average." Are the children attending small schools to be taught by unqualified teachers? The attitude of the Herefordshire Committee cannot be justified educationally; nor does it merit sympathy on financial grounds, for the amount of the education rate in that area does not appear to be an overwhelming burden.

SCIENCE NOTES.

SCIENCE is one of the humanities. The truly cultured mind is aware of this truth, and a science teacher who fails to grasp this idea may certainly be accused of some defect of culture. Science is neither more nor less than one of the great achievements of the human mind to which the rising generation is heir, and it is the high aim of science teaching to induce in boys and girls some appreciation of their inheritance.

THE foregoing paragraph was prompted by a survey of the programs of January meetings, particularly by the intention of the science masters to devote a whole morning to discussing "The Present Condition of Science Teaching in Public Schools." We suspect that the difficulty of obtaining for science a fair share of the time-table is due to no small measure to a mistaken and narrow view of science which is not uncommon in quite influential quarters. The idea that science is purely materialistic is unfortunately widespread, and the classicist is prone to regard himself as a champion of ideocracy against physiocracy. He has not read Karl Pearson's "Grammar of Science."

THE chief requirements for ordinary school work are space, time, tools, raw materials (glass, wood, metal, rubber), and a few standard instruments, including a good microscope. The best luxury is a supply of power which can be used and regulated at any moment. A large

supply of ready-made instruments is of less value than the services of a skilled mechanic. There will be a magnificent display of apparatus at the Imperial College on January 13 and 14, and we intend to spend some time inspecting the first-rate products of the leading firms, hoping to learn not a little therefrom. But we shall try to remember that the value of the "results" lies not in attaining the fourth decimal place, but in imparting a clear apprehension of principles. The question to be answered is: Will this piece of apparatus help the boys to gain *intellectual* control of their surroundings?

AT the Birmingham meeting of the British Association, Prof. Leonard Hill gave a demonstration of his *kata-thermometer*, an instrument of great importance in connexion with the ventilation of schools. It also affords incidentally an excellent illustration of the laws of evaporation, latent heat, and specific heat. It consists of two thermometers; the bulb of one is dry and that of the other is wrapped in moist cloth. The times required for the respective thermometers to cool from 110° to 100° F. is recorded, and from the results one can gain information as to the physical state of the air. In ordinary classroom conditions the influence of this physical state on health is far greater than any exerted by respiratory waste products.

THE annual meeting of the Mathematical Association will be held at the London Day Training College on January 7. A full and interesting program has been issued, which includes addresses from Sir George Greenhill and Dr. W. N. Shaw. The Director of the Meteorological Office entitles his discourse "*Principia Atmospherica*."

"THE right use of note-books" is a sub-heading in one of the promised papers to be read at the P.S.S.M.A. meeting. The author's attention is given primarily to the laboratory note-book. How about note-taking at lecture demonstrations? Not infrequently the weak spot in the organization of the science work is caused by the lecture and laboratory work being disconnected. Attention was called in these columns some months ago to the value of an original and connected account written by the pupil of the inferences of importance reached by the study of each "method-unit." By "method-unit" we mean a section of the syllabus which forms a natural—as distinguished from a time-table—unit.

FOR experiments on transpiration it is sometimes desirable to close the stomata on a particular area or surface. This may be quite effectively done by applying a thin coat of vaseline. Sir Francis Darwin recently observed the transpiration rates of leaves thus coated and then cut up into strips, and found that such leaves transpire at almost normal rates. Experiments were made by the same observer on the relative rates of transpiration in light and darkness. Both the potometer and the weighing methods were used, and the results were variable. Quite roughly, the transpiration rate in light is 30 per cent. higher than in darkness. Similar observations might be repeated as a class experiment in schools where physiological botany is studied. Sir Francis Darwin's paper was read at the Royal Society on December 4.

NOTES ON EDUCATION.

By "AN OLD FOGY."

FROM the columns of your excellent journal—where you diligently record proposals and opinions, bewildering in number and perplexing in variety—I gather that we are epoch-makers in the cause of educational progress. The schools of the nation, you would have me believe, are emerging from a long night of penury and misconception: the dawn of affluence and understanding approaches. Teachers and taught are to be emancipated; the "liberal ideas of the age" are no longer to be opposed by the "moral ideas of all ages." We are to find what we have lost, and to restore intellectual credit by liberty, equality—and registration. Lord Haldane—although,

I see, one of his colleagues suggested that his head is far above mundane considerations—is to open a broad highway from elementary school to University: a road along which, Dr. Clifford says, there will be no "ecclesiastical toll-bars." Every private in the ranks of life is to qualify for the position of Commander-in-Chief. Institutions and individuals are to be emancipated from old restraints, precautions, and conventions—in the name of progress. And progress, I have read somewhere, is a fluid quality; solidity, form, and stability assuming a liquefactive condition, and tending to gravitate to the lowest levels.

* * *

LORD HALDANE claims to be an apostle of clear thinking; but his utterances on education are nebulous, inconclusive, and unconvincing. "Education, if it is to be interesting," he said, "must be an affair of the spirit. It must be an endeavour to raise the intellectual, moral, and spiritual faculties of the people." Has anybody suggested that it was anything else? But he said it must be made plain to democracy what education means. Then, I gather, it ceases to be "an affair of the spirit," and becomes a matter of the pocket. Thus Lord Haldane's Second Division clerk who entered the Civil Service at eighteen complained bitterly that there was a higher division class who came in at twenty-two and had passed through a University, and that the best places went to the First Division. This is the great question, said Lord Haldane, affecting thousands of people throughout the length and breadth of the land. "Their grievance is that there is no equality of educational opportunity for the son of the poor man and the son of the rich man; and what we have to do in the interests of the democracy is to provide equality of educational opportunity." Their grievance, if it exists, is that they want what other folk want and what it is impracticable for all to obtain.

Ole Uncle S., sez he, I guess
He's like the rest, sez he:
When all is done, it's number one
Thet's nearest to J.B.
Ez wall ez t'you an' me.

The problem is, and is likely to remain, not so much inequality of opportunity as inequality of capacity. And further, if all the clerks in the Second Division of the Civil Service enjoyed the right of a University education it might be a little difficult for Lord Haldane to know what to do with them.

* * *

COMPARED with the fervent generalities of Lord Haldane, the oration of the President of the Teachers' Union displayed judgment and common sense. His text was much the same, but he made better use of it. Democracy, it appears, has no desire for the educational "ladder"—the symbol of regulated opportunity accepted as adequate in the more strenuous days of my youth. The time has come, said the President, to cease talking of the ladder. "The welfare of the nation demands not a ladder, but a broad, firm, and well laid highway along which the poorest may travel if they possess ability." This implies, I suppose, that we must not expect ability to climb: it shall be sufficient to hobble along with the crowd. But I was reassured to learn that "the worker's child who enters a secondary school need not by so doing cut himself adrift from the class to which he belongs. If he has the ability and wishes to be a captain of industry or the head of a department, then his education will assist him to obtain these posts; but, if not, he will return to his father's occupation, or some other chosen by himself, with faculties developed, views broadened, and character strengthened. He will not despise his occupation, but, if he finds its conditions unsatisfactory, his education will enable him to discover the means of improving these conditions, not only for his benefit, but for that of his fellow-workers. Education does not breed discontent with honest labour, but with the unjust environments of that labour, and in so doing points out how this injustice may be remedied." The President is sanguine, and his picture is too good to be true.

I THINK Mr. Stephen Reynolds's "working class view" of the problem is more likely to be true:

"They say that the children ought to be kept at school till they're fifteen. . . .—'Fifteen! Why, they keeps 'em there two years too long as 'tis, I reckon. I don't say a few o' em don't rise through it, but they clever sort 'd rise anyhow, wi'out forcing, if the chance was offered 'em. For the heft (greater part) of the likes o' us 'tis different. You may learn summat to school, or you may not; precious little o' it's any use; but I reckon you learns manlihood and womanlihood after you leaves school, an' the sooner you begins to learn thic, the better. . . . I tell thee, if you got to live your life wi' your nose to the grindstone, like most o' us has, the sooner you learns to put it there the better."

* * *

A FRIEND of mine sent me a book recently entitled "University Tutorial Classes." I gather from it that because a few intelligent working men and women display a commendable desire to study, under suitable guidance, "Economics" and "History," another educational millennium has been inaugurated. Thirty years ago, I remember, University extension was paraded as "a national movement impelled by latent forces," which would solve the problem of higher education for the masses. In its way, and within its limits, the system of University Extension is useful. Similarly, it seems to me the University Tutorial Classes, described as "full of hope and promise for the future of our country," represent another well intentioned but somewhat costly side issue of educational activity. Among the "glories of the tutorial class system," it appears, is the admission of a claim that "nothing must be done for the workers but that which they themselves want," that adult study must proceed on lines of complete freedom, and that the ordinary pedagogic methods of Universities are incomplete. This, I suppose, is what is termed the "W.E.A." spirit applied to the principles of education.

* * *

THE salvation of Latin teaching, I gather, depends upon the adoption of the "Direct Method," but I am still unenlightened as to the grounds for the contention that it is capable of being treated as a modern language. Fortunately, the revolutionary movement appears to have evoked little response from the older Universities and public schools—from the men, that is, of convincing credentials in regard to classical studies. I know not whether the lack of any influential representation of these interests is due to their indifference to reform. Perhaps, however, the line of attack upon old methods, the normal starting-point for advocating the new, is not attractive. Or may be it is difficult to convince the "old school" that their training, and incidentally their success, have been entirely profitless and nugatory.

* * *

A CORRESPONDENT informs me that the Summer School at Cambridge afforded a complete curriculum for the conversion of the teacher. "We were to create a Roman atmosphere: to think and speak as Romans." It seems incredible for anyone to believe that a dead language should be regarded as capable of restoration without being degraded by a strong leaven of modernity. In the home-made Latin plays the Suffrage, the British Workman, and the knockabout business of the music hall (*O Mamercorum alapa*) were not considered derogatory to a Roman atmosphere. And the "atmosphere" must be carried into all departments of school life; and in the playground—the last sanctuary of the pupil from the priggishness of the classroom—Latin must be the medium of expression. Pupils must not appeal for the standard of correctness to what the "Romans said," but to what "We say." Since authorities differ as to the pronunciation of the "hidden quantity," and are not in agreement as to the correct utterance of a good many words where the quantity is not hidden, the "we" might be honoured if inspired by some degree of humility and some appreciation of the position. But the shibboleth of the book is to be replaced by the shibboleth of the tongue, and if "speaking Latin" is to be the end, what advantage can be claimed for Latin compared

with, for instance, German? The modern language can at any rate be spoken with some semblance of reality, and the "atmosphere" need not be one of sheer puerility and affectation.

* * *

THE truth of the matter is, perhaps, that one of "the amiable busybodies," as Sir William Anson might say, impatient of slow progress, has abandoned the ladder of reform for the slender rope of experiment. He has done something, believes he has done more, and wants everybody to leave the ladder and try the rope. "It is a pity," says my correspondent, "that the steady work of reform should be retarded by the extravaganzas of a few faddists who have only a dim conception of the circumstances and possibilities of the majority of schools. Conversational Latin has been on trial before, and has been found wanting. Ascham and Erasmus believed it to be their lever, but failed to move the world; it was rediscovered in the sixties of last century, and now to-day

Occidit miseros crambe repetita magistros.

* * *

To be the friend of Swiveller it was necessary to reject all circumstantial evidence, all reason, observation, and experience, and repose a blind belief in the bookcase. If you would earn applause where teachers congregate, you must cultivate what I see a writer terms the German's besetting weakness—"belief in the omnipotence, for good or evil, of the pedagogic art." You must not probe beneath the surface nor ask for results; you must not count the cost of "what is," but pay for "what might be." Because Principal Griffiths, at the British Association, ventured to inquire whether we are getting value for the £34,000,000 of annual expenditure on education, and to record some of the conclusions of his inquiry, his address was not appreciated by the enthusiasts. I agree with Dr. Griffiths that there has been during the past thirty years an undesirable tendency to give greater prominence to the acquisition of knowledge than to the development of character. I am doubtful, however, whether it is nowadays correct to say: "We appear to think that the learning of 'the three R's' is education." I sometimes wish we did. If I am correctly informed, we are disposed to think that to educate is to supply teaching, without discrimination, in a variety of subjects; to create a pleasing superstructure without sufficient regard to the foundations; to render the work of the schools productive without, as someone has said, "that reasonable proportion of patient drudgery which forms a necessary factor in all mental and moral training."

* * *

THE results of an inquiry concerning the curriculum of elementary schools in Lancashire, and the educational progress of children, do not support the contentions of believers in the bookcase. The replies made by Local Committees "indicate the existence of a widespread feeling that of late years there has been deterioration in the 'three R's.'" On the other hand, about half of those who replied consider that this deterioration is balanced by "increased intelligence," or other improvement. Accuracy in arithmetic and spelling is thought to be less common than formerly. Eighteen Committees, representing 78,800 school places, are of opinion that the deterioration is due to the multiplicity of subjects. Merit Certificate Examination papers were examined by different members of the Education Committee, who, as might be expected, were differently impressed. One says, "I consider the work greatly in advance of what would have been presented, say, thirty years ago"; another, "the general impression left on my mind after looking through the papers is not a favourable one. . . . In neither the Arithmetic nor the Composition paper could I see anything to justify the belief that what has been lost in accuracy and neatness has been compensated by any extra amount of general intelligence."

* * *

CIVIL SERVANTS, Sir L. A. Selby-Bigge says, soon learn to keep silence, especially when they have something interesting to say, and H.M. Inspectors, until they retire, are, as a

rule, careful to say not what they know to be true, but what they are expected to believe. Elementary education has been grievously harassed by the well intentioned efforts of immature or insufficiently informed Inspectors. "We no sooner get one method working than another Inspector advises something different." At a recent meeting of a District Committee a clergyman graphically related the circumstances of a visit by an Inspectress. She walked into the school, removed her gloves, and said: "Good morning; I suppose you know who I am? I am the Inspector from London." Then she began to find fault with everything. The syllabus of teaching was antiquated. The teachers must be more up-to-date. Did they tell the children fairy tales? Did they allow the children to sleep in the afternoon? "Oh, you must let the children sleep for half an hour every afternoon." The head teacher, says the *Schoolmaster*, has revised the syllabus accordingly. It now provides for half an hour's sleep; the teachers have a pillow for each child, and the children sleep in order. A member suggested that when next the Inspectress visited the school she should be asked if the subject was being efficiently taught.

* * *

I MET one of H.M. Inspectors the other day, whose views, it seems to me, were sound and completely in opposition to the general sentiments of his colleagues. "I have come to the conclusion," he said, "that it is a profound mistake even to suggest new methods to old schoolmasters. If they are doing their duty according to their lights, it is well to leave them alone. Their methods may be antiquated, their outlook limited, but I am convinced that it is better not to interfere with either, provided the masters are teaching to the best of their ability." This Inspector is wise. "It is true many bodies are the worse for the meddling with; and the multitude of physicians hath destroyed many sound patients with their wrong practice."

* * *

ALTHOUGH not "a great admirer of projects and a person of much curiosity and easy belief," I observe with interest the advent of new methods or the revival of novel proposals, designed to indicate "the broad highway," if not "the right path of a virtuous and noble education." You have discovered, I see, another "ism." From centralism, with its necessary increase of inspectorialism, we cannot escape; co-ordinationism is still a futile expedient cherished by officialism; and the purposes of trade unionism will be stimulated by registrationism. All these, directly or indirectly, are concerned with equality and uniformity; and yet (to quote one of my favourites) "Plutarke saith in some place that he findes no such great difference between beast and beast, as he findeth diversitie between man and man." It is consoling to know, therefore, that someone has "dashed off in considerably less than a day" an account of a new system entitled "differentialism." I am too old, alas! to attempt to determine by experiment whether differentialism applied to class self-teaching has any merits; but I welcome this addition to our "isms" on account of its name.

* * *

ANOTHER "ism," of significance recently, has been defined as a method of realizing the millennium by the action and under the government of trade unions. This is the theory of Syndicalism. By the confederation of labour, acting independently and coercively, the brotherhood of man, with adequate rewards for all the brethren, will be secured. In alluding to the Teachers' Register as a manifestation of the Syndicalist spirit Mr. Michael E. Sadler was perhaps prophetic; or perhaps he only used a noisy word to describe a quiet movement. Because all sorts and conditions of teachers are to be registered, it is difficult to suppose that they are likely to organize a general strike to redress a grievance of the Union of Teachers of the Deaf on the Pure Oral System. Still less likely are they, it would seem, to adopt the sinister weapons of sabotage. I have never been an enthusiast for registrationism, as I am doubtful of the efficacy of the process.

But the representatives of innumerable interests having settled their differences, "An Old Fogey" can but wish them well, and hope the great adventure will yield all the anticipated benefits.

* * *

MR. J. A. PEASE is a thoughtful and zealous President of the Education Board, who desires to render the schools more popular, to extend their influence, and to redress the inequalities of local taxation. He appears to have some definite ideas, and great hopes of translating them into an Act of Parliament. It is, doubtful, however, whether many of these ideas can be realized without a large addition to the contributions from the Exchequer. And, if I am correctly informed, it is more than doubtful whether these contributions will be forthcoming. Perhaps, therefore, the period of welcome rest from legislative activity will be still further prolonged. I hope it will be so.

U. U.

THE FAILURE OF EVENING CONTINUATION CLASSES.

WHY is it that the results accruing from evening continuation classes are in reality so poor? Anyone who has had anything to do with them knows only too well that there is not only a tremendous waste of money, but also a waste of energy and time on the part of both teacher and taught. Why is this? Is the system in vogue radically wrong? Is it beyond reform? Must a real solution go far deeper? The faults of the present system are many and serious.

(1) The classes are far from homogeneous, especially in the first year. They are so absurdly large that individual attention is impossible. In the same class are to be found persons of all ages and all degrees of mental development. The writer has had the pathetic task of trying to teach French in a beginner's class to men and women well past the prime of life, who had long forgotten how to learn anything—and this in a class of forty.

(2) There is a lack of discipline and control which breaks the school tradition. The attendance becomes more and more irregular as the session progresses, and many classes have perforce to drop out of the time-table, the faithful few being either ignored or sent to join another class. In the matter of homework, the majority ignore it, and little progress can be made, for most of the time is taken up by revising the previous week's work. Again, students are admitted almost at any time within a month from the beginning of each term. This frequently leads to open chaos.

(3) More serious still is the mental condition of the average evening student. It does not require much experience on the part of the teacher to see how ill-prepared the student is for the task before him. Probably he or she has had a hard day's work, and comes into the classroom mentally and physically unfit for the strain of two hours' further exertion. The writer has witnessed instances where the student has shut his book in sheer despair. He was absolutely worn out, and his brain refused to respond to the efforts demanded. It is no exaggeration to say that in a good many cases evening classes as at present conducted are a curse rather than a blessing. The students would have been better employed recuperating their weary limbs and tired brains. The two hours' extra strain inevitably tells its tale next day in the listlessness of the student.

(4) Lastly, in the majority of cases the evening classes aim too high. The organizers of such classes lose sight of one or two important facts. They forget that the material they have to deal with is an intellectual proletariat. The best material will in all probability have left the elementary school for the secondary or technical school. We shall return to this point again. Here let us be content to remark that the function of evening classes is not even to *pretend* to turn out foreign

correspondents, reporters, mathematicians, and scientists. It is an utter impossibility to do more than touch the fringe of these subjects, and the question arises, could not the time be better spent? There is always a run on the French, shorthand, and book-keeping classes—why? Poor misguided students, they are encouraged in their yearning to become clerks. Can nothing be done to increase the usefulness of evening classes?

(1) In the first place they ought to be made to fit more accurately into our scheme of national education. The net ought to be spread far wider, and it is here that the voluntary principle as applied to evening classes has failed. A small percentage of elementary school boys pass on to the secondary schools, but the vast majority go to work, and in our large towns far too many find their way into blind alley employments, later to swell the ranks of the "unemployable." It is here that we find the most vulnerable point in our educational armour; it is here that a strong hand is necessary; half measures would be useless. Any break in the scheme of education at this point proves fatal. This then should be the object of our continuation schools—to prevent the educational waste in those plastic years after a boy or girl leaves school and is turned into the workshop or on to the streets with little or no supervision, to conserve the educational results of school life and to develop it wherever possible, to guide our youths and girls over those critical years of early "freedom."

How is this to be done? Some form of compulsion seems necessary. Education conscription seems a terrible doctrine to advocate, but in reality there is nothing terrible about it. Much of the voluntary principle as applied to evening classes is little more than "home compulsion." In many spheres of life where parents have proved themselves lacking in the sense of duty, the State has stepped in; why not in this case of national importance? In many cases the State would work through the employers of labour, who ought to be convinced that their moral obligation to their employés is very great. They ought to make provision for the educational needs of the young people in their charge, or grant facilities for their attendance at some acknowledged centre. This is already done by many large employers of labour, who give every encouragement to their employés, and often offer promotion as a further incentive. Where both the home and the employer fail, the State must deal directly with the youths of no fixed occupation. This will be the most difficult and yet the most essential part of the scheme, for there is such evident need of doing something in this direction. A serious effort ought to be made to win this section of the population for civilization.

We must bear in mind that the principle of compulsion would apply to the employer, and a necessary corollary to all evening classes is the restriction of the hours of juvenile employment. The student, if he is to derive any benefit from them, must come with a fresh and vigorous mind, and not tired out by long hours of mental or manual labour. If the youth of the land is to be compelled to attend classes, say for six hours a week, there ought to be a corresponding reduction in his working hours. Still more important is this in the case of girls.

(2) This brings us to the most difficult part of the question—the types and aims of evening classes. There would, of course, be the well known commercial and technical classes for those who were considered fitted to profit by them. These would, however, be far less in number, for at present hundreds of boys and girls take up these subjects who would be far better employed in other ways. The great need is for classes that are not educational in the narrow sense, but educational in the widest possible sense. The objects of the Workers' Educational Association or even of the village Mutual Improvement Society might with advantage be copied. Evening classes ought not to aim at converting a skilled artisan into a clerk, or, for that matter, into a more skilled workman. The average youth from the workshop has had quite enough of his trade and ought to be taken out of its atmosphere. Vocational evening classes are in the majority of cases worse than useless. This applies absolutely to the thousands engaged in unskilled

labour (and these will always be with us) and also very widely to those employed at some trade.

After his day's work is done the youth would gain refreshment both for his body and his mind by the recreative study of subjects that would broaden his views of life and widen his outlook. In the dark winter evenings, continuation classes should perform the function that outdoor games and country walks do during the long summer evenings. All too long have such things as physical exercise and recreative pursuits been lost sight of. Along with this the student might be instructed sympathetically in the wonders of his own country's history and the formation of the constitution. The glories of our literature could be brought to his notice and some idea given of the duties of citizenship. Most evening classes then ought to partake of the nature of a club where manual and physical training is given, and where the members' minds are refreshed in the ways mentioned above. It is becoming more and more evident that continuation classes can do little or nothing—in the majority of cases—in the field of education as narrowly understood, but they can be made useful instruments on the side of civilization.

THE HEAD MASTERS' CONFERENCE.

THE Annual Meeting was held this year on December 23 and 24 at Reading School, on the invitation of the Rev. W. C. EPPSTEIN, who presided. In spite of the unfavourable weather, there was a good attendance. Some sixty-five Head Masters were present for part of the proceedings or the whole, including the Heads of Eton, Harrow, Winchester, Rugby, Charterhouse, Cheltenham, Bradfield, Shrewsbury, Repton, and Birmingham. On the evening of the first day the Conference was entertained at dinner by the Mayor of Reading. The guest of the evening was Dr. G. R. Parkin, Secretary of the Rhodes Trust and the biographer of Edward Thring, the founder of the Conference.

Tuesday's session was occupied mainly with the address delivered by Sir J. A. Ewing, Director of Naval Instruction, a full and lucid exposition of the new Admiralty scheme for a supplementary supply of naval cadets from the public schools. The scheme met with general approval, but some disappointment was shown with the ruling of the Chairman, who announced that criticism of the scheme would be out of order. Some, for instance, would have desired to hear an official definition of a public school.

The resolution approving the conditions of registration was carried unanimously without debate; but here again we should have welcomed a rider pledging the Head Masters to register themselves and to use their influence to persuade their staffs to register.

The resolution moved by Dr. David urging the Head Masters to co-operate in the forthcoming national scheme of education was supported by weighty arguments, but subsequent speakers gave little or no indication of what form they desired the scheme should take, and the Conference resolved, as is its wont, to appoint a committee to consider what steps should be taken.

In approving the reformed scheme for Responsions at Oxford, the Conference reaffirmed previous resolutions in favour of the abolition of compulsory Greek. At least on this measure of reform the Conference has shown consistency.

The same cannot be said of their attitude towards the reformed pronunciation of Latin, which was the subject of the second day's session. Seven years ago the Conference were understood to have pledged themselves to the adoption of the new and authorized pronunciation, but since then there have been numerous backslidings. The preparatory schools, or a majority of them, have decided that it is too hard for small boys to learn, and Eton masters, or all but two, have successfully kicked against the yoke. Thus, in spite of the Board of Education's fiat, *δινος βασιλεύει*, and Dr. Lyttelton holds that no one is the worse for it.

The New Scheme for Naval Cadets.

SIR ALFRED EWING began his address with a retrospect. Just ten years had elapsed since the introduction of the reformed scheme of entry and training of naval officers, and the Admiralty had every reason to be satisfied with the results. Nor had they now any intention of superseding or altering it, but, in consequence of new developments, such as submarines and aeroplanes, it was found that the supply of officers was not equal to the demand, and they had turned to the public schools to make good the deficit, and he was there to urge the Conference to send them of their best product. The age hitherto chosen for entrance to Osborne had been between thirteen and fourteen, the transition age between the preparatory and the public school. For the special class of cadets the age would be fixed at about eighteen, by which time a boy would have completed his course at a public school. Candidates would be chosen by a competitive examination, identical with the examination for Woolwich, except that there would be an extra paper set in the elements of engineering. Thus a candidate might enter his name for Woolwich, Sandhurst, or the Navy, naming his order of preference as in the Home and Indian Civil Service Examination. There would also be, as in the case of the present cadets, a preliminary interview with the Board of Admiralty in order to weed out obviously unsuitable candidates. The period of training for these senior cadets would be somewhat shortened—twelve months in harbour and six months cruising at sea. They would still obtain the rank of midshipman a year later than the Osborne cadets, but there would be ample opportunities, if they showed superior ability, of overcoming this handicap.

In answer to questions, Sir Alfred said that the engineering paper would be optional, but there was no alternative for it. The intention was not to add an additional subject to the curriculum, but only to test a candidate's aptitude for dealing with practical mechanics. The preliminary instruction at school must have been mainly in mathematics and science, and he could hold out no hopes of modifying the examination to suit boys on the classical side.

The Teachers' Register.

MR. CARY GILSON, in proposing a resolution welcoming the establishment of the Teachers' Register, and approving the conditions, gave six reasons for their approbation: (1) it would tend to exclude charlatans; (2) it would, they hoped, raise the status of the profession; (3) the insistence, ultimately, on a period of training would give a much-needed filip to the training of secondary teachers; (4) the raising of the professional status might perhaps tend to exercise a good effect on salaries and pensions; (5) it might bring more good men into the profession; (6) a Register established *ab intra*, not by a Government Department, was some guarantee for freedom of teaching for the future, and one of the most hopeful signs of the times.

The Rev. the Hon. E. LYTTLETON seconded. He regarded the Register as an outward and visible sign of the unity of the profession and a safeguard against Government control in the future. The Eton assistant master who, when asked in his holidays what he was going to do for the next three months, replied, "I am staying with friends in Bucks," belonged to a past generation.

The resolution was carried unanimously.

A National Scheme of Education.

Dr. DAVID (Rugby) moved:—

"That, since there is now some prospect that a national scheme of education may be formed, the Committee be instructed to consider possible methods of co-operation in such a scheme by the public schools and to report to the next conference."

He said that, assuming that some comprehensive scheme of legislation was in prospect, he wanted to make one suggestion as to their duty in the matter. One cause of the success of their schools was that during the whole of their history they had been free and had grown up on their own individual lines. That freedom they did not propose to surrender if they could help it. But they would not secure it by standing aloof. If English education could be guided between the two extremes of confused and chaotic aims on the one hand, which some of them felt they were dangerously near now, and on the other the deadening grip of Government control, surely they would be able to help and guide and save it. But they could not help from outside. If it came to communication between them and the authorities, they must lay down as a condition that non-local schools should be quite definitely free from any controlling direction by any Local or Provincial Authority, and their relations should be directly with head-quarters. He imagined they would be invited to agree to a scheme for a common certificate for the leaving

examination to take the shape in the work of training men for the teaching profession, and also to assist by scholarships to boys from schools of lower grade. Obviously the difficulties of such a scheme of scholarships could only be solved if the authorities interested had come into close co-operation beforehand.

The Rev. LIONEL FORD (Harrow), in seconding, said that personally he did not think the dangers were anything like so great as their fears anticipated. Why should it be assumed that the State was going to impose a dull monotony upon them all? The movement should meet either with the active co-operation of the Conference or be opposed.

The Rev. C. A. ALINGTON (Shrewsbury) did not see what they could possibly do during the next year.

The Rev. W. TEMPLE (Repton) supported the resolution. The movement for educational legislation came from the Labour Party. What they demanded was training through a common life rather than through common instruction.

Mr. A. L. FRANCIS (Blundell's School) moved as an amendment:—"The time has come for this Conference to co-operate with the Board of Education, the Universities, and other educational authorities in dealing with the pressing problems of education, and that a committee be formed for this purpose."

The amendment was defeated by 39 votes to 8, and the original motion was then carried by 52 votes to 3, with the addition of words providing that the Committee of the Conference should select a committee to consider the methods of co-operation referred to in the resolution.

Reformed Pronunciation of Latin.

The second session of the Conference on Wednesday morning was occupied by a lively debate on a motion of the Rev. H. COSTLEY WHITE (Bradfield) inviting every member of the Conference to pledge himself to adopt throughout his school the reformed pronunciation of Latin as recommended by the Classical Association. Seven years ago the subject was introduced at their Conference and that of the Associated Head Masters and of the Assistant Masters. All three decided that this was the right pronunciation to adopt, and there was a tacit understanding that it would be adopted by all. This expectation had not been realized. In the Association of Preparatory Schools figures issued at the beginning of the year showed that 219 schools had used it, but the number had now fallen to 177. There were now 148 which deliberately did not use it and 174 which condemned it on principle. At Bradfield he had examined 169 boys and found that of these only 62 had been taught the correct pronunciation at their preparatory school. For public schools definite figures were lacking, but an inquiry of the Classical Association showed that of 39 only 24 professed to use it throughout the school. One consequence was that when a boy proceeded to Oxford he heard a cacophonous jargon. There was no place in the world where Latin was more variously and more villainously pronounced than at Oxford. Tutors and professors pleaded that unless they pronounced Latin as English they would not be understood. The onus of responsibility rested with the public schools. If they were unanimous in adopting the reform, the preparatory schools would be forced to follow suit and the Universities would no longer be compelled to see and approve the better way and to follow the worst. All reforms involved some difficulty at starting, but this had not prevented the radical reforms of the last ten years in the teaching of geography and geometry. And in part the difficulty was self-created. Could anything be more preposterous than the practice of some schools, to allow the old pronunciation in the lower forms and introduce the reformed pronunciation half-way up the school?

Mr. F. FLETCHER seconded.

Dr. LYTTLETON (Eton) said for two years he did his utmost to get the reformed pronunciation adopted at Eton. The masters set to work, perhaps not all with equal zeal, but certainly with a good deal of zeal and loyalty, but in the end he found that it could not be done. He could not resist the unanimous declaration of his masters—except, perhaps, two—that they found it retarded the boys' progress. Added to this, there was the lack of uniformity in the preparatory schools. As Latin became more and more important, they had to determine whether the reform was worth while, in view of the greater difficulty to every single boy below the top class. He did not think it worth while. He was not in the least averse from the reformed pronunciation on principle, but simply from practical considerations. He thought chaos was a bad thing, but he could not see any justification for the gloomy prophecies made that morning, and for the statement that this change was essential to the prosperity of the classics, or the welfare of Latin or of their pupils. They had gone on for long in chaos, and it was not easy to see that any very bad results could be traced to it.

Dr. HOUGHTON (Rossall) said he was at the Conference of 1906, and he had no recollection that they pledged themselves. When he went to Rossall in 1908 he found the new pronunciation in work-

ing order, and he left it, but he discovered by experience that it had been a very serious hindrance in teaching small boys.

Mr. F. B. MALIM (Haileybury) said the municipal and secondary schools were, as a rule, adopting the recommendations of the Board of Education. If they stood up for something medieval they were deliberately refusing to give them the lead which it was their duty to do.

Mr. E. H. S. WALDE (Chigwell) said the Classical Association, which represented the best classical interests, was unanimous about the reformed pronunciation. His experience was that there was no difficulty about the change. He would undertake to teach a boy the reformed pronunciation in a fortnight.

Dr. UPCOTT (Christ's Hospital) said he had never found any of the difficulties alleged. The new pronunciation was good for the study of versification, good for the study of modern languages and for the international mutual understanding of Latin, good for the musical, the literary, and the historical sense, and good in the name of common sense.

The Rev. A. C. ALINGTON (Shrewsbury) said he had changed his pronunciation ten times, and he had always used the new pronunciation since he went to Shrewsbury, and he had never had the faintest doubt that he was wrong in doing so.

Mr. NOWELL SMITH (Sherborne) said he thought it would have been better to postpone the discussion, although he was in favour of the reformed pronunciation. He moved the previous question in order that the subject might be properly discussed on another occasion.

Canon JAMES (Malvern) said if they were going to pass a resolution which they knew perfectly well that Eton, for instance, would not follow up, was not it rather foolish?

Canon WATERFIELD (Cheltenham) agreed that the new pronunciation was perplexing for small boys. But he saw no difficulty in changing over from the old to the new pronunciation in the sixth form. The subject should be referred to the Preparatory Schools Association.

The previous question was defeated by 24 votes to 23, and the resolution was then carried by 31 to 17.

Mr. Alington (Shrewsbury), Mr. Lowrie (Tonbridge), and Mr. Nowell Smith (Sherborne) were elected to fill the three vacant places in the Committee. The Conference next Christmas will meet in London at the Imperial College of Science.

IMPRESSIONS OF A FRENCH TRAINING COLLEGE.

A LONGER training is required of the elementary teacher in France than in England. The ordinary course at an *école normale*, entrance to which is gained by a stiff competitive examination, lasts three years, the first two being occupied in preparation for the *Brevet supérieur*, while the practical training is left to the third. The first impression one gains is that a great deal of work is expected of the French student. The subjects for the *Brevet supérieur*, all of which are compulsory, are French literature and composition, one foreign language, arithmetic, algebra, geometry, three sciences, psychology, ethics, history, geography, music, and drawing. In addition to these, needlework and cookery are generally taught at the women's colleges, though they are not required for the examination. It is of course not altogether possible to judge of the difficulty of an examination merely by considering its syllabus, or to compare it for instance with the English Teachers' Certificate, but I was told that the standard taken is a high one, for which a very detailed knowledge of some subjects is necessary. There are questions on theoretical as well as practical arithmetic, the geography course involves a considerable knowledge of geology, and among the English set books for one year there was a story by Kipling. The most alarming characteristic of the *Brevet supérieur* is that there is an oral examination in every subject, in some cases this being the sole test. Even when there is a written paper in addition, it consists of only one question, so that a candidate is given no choice, but passes or fails on his knowledge of one particular part of the subject. There are, of course, drawbacks

to a method into which chance enters so largely, but the oral system of examination certainly has its advantages in the case of a profession like teaching, where success so much depends on the ability to express one's ideas clearly. The chief objection to the *viva voce* method—that candidates may be too nervous to do themselves justice—is to a great extent obviated by the kind of training given at a French *école normale*, the usual way of questioning a class being to call upon one or two students to give short expositions of some particular point. For those who have been accustomed to stand up and make speeches of five or ten minutes' duration in this way, an oral examination should present few terrors.

Third-year students drop some subjects, and increase the time spent on others, such as French literature. They also begin a course of pedagogy, and during the year spend about eight weeks each in teaching at the practising schools attached to the college. Criticism lessons are given every week in the presence of the whole of the staff and the other third-year students. At the end of this year there is another examination, the practical part of which consists of a lesson given before an inspector, and the written part of a thesis on some question connected with education, the subject for which is announced several weeks beforehand.

Another point which immediately impresses an observer accustomed to English schools and colleges is the absence not merely of religious instruction, but of any recognition of the existence of religion at all. I have heard it said that the name of God must not be mentioned, but I do not know if the secular idea is really carried to such a literal extreme. Certainly there is no Scripture teaching of any kind, its place being taken by lectures on Ethics; there is no assembly for prayers in the morning or evening, and no grace is said at meals. On Sundays there are no classes, but certain hours are set apart for study, and the amount to be done is so great that most students would find it impossible to manage without using this time. There are a few hours free in the morning, during which anyone who wishes to attend a place of worship may do so, but the number of those who avail themselves of this permission is usually small.

The examination requirements and courses of study are the same for all *écoles normales* throughout France, but the domestic arrangements and discipline naturally vary in the different colleges, as they are left to the discretion of the Principal. As regards these I can speak only of the conditions which obtained at the particular one I visited—a women's college—and cannot say how far it is typical of the rest. Here there were about fifty students, all resident, for even those whose homes are in the town are expected to live in college on the same terms as the rest. The college is a three-storied building of grey stone, built on three sides of a courtyard, with the practising schools adjoining. The public rooms include a *salon* or students' common-room, a separate classroom for each year, a small library, special rooms for drawing and needlework, and a refectory. In most of these there may be seen printed notices issued by the Education Department with reference to the danger of consumption and the necessity of taking precautions against it. After emphasizing the importance of ventilation—a warning which seemed to have been taken to heart in this case, for the building was as airy and well ventilated as anyone could desire—the notice proceeds to urge students not to borrow each other's handkerchiefs, and to refrain from spitting and from excessive indulgence in alcohol. One can only hope that the last two rules were framed with the men's colleges in mind rather than the women's.

The day's routine is as follows. The first bell is at half-past 6, breakfast at 7, and classes from 8 to 12, with a few minutes' break at 10 o'clock. After *déjeuner*, at 12, the students go out for a walk until 2, or, if the weather is wet, amuse themselves indoors. The next two hours are again given up to work. A few classes, chiefly in such subjects as music and drawing, are held in the afternoon; the rest of the time is spent in private study. The next hour is free, except for ten or fifteen minutes' drill. Such a meal as tea is unknown; the only food provided by the college at this hour is bread, but

the students generally supplement it with something of their own. From 5 to half-past 7 they study again; dinner follows, after which there is about half an hour for recreation—generally dancing in the *salon*—before bedtime at half-past 8. This routine is the same all the year round, except that in the summer months the daily walk is taken between 4 and 5, and the drill lesson is changed to the hour after *déjeuner*. In addition to their studies, the students have a considerable amount of housework to do. Not only do they make their beds, lay the tables, and clear away the meals, but they are also expected to sweep and dust the dormitory and the classrooms, and to iron, though not to wash, their own clothes.

On the whole the life which these girls lead has many more restrictions than English girls at college are subjected to. The only gate which gives access to the street is opened from the concierge's lodge, so that no one can pass in or out without her knowledge. In fact, no student ever goes out alone; the daily walk is taken in a "crocodile," with a mistress in charge, and, even when girls who live in the town are allowed to visit their homes, one of their relatives must fetch them from the college and escort them back. The dormitory in which they sleep is merely a large room, in which the beds are separated from each other not by partitions, but by curtains; and these curtains are drawn round the beds only while the occupants are actually dressing and undressing; during the night they are drawn back, so that the *surveillante* passing through has a full view of the whole room. While in college all students wear overalls of dark grey or black-and-white print, hideous shapeless garments which completely cover their other clothes; out of doors, except on short walks, they dress alike in black, with uniform hats of some unobtrusive colour. There are various other little restrictions which would seem to us more appropriate to a boarding-school than a college, but it must be remembered that these girls are younger than most English students, sixteen being the usual age at which they begin their training, and also that in France girls of this age are

allowed less liberty than in England, so that they probably do not feel the irksomeness of such regulations so keenly. At any rate, the hard work and rigorous discipline seem to have no adverse effect on their health and spirits, for, judging from appearances, they are as cheerful and capable of enjoying life as any of their fellow-students in this country.

SECONDARY EDUCATION IN VICTORIA.

[BY A CORRESPONDENT.]

EDUCATION, both primary and secondary, in Victoria is passing through an interesting stage. The State is steadily extending its control over, and interest in, secondary education and following up its compulsory registration laws with large extensions of scholarships systems, new trade schools and technical colleges, and the development of advisory and consultative bodies designed to bring all public education into closer touch with commercial men and manufacturers, as well as with the Melbourne University it so liberally subsidizes. At the end of last year secondary education began to really feel the impulse of new driving forces in the direction of efficiency. A Schools Board was set up, or, more accurately, "a board of school studies, school inspection, and school examinations."

It consisted of the Vice-Chancellor of the University, the President of the Professorial Board, eight representatives of the University, to be appointed annually by the Council; eight representatives of the secondary schools, and two members representative of the business interest of the community, who were to be elected annually by the Council. The Board was to meet twice annually for the conduct of business, or oftener if required. It was to consider

(Continued on page 30.)

THE JOYOUS BOOK OF SINGING GAMES

By JOHN HORNBY.

Crown 4to, 140 pp., 7 Photographs, 2/6 net (Postage, 4d.)

THIS is a work of QUITE UNIQUE INTEREST AND CHARM—one which appeals alike to teachers, parents, and social workers among young folk. It is a collection of the song-games that children never seem to tire of playing. Full directions are given for the traditional ritual of each game; the airs are printed in both notations, and a pianoforte accompaniment is added for each. The ninety-two games in this book include some from France, Germany, Switzerland, and Denmark. Nothing quite like this—the WORK OF AN EDUCATIONIST, MUSICIAN, AND FOLKLORIST—has previously appeared.

LEEDS, GLASGOW & BELFAST.

EDUCATIONAL LANTERN SLIDES

NOW READY.

Our new and very comprehensive Catalogue, of nearly 600 pages, containing lists of **Educational, Scientific, and Travel Slides.**

Such subjects as History, Geography, Art, Natural Science, and Nature Study, are **each** represented by several thousands of slides; and smaller sets are provided for almost every other subject taught in Schools. Literature, Botany, Architecture, Astronomy, Agriculture, Manufactures, Physiology, Bacteriology, Geology, Physiography, and many other subjects are very fully illustrated.

TWO NEW "CLASS-ROOM" LANTERNS

are also described and illustrated; they are specially designed to give the maximum results with a minimum of trouble and expense.

One is for use in Schools where electric light is laid on, and the other for use where no electricity is available.

The new catalogue, "Lantern Slide Catalogue, Part II," will be sent post free to any Educational Authority or Schoolmaster applying.

METHUEN & CO., 36 ESSEX STREET, LONDON, W.O.

all questions relating to school studies, the instruction of and examination of schools and public examinations, besides considering questions relating to conditions for matriculation, and for the admission for degrees and diplomas. It was to prescribe annually all the books and details of subjects for public examinations. These and further powers were conferred on the Board, which had to report to the Council of the University any recommendations it might make.

After six months of strenuous and very valuable work this Schools Board has produced a scheme of reforms which is to be pressed on the State ministry, and is expected, if approved, to revolutionize the secondary schools of this manufacturing State. The reforms came before the Melbourne University Council in the form of a report whose adoption was moved by Prof. Masson. The main clauses are:—

That the Schools Board recommend the University Council to lay before the Government the importance of making early preparation for a system of full inspection of secondary schools, both departmental and non-departmental, in readiness for the institution of a system of school-leaving certificates, under which progressive partial relief will be given from the present burden of external examinations by the recognition of the certificates of the head masters of schools.

That the Inspectors should, subject to the conditions hereinafter set forth, be departmental officers, and the system should be administered by a Chief Inspector of Secondary Schools, specially selected for this work. Inspectors of secondary schools should be University graduates of high standing, and should have had experience in secondary schools of various types. It is advisable that at least one of the Inspectors should be a woman.

The Board further believes that the inauguration of a system of inspection that would command the full confidence of the community would be greatly forwarded if the department could arrange to borrow from within the United Kingdom for a period of two years the services of two experienced secondary school Inspectors, to assist in devising and instituting an effective system and in training Inspectors for this special work.

The Board considers that for the success of this scheme it is essential that the Inspectors should command the full confidence of

the department of the extra-departmental secondary schools and of the University. It asks therefore that the Board, which fully represents all these interests, should be entrusted with the selection and nomination of candidates for appointment as Inspectors and also with the general direction of their work.

With an amendment making clear that the Inspectors must have had experience in teaching in various classes of secondary schools the report was unanimously adopted. The big denominational and private schools have not confidence in Inspectors whose experience is limited to State Continuation Schools, Agricultural High Schools, and the like. Hence the amendment.

While the movements condensed in this report have been fructifying, the State primary education system has been strongly attacked in both *Age* and *Argus* by reason of the unsatisfactory results in the "three R's" exhibited in the pupils passing into business houses, and because a large section of the teachers complain of a greatly congested school program. The Press battle is not over yet, and the caricaturists in the weekly papers continue to make the controversy full of fun. What are called "friveries," i.e., Nature study, plasticine work, raffia work, brush work, &c., are mercilessly satirized; but the net outcome is an admission that some time has been lost to non-essentials which might usefully have been devoted to arithmetic. On the whole the new education program has stood the test of a vicious and ably stage-managed attack.

THE PEOPLE'S THEATRE.

MR. WILLIAM POEL takes the theatre very seriously as a necessary part of higher education for all classes. People must have amusement, he says, and their amusement should strengthen them for the problems and toils of daily life.

WHAT IS EDUCATION?

By **STANLEY LEATHES, O.B.**,

formerly Fellow and Lecturer in History of Trinity College, Cambridge. Crown 8vo, 2s. 6d. net.

Mr. STANLEY LEATHES, formerly Fellow and Lecturer in History at Trinity College, Cambridge, and one of the editors of the Cambridge Modern History, is now engaged in directing public examinations. He here uses his long and wide experience to treat of education as a whole—physical, moral, spiritual, intellectual; education for business, education for life; education by life, education by the State; the education of all, of the many, of the few.

DUSTLESS AND HYGIENIC SCHOOLS

On all School, Laboratory, &c., Floors and Linoleums of every description

USE FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

EARLY in the XMAS VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE,

and is strongly recommended by Medical and other expert authorities.

It costs little, and is easily applied. Not sticky—the ordinary daily dry sweeping alone required—scrubbing being optional.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only **during each sweeping** (without sprinkling of any kind), but **also throughout all the intervening periods**—which is even of **greater hygienic importance**.

"Florigene" also saves time and labour.

"Florigene" has been used for many years on the floors of The Royal Naval Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies with approval.

MABIE, TODD & CO., 79 & 80 High Holborn, London, W.C.

Evidently there is great need for an awakening of the ordinary English mind, so that men of all ranks may take a wider outlook upon their responsibilities. A recent play by Eden Philpotts allows the curtain to be rung down as though the tragedy or comedy (whichever it may be) were finished at the very moment when the real tragedy of the situation arises. An undetected murderer has shrunk from confession and allowed an innocent man to be accused and convicted. He is nerving himself to make the tardy avowal when he and his wife hear that the victim has committed suicide. Here the play stops, as though this suicide absolved the murderer, so that he and his wife may live on in happiness henceforth. To all right-thinking people with real hearts in their bodies the tragic tension of this situation is unbearable, and the play only now approaching its crisis. The fact is that all of us, both as spectators in the playhouse and as actors in the real world, need to be reminded and helped to think out the due consequences of our acts, and need to be taught not to rest satisfied with letting events just follow one another as though without any chain of cause and effect linking them together.

The easy frivolities of our theatres have much to do with the weakening of the national imagination and conscience. And it is futile to expect any serious reform while theatrical matters are left to the irresponsible action of supply and demand under the artificial stimulus of commercial management, with no wider aim than securing rapid profits by sensationalism. For the theatre to become of real value as a means of mental stimulus to all kinds and conditions of men it is essential that the charges for admission be low. This can only be secured by a subsidy sufficient at least to provide the building and to guarantee a living wage to the actors. Whoever visits Germany may easily see that the theatre not only may be, but actually has there become, a mental stimulus to all classes of society. Hamburg has not more than one-sixth the population of London, yet in a single week Mr. Poel found there seven different plays of Shakespeare and five great

German classics. We shall not see as much dramatic art of the highest kind in a whole winter in London. To do true honour to the memory of Shakespeare we do not need a gigantic building, but rather a great company of students and exponents of his art, his wisdom and his spirit. They should be provided by the authorities with an adequate building, and in return for their subsidy should undertake on the one hand that the great classics of the language never lie neglected, and on the other that seats for all parts of the house be sold at prices so well within the reach of the ordinary citizen that even a workman's family might without extravagance visit the theatre every week or every fortnight. Only by such a People's Theatre can we hope to raise the tone of the amusements of our sovereign people, and through this to strengthen our national power for coherent thought and effective work.

This was the substance of Mr. Poel's recent lecture to the members of the Schools Musical and Dramatic Association.

J. C. M.

THE debate on the pronunciation of Latin was a curious revelation of the idiosyncrasies of head masters. Dr. James, of Rugby (as Mr. Costley White informed us), ordered his staff to adopt the reformed way, adding candidly that he did not mean to practise it himself. Mr. Alington, at Shrewsbury, continued to use it, though he knew it to be a mistake. Dr. Lyttelton, at Eton (as Dr. H. B. Gray puts it), was in the position of a man who leads his horses to water but cannot induce them to drink. An opposite type (not mentioned at the Conference) was a London head master who, on his appointment before taking office, issued a circular to his staff informing them that the new pronunciation would henceforth be adopted in the school, and enclosing a copy of the authorized rules which they were instructed to master in the holidays.

THE Montessori Society of the United Kingdom have requested us to announce that Dr. Montessori will conduct in Rome a theoretical and practical training course on her method from February 23 to June 30. The tuition fee for the course is £51.

WRITE FOR COMPLETE LIST.

London: SIR ISAAC PITMAN & SONS, Ltd.
1 Amen Corner, E.C.

MESSRS. T. C. & E. C. JACK have pleasure in announcing that they have now completed the issue of the

CHISHOLM READERS

An entirely new Series of Literary Readers, edited by LOUEY CHISHOLM, Editor of the famous

TOLD TO THE CHILDREN

Series and **The Golden Staircase**, known in all the Schools. Over TWO MILLION volumes have been sold of this Editor's books.

The Journal of Education says of her: "An adept in child language."

DISTINCTIVE FEATURES

OF THE

CHISHOLM READERS

The special features may be briefly summarized as (1) Variety of subject; (2) Varied vocabulary; (3) The language generally simple and clear; (4) the subject matter of special interest to children and likely to stimulate curiosity and the imaginative faculties; (5) Poetry suitable for reading aloud.

NEXT TO THE SELECTION of the matter, THE STYLE and SIZE OF TYPE are most important. This matter was discussed by the British Association in 1912, and their recommendations are adopted in these Readers so far as consistent with the requirements of the Schools. Dull-surfaced paper has been used. ILLUSTRATIONS.—The British Association disapproved of the half-tone block ("line blocks from pen-and-ink drawings are preferable to half-tone blocks"). Line blocks are accordingly used here; and the Publishers venture to think that never before has such a charming series of illustrations been included in a series of Readers. The COLOURED PLATES (8 in each book) form a quite unique series by some of the most eminent illustrators of Children's Books of the present day, including Walter Crane, Katharine Cameron, Harry Rountree, W. Rainey, and W. B. Robinson.

The Publishers have prepared a series of specimen pages and illustrations and a full List of the Contents of each volume, and will be glad to send this post free on receipt of post card.

Book I, 144 pages, 10d.; II, 176 pages, 1s.; III, 208 pages, 1s. 3d.; IV, 240 pages, 1s. 4d.

"An excellent course of arithmetic."—*Journal of the Assistant Masters' Association*.

"Quite admirably suited for its purpose."—*London Teacher*.

Chemistry, Junior By R. H. ADIE, M.A., B.Sc.

Second Edition. 2s. 6d.

"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine*.

Chemistry, Junior Practical. By H. W. BAUSOR,

M.A., late Scholar of Clare College, Cambridge. 1s.

The experiments consist of simple observational work and easy quantitative measurements, described in full detail.

Chemistry, Preliminary. By H. W. BAUSOR, M.A.,

1s. 6d.

"It is an attractive little book, likely to find favour in many quarters."—*Pharmaceutical Journal and Pharmacist*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc.

2s. 6d.

The object of this book is to combine simplicity of treatment with logical accuracy, and thus to develop the full educational value of the subject.

Heat, Junior. By J. SATTERLY, D.Sc., M.A. 2s.

"An excellent little volume."—*Educational News*.

"Affords a remarkably clear exposition of the main principles of the science such as is required by elementary students."—*Secondary School Journal*.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc.

Fifth Edition. 2s. 6d.

"The book possesses all the usual characteristics and good qualities of its fellows."—*Schoolmaster*.

Mechanics and Physics, An Introductory

Course of. By W. M. HOOTON, M.A., M.Sc., F.I.C., and

ALFRED MATHIAS. 1s. 6d.

"Teachers who have to teach these subjects without Algebra will be glad to note so simple and cheap a manual for their classes."—*Guardian*.

Sound and Light, Junior. By JOHN SATTERLY,

D.Sc., M.A. 2s. 6d.

"In this book the pupil is encouraged to experiment as well as to think for himself, and his way is made plain by careful explanations and good illustrations."—*School Guardian*.

LANGUAGES, HISTORY, AND GEOGRAPHY.

English Composition, Junior Course of. By

E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—*Education*.

English Course, Preliminary. Including Gram-

mar and Composition. By A. M. WALMSLEY, M.A., late Senior English Master at Middlesbrough Boys' High School. 1s. 6d.

"An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. Unnecessary matter is excluded, and the author has kept in view the real aim of grammar, namely, 'the production of good English.'"—*Athenaeum*.

English Grammar, with Parsing and

Analysis, Junior. By A. M. WALMSLEY, M.A. 1s. 6d.

"A simple and satisfactory grammar which avoids most of the superfluity of naughtiness of the old grammarians."—*The Journal of Education*.

English Grammar and Composition, Junior.

In One Volume, 2s. 6d.

French Course, New Junior. By G. A. ROBERTS,

M.A., Senior Modern Language Master, Royal Masonic School, Bushey. 2s. 6d.

"The short extracts are generally well chosen. With a capable teacher we have no doubt that this would prove a useful textbook."—*The Journal of Education*.

French Course, Preliminary. By H. J. CHAYTOR,

M.A., Head Master, Plymouth College, and A. G. TRUELOVE, B.A., Oxon., Modern Language Master, Plymouth College. 1s. 6d.

"This elementary course supplies an excellent first-year's work, well arranged on systematic lines, with due regard to the advantages of the *Direct Method*, and also to the necessity for thoroughness in the acquisition of the language."—*Athenaeum*.

French Course, Direct. By H. J. CHAYTOR M.A.,

1s. 6d. With Vocabulary (French-English), 2s.; Vocabulary (separately), 6d. net.

"Mr. Chaytor is a teacher of experience and his book does him credit."—*School World*.

French Reader, New Junior. By J. P. R.

MARICHAL, L. ès L., Senior Modern Language Master, Secondary School, Southend, and L. J. GARDINER, M.A. 2s.

"Well-selected extracts in prose and poetry."—*Schoolmaster*.

Geography, Junior. By G. C. FRY, M.Sc. 2s. 6d.

An elementary textbook of Physical and Descriptive Geography.

"The diagrams are bold and convey definite visual instruction directly illustrating the text."—*Education*.

Geography, Preliminary. By E. G. HODGKISON,

B.A., Assistant Master of Crewe County School. 1s. 6d.

"This book bears the stamp throughout of the skilful practical teacher."—*Teachers' Times*.

History of England, School. By M. E. CARTER,

Honour School of Modern History, Oxford. 3s. 6d. Also in Three Parts as follows:—(1) To 1603; (2) 1485-1714; and (3) 1660-1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Latin Course, New Junior. By J. V. THOMPSON,

M.A., Senior Classical Master, Strand School, and L. M. PENN, M.A., Classical Master, Beckenham County School. 3s. 6d.

"Bears the hall-mark of practicality that appears on all Messrs. Clive's educational books."—*Guardian*.

Latin Reader, New Junior. By A. J. TATE, M.A.,

Assistant Classical Master, Owen's School, Islington. 2s.

"Mr. Tate has shown great judgment in the extracts he has chosen."—*Book-seller*.

TEXT-BOOKS FOR THE OXFORD & CAMBRIDGE SENIOR LOCAL EXAMINATIONS.

LANGUAGES, HISTORY, AND GEOGRAPHY.

A SENIOR COURSE OF ENGLISH COMPOSITION.
By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at
Luton Modern School. 2s. 6d.

SCHOOL HISTORY OF ENGLAND. By M. E. CARTER,
Honour School of Modern History, Oxford. 3s. 6d.
This book is also published in three parts as follows:—
Part I.—To 1603. 1s. 6d. **Part II.—1485 to 1714.** 1s. 6d.
Part III.—1660 to 1910. 1s. 6d.

EARLIER HISTORY OF ENGLAND (TO 1485). With
Biographies, Maps, and Plans. By C. S. FEARENSIDE, M.A.
2s. 6d.

MODERN HISTORY OF ENGLAND. With Biographies,
Maps, and Plans. By C. S. FEARENSIDE, M.A.
Part I.—From 1485 to 1714. 2s. 6d. **Part II.—From
1688 to 1901** (with a concise Introduction down to 1714). 2s. 6d.

SENIOR GEOGRAPHY FOR 1914-15. Including Prin-
ciples of Physical Geography, the British Isles, and Europe.
By G. C. FRY, M.Sc. 2s. 6d.

SENIOR FRENCH COURSE. By Professor WEEKLEY,
M.A., and C. GILLI, B.A. 3s. 6d.

SENIOR FRENCH UNSEENS. By L. J. GARDINER,
M.A. 1s.

SENIOR FRENCH READER. With Notes and Vocabu-
lary. By R. F. JAMES, B.A., French Master at Welling-
borough Grammar School. 2s. 6d.

SENIOR LATIN COURSE. By A. J. F. COLLINS, M.A.,
and A. ROBINSON, B.A., Wolverhampton Grammar School.
3s. 6d.

SELECTIONS FROM LATIN AUTHORS (Senior Local
Edition). By A. F. WATT, M.A., and B. J. HAYES, M.A. 2s. 6d.

LATIN COMPOSITION. By A. H. ALLCROFT, M.A., and
J. H. HAYDON, M.A. 2s. 6d.

MATHEMATICS AND SCIENCE.

THE SCHOOL ARITHMETIC (Senior Local Edition).
By W. P. WORKMAN, M.A., B.Sc. 3s.

THE SCHOOL GEOMETRY. By W. P. WORKMAN, M.A.,
B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

Also in Two Parts as follows:—

Part I.—Covering Euclid I, III (1-34), IV (1-9). 2s.

Part II.—Covering Euclid II, III (35-37), IV (10-16), and VI. 2s.

SENIOR BOTANY. By F. CAVERS, D.Sc., F.L.S. 4s. 6d.

SENIOR CHEMISTRY. By G. H. BAILEY, D.Sc., Ph.D.,
and H. W. BAUSOR, M.A. 4s. 6d.

SENIOR HEAT. By R. W. STEWART, D.Sc., and J.
SATTERLY, D.Sc., M.A. 3s.

SENIOR SOUND AND LIGHT. By R. W. STEWART,
D.Sc., and J. SATTERLY, D.Sc., M.A. 4s.

SENIOR MAGNETISM AND ELECTRICITY. By R. H.
JUDE, M.A., D.Sc., and J. SATTERLY, D.Sc., M.A. 5s.

prepaid rate.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each
8 words after, 6d.; *prepaid rate.*

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

*If a receipt is required for an advertisement under 10s., a post card or a
stamped envelope must be enclosed.*

[Advertisers are reminded that "Letters addressed to INITIALS or to
FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post
Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—
"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE
HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C.
should be made payable to WILLIAM RICE; Orders and Cheques may be crossed,
"The London City and Midland Bank, Ludgate Branch." *Postage stamps can
only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad,
stating full name and address of the sender; and all Foreign Money Orders
must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE NEW REGISTER.

LAST month we were able to report that the Register of
Teachers was an accomplished fact, and before this
month is out, to judge from the applications already received,
at least four thousand teachers will have been enrolled on the
new Register. The total of entries under the old Register
during the four years of its existence was only eleven thousand,
for the ninety thousand certificated teachers inscribed in
Column A, without payment and against their will, cannot be
reckoned. The old Register was, from its inception, fore-
doomed to failure. It was framed by the Board of Education
without consultation with teachers, and its Council were an
administrative department of the Board with no power of
altering or amending the regulations under which they worked.
The foundations were so rotten that the Government were
well advised to end it rather than attempt a reconstruction;
but the services of the distinguished men and women, several
of them now departed, who "saw much but were powerless to
act," and, to use a vulgar phrase, made the best of a bad job,
should not be forgotten. The new Council have already
profited greatly by their spade-work in framing the Conditions,
and will profit still more when these conditions have to be in-
terpreted and applied to individual cases by the Secretary and
Committees of Council.

The new Council start with a clean slate and a perfectly
free hand. The Board of Education, having settled its con-
stitution and guaranteed its finances for the first three years,
has, so to speak, launched it as a privateer with letters of
marque. But, as the Chairman (Mr. Acland) has repeatedly
admonished the Council, this sanction may be withdrawn
when the present Council go out of office, and the
validity of the Register, if not its very existence, depends
on the good will of the Board of Education. After endless
delays and abortive schemes, Sir Robert Morant's require-
ments have been satisfied and a Council has been established

"representative of the whole teaching profession." In his famous memorandum he added "irrespective of and apart from all questions of the kind of register to be produced." The Council are on their trial, and it still remains for them to show that they can produce a Register that includes the bulk of competent teachers and excludes no competent teachers who seek admission, and also that, when the permanent conditions come into force, no incompetent teacher will gain admittance. Then we hope and trust that the Board will give to the Register their final sanction by requiring that in all schools recognized by the Board and in receipt of Government grants, at first in proportion to the staff and eventually all the staff, shall be registered teachers. This will constitute a far more effective sanction than that which the first Bills for registration sought to impose by a clause prohibiting non-registered teachers from suing for fees in a court of law, and it will stamp all untrained teachers as unlicensed practitioners.

Whether or not the Registration Council fulfil this aspiration, and commend themselves to the Board of Education, their labour will not be in vain, for they have proved for the first time that English teachers can co-operate as a united profession. Sir William Anson is pleased to mock at "unification" as one of those catchwords that the educational expert loves, and sees nothing in "the unification of the teachers' profession" but a grandiose method of telling us that every teacher will now find a place in one list; but we trust the larger hope, expressed by Sir J. D. McClure, that the Council will become "the recognized mouthpiece of professional opinion and the true Advisory Council in all matters affecting education."

The Council have wisely recognized training as the distinctive mark of a learned profession—the symbol that every candidate, whatever his attainments or other qualifications may be, must produce before he is admitted to the Guild. We regret that University teachers are excepted, and in the case of specialist or technological teachers it may be some years before the test is rigidly enforced. But in the case of all other incipient teachers the five years of grace are sufficient time to enable them to qualify in this respect, and we doubt not that the wholly inadequate provision for training, especially for men-teachers, will in the interval be made good. The demand will create the supply, and the Board of Education, who have for years preached the necessity of training, will be forced to show their faith by works and allot grants for the training of secondary teachers on the same scale as those that elementary teachers now receive.

Instead of reproducing the Conditions and Forms of Application (which can be obtained from the Secretary of the Council, 2 Bloomsbury Square), our readers will doubtless prefer that we should summarize them with some running comments. Every possible regard has been shown to existing interests. Up to December 31, 1918, the only qualification imposed is experience. Any teacher who has attained the age of twenty-five can claim to be placed on the Register on producing evidence of five years' whole employment or ten years' partial employment in teaching, provided that two of these years have been spent in one school or institution or under one governing body. A year of professional training may count as one of these five years. The certificate of experience must, it is true, be accompanied by evidence satisfactory to the Council that the applicant has shown fitness for the teaching profession, but the form to be filled in by a head teacher or magistrate is of a purely negative description: "I certify that I know nothing in A. B.'s moral character that renders him unfit for the teaching profession." The Council have adopted the policy of the open door, and the only class of teachers who can complain that they are shut out are private tutors and governesses. Whether such establishments as tutorial colleges and schools for shorthand will be recognized remains to be seen. There has been no attempt at starting to separate the tares from the wheat, and for the next five years all the Register will attest is that the registree is not a notorious evil liver, and has so far satisfied his employers as to retain one post for at least two years. Yet most of us must know by sad experience of teachers, even in schools of repute, who

could not teach; learned men whose classrooms were a bear-garden; and ignorant athletes retained for their services on the cricket-field.

As with the Medical Register, there must be years of transition, and it is far more important to inquire what the Register will be like under permanent conditions. The standard of qualification is distinctly higher than under the old Register. Under it there was no minimum age, and one year of experience, plus proof of ability to teach, sufficed. In future, five years of experience will be required of all. Certificated teachers will be admitted as under Column A, but they will be entered alphabetically and pay the guinea fee like the rest. On this there are only two remarks to make. That "Acting Teachers," recognized as such by the Board, should be excluded is an anomaly, and the group of Elementary Teachers is pressing, not for their admission by the Council, but for their abolition by the Board as the logical conclusion. Secondly, Mr. Cary Gilson, in his *communiqué* to the *Times*, regrets that no higher test than the Government certificate was imposed, and reminds us that in all their *pourparlers* with secondary teachers the N.U.T. had expressed their willingness to accept any standard of attainment, however high, provided the invidious classification by employment were removed. He would have insisted on a University degree or its equivalent. The answer is that at present not 1 per cent. of elementary teachers have graduated, and when, as we hope, graduate elementary teachers are as common in England as they now are in Scotland it will be time for the Council to raise the qualification. From specialist teachers a University degree can never be exacted.

For secondary teachers it may be said roughly that a University degree will be a *sine qua non*. Under the old Register various equivalents were admitted, and it is possible that some may still be added in subsequent Regulations of the Council. In administering this Condition, we foresee many nice points that the Council will have to determine. Will colonial or foreign Universities be approved by the Council? As at present worded, the Regulations would exclude a woman who had passed a Final Honours School at Oxford but had not taken the Preliminary or Moderations, and yet it would apparently accept an L.L.A. of St. Andrews. And there is a graver difficulty. Kindergarten teachers are grouped under secondary teachers, but even fewer of these than of elementary teachers can be expected to attain a degree, and apparently they will be compelled to register under the conditions that apply to the technological group.

The condition of training is explicit. Certificated teachers are, *ex vi termini*, trained; and of all secondary teachers there will be required a full year's course of training in the principles and methods of teaching accompanied by practice under supervision. It will be seen that this clause may admit student teachers in recognized schools, and we hope that the Council will be on their guard against soft options—the student teachers of the old regime, whom Mr. Lyttelton found "a great convenience." We regret that University teachers are to be exempted from training. We have not space now to argue the question, but may point out one anomaly that will result. Half the teachers in London training colleges are recognized teachers of the University of London, and will be able to claim this exemption. This is as absurd as the regulations of the old Register, which admitted Heads of recognized schools as such, and under which three joint Head Mistresses were enrolled who had neither degrees nor training.

Of the three conditions, the last, experience, is the one that will most exercise the Council. The five years of service must have been passed under conditions "approved by the Council," but it is probable that at the present moment there are in England more private than public secondary schools, and of these (except the bare hundred who have voluntarily submitted themselves to inspection) the Council have, and can have, no official cognizance. Many of them are doubtless as efficient as any public school, but general repute is not a sufficient basis for a quasi-judicial sentence, and, even should the Government pass a measure requiring all schools to submit themselves to a census, some years must elapse before

the universal inspection that it entails is completed. The abortive inspection that under the old Register the Board undertook of schools desiring to be "recognized" for the purpose will not be forgotten. To put a test case. The average salary of assistant masters in grant-aided schools is £168. Will the Council approve a private school which declines to make a return of salaries, or one in which the average salary of the staff is under £100?

We have only glanced at some of the problems that the new Register suggests, and must leave the Specialist Group, which presents the most intricate of all, for another article.

We append a selection of the queries most frequently addressed to the Secretary, together with the official answers.

1. Is the fee payable more than once?—The fee of one guinea is a single payment and not annual.

2. Why must the Certificate of Registration be returned once every nine years for renewal?—Because this is the only means by which the names of deceased teachers may be removed periodically from the Register.

3. Are teachers who were registered in Column B of the former Register entitled to be transferred to the new Register automatically and without payment?—No; the new Council is constituted in a manner entirely different from the old one, and the Board of Education assumed responsibility for the repayment of all fees paid to the former Council, provided that application was made before March 1, 1913.

4. Must the Certificate of fitness on Form B be filled in by the Head Teacher?—Yes; this certificate is intended to furnish evidence not only of moral fitness, but also of experience. The signature of any member of the governing body of a school or of any magistrate will be accepted.

5. Will the Register be published?—Yes; it is hoped to publish not later than the autumn of 1914 a volume containing the names of all registered teachers in one column and in alphabetical order, with a short statement of attainments, training (if any), and experience of teaching. This volume will be revised and published annually.

6. Can former teachers who have now retired come on to the Register?—Yes, provided they have had the required period of experience under accepted conditions. In several cases ladies who were formerly teachers and now are married are applying for registration as a precaution in the event of their being left widows and compelled to take up teaching again.

7. Is the Register open to teachers in Scotland and Ireland?—Yes, provided they have had the requisite period of accepted experience.

8. Is it necessary that applicants for registration should send up their Board of Education Certificate?—It is desirable, but not absolutely necessary provided the number of the certificate be given.

9. Is it necessary to send a certificate signed by the Head of the training college?—No; the Board of Education Certificate covers this.

observations it is based, and how far the results form a valid basis for an educational system. Here we are met with a difficulty at the outset, for the deductions of Lombroso, Giovanni, and Niceforo are not assessed by English writers at the same value as that which is assigned to them by their own countrymen, while the education in modern elementary schools stands in marked contrast with that which appears to obtain in Italy. Let us take the following quotation as an example:—

Physical beauty constitutes in itself a class privilege. This child, weak in mind and in muscular force when compared with the child of wealth, grown up in a favourable environment, shows less attractive manners because he has been reared in an atmosphere of social inferiority . . . he fails to obtain the encouragement of praise and high credit marks that are lavished upon stronger children who have no need of being encouraged. . . . Another child, living in an agreeable environment in the higher social circles, possesses all the physical attraction and grace that render childhood charming . . . this child is destined to reap a harvest of praise and rewards; the teacher, egotistically complacent over the abundant fruit gathered with so little effort, and the moral and æsthetic satisfaction derived from the fortunate pupil gives him unmeasured affection and smooths his whole way through school.

Yet, later on in the volume (page 64), the author attributes physical beauty not to the environment, but to the result of hybridization, and states that "in the human race we have an experiment already accomplished which actually shows us the æsthetic triumph achieved in the region where the races have for the greatest length of time been crossed and re-crossed." By what canons of artistic beauty these perceptions are judged we are not told, but we gather that "beauty" is considered as of the nature of a Mendelian dominant, for "the germinal potentialities that contain beauty and strength seem predestined to that predominance which will achieve the triumph of life in the individual" (page 67). Again, we find Dr. Montessori prepared to predict the character of the individual from the proportionate length of the limbs to that of the body (page 75), and to base thereon a regimen which shall obviate these morbid predispositions. Thus, the brachyscelous, or short-limbed type, is "a hearty eater . . . he will select a well spread table as his favourite spot for lingering. Whatever elements of the ideal the world contains will escape the attention of this type of man, who is far more ready to understand and engage in commerce, which leads by a practical way to the solution of the material problems of life." The fate of the macroscelous person is still more discouraging. "We can almost see this man with pallid, hollow cheeks and narrow chest, nervous, incapable of steady productive work, and prone to dream over empty visions of poetry and art. The man of this type is quite likely to devote his entire life to a platonic love, or to conceive the idea of crowning an ideal love by committing suicide" (page 76). It may comfort those who belong to this type of humanity to know that the majority of parasitic criminals—thieves, for example—are macroscelous, while murderers and criminals of violent character belong to the short-limbed group.

One more example will suffice: our characters are to be judged by the position in which we carry our heads (page 266).

It is not the vain man, or the proud man, or the dreamer, or the bureaucratic official whose head assumes this involuntary horizontal level that is characteristic of the most profound sentiments known to humanity; persons of such type hold their heads slightly raised and the line shows a slight backward slant. The man who is depressed and discouraged, the man who has never felt the deep, intimate and sacred thrill of human dignity has on the contrary a more or less forward slant in the psychological line of orientation.

We may well cry, Hold, enough! It may be urged that the book must be judged as a whole, and that it is unfair to pick out individual statements and hold them up to ridicule, yet the same complete lack of scientific discrimination which is exemplified in these extracts is apparent throughout the book, which, it must be remembered, is intended as a sober scientific treatise upon which is to be raised a new system of philosophical education! The book is a strange medley of similar pseudo-scientific generalizations and loosely connected statements, interspersed with wearisome philosophical disser-

REVIEWS AND MINOR NOTICES.

Pedagogical Anthropology. By MARIA MONTESSORI.
Translated by FREDERICK T. COOPER. (14s. net. Heinemann.)

Hero-worship sometimes produces unexpected results, and it would at the first glance appear hardly reasonable to assign to hero-worship the production of a book upon anthropology. Yet it is to this motive that Mme Montessori's latest publication owes its origin. According to the preface it purports to be the notes of her four years' course of lectures diligently preserved by an admiring student, while the authoress, in her turn, lays her work at the feet of Prof. Sergi as a token of her indebtedness to his influence and teaching. Yet this method of book production has its drawbacks, for it renders the labour of assessing the work at its proper value an exceedingly difficult task, especially as it appears in the guise of a translation. Pedagogical anthropology is defined as a *method* which systematizes the positive study of the pupil for pedagogical purposes with a *view* to the establishment of philosophic principles of education. We may, therefore, attempt to determine how far the method is sound, upon what scientific

tations. Nor do the plates of illustrations help to dispel this unsatisfactory impression. It would have been an easy matter to have made use of actual photographs in place of the blurred reproductions which do duty for them. In the whole method of treatment there is something strangely medieval; for the ponderous tome, the portrait of the author, the unqualified acceptance as authoritative of the *ipse dixit* of the master, and the prolixity of the arguments are all strongly reminiscent of the age of the Schoolmen.

There is, at the present time, a real need for a book which shall bring to the aid of the teacher, in a concise and clear-cut form, the results of the labours of workers in cognate fields of knowledge; but for this we have still to seek.

The New Schoolmaster. By "FOURTH FORM."
(Smith, Elder.)

There is no copyright in "The Schoolmaster" as a title. "Fourth Form" is even less likely to be confused with Mr. A. C. Benson than was Mr. Benson with Roger Ascham. There is this in common between the authors, that all three are reformers. Ascham's aim was to commend a more excellent way of teaching Latin. Mr. Benson, just liberated from the bondage of the fine old fortifying classical curriculum, pointed out how it sacrificed the many for the sake of the few, and he preached a new humanities founded on English, in place of Latin and Greek. Mr. Benson drew his experiences from a single school, and that the most conservative in all England, and his experiences were mainly founded on these. "Fourth Form" takes a much wider range. He is, indeed, an acting master in a public school, and teaches, or has taught, a form in the lower division of the school; but he has inspected other English schools and has studied on the spot the educational systems of Germany, Switzerland, and Italy. His prophecy is of no private interpretation, and, if the name of his school were revealed it would not affect his arguments. Most of the problems that face the secondary teacher of to-day are discussed, and everywhere the author shows independent thought, balanced judgment, and literary skill. Where so much is original and attractive, it is hard to pick and choose, but we may pass over those chapters that have appeared in our own columns and under "Schools and Scholars" in the *Morning Post*. Discussing what, for brief, we may call the Modern Side question, he points out that, in pitting ancient against modern learning a false issue is raised. The real distinction to draw in determining the curriculum is between boys who have linguistic and literary ability and those who have not. To turn boys who have failed in Latin and Greek on to French, German, and English is an absurdity.

Training is dealt with only in passing, but there is the shrewd observation that the stoutest opponents of training are young classical masters in the public schools. They have not learnt, like the wiser of the elders, the futility of traditional gerund grinding. They are, many of them, "virtuosi, men whose scholarship is valued as a second string to their athletics."

The Board of Education's scheme of Student Teachers is less severely criticized than we should have expected, but Mr. Lyttelton's commendation that he had found them a great convenience is quoted as a timely warning of the uses to which which they may be put.

"The head masters of our public schools are not as a whole a thoughtful race." The reason is that with their multifarious duties they have no time to think. They should still do some teaching, if only to get to learn their Sixth Forms; but their place is on the box, and it is no business of theirs to help to pull in the traces.

But neither the supervision of head masters, however competent, nor external examinations are a sufficient test of the goodness of a school, and we are driven to the conclusion that universal State inspection is inevitable. The great public schools are beginning to submit themselves voluntarily to inspection, and private, including preparatory, schools will have to fall into line on pain of extinction. Now that all the dust and passion raised by the Holmes Circular are laid, one

lesson remains which the Board of Education would do well to take to heart, that Inspectors must have served their apprenticeship in schools of the same class as those that they will be called upon to inspect. With this proviso there need be little fear of departmental tyranny and red tape. "There is plenty of scope for individuality with the limits of an organic system."

On the question of compulsory Greek it is not easy to find anything new to say, but the favourite dilemma of the Grecians is well met. To the clever boy who can win a scholarship in science or mathematics Little-go Greek presents no serious difficulty, but it interrupts his proper studies for the last six months of his school life and is an irritating nuisance. To the average boy with no turn for languages who is destined for the University it is a formidable barrier that can only be surmounted by years of dull plodding or by help of the crammer, and creates in him a distaste for all learning. The author, himself a classical scholar, believes in Greek, but, unlike Dr. Rouse and its extreme champions, he holds that Greek is strong enough in itself to need no artificial protection.

The place of Latin in our secondary schools is likewise discussed, and the touchstone applied to it is, Can we show a boy that Latin is a thing worth doing for itself? This is the weak point in Dr. Rouse's reformed method. Latin conversation is confessedly only a means to an end, and the boy cannot fail to ask himself, What good will it do me to be able to pass the time of day or order my dinner in Latin?

We had noted other topics as deserving special attention—the fetish of marks, the English essay, day schools v. boarding schools; but we have reached the end of our tether, and even in this brief résumé said enough to send our readers to the original.

The Case for Co-education. By CECIL GRANT and NORMAN HODGSON. (5s. net. Grant Richards.)

Mr. Cecil Grant has made himself, both by precept and example, a protagonist to the cause of co-education, and a treatise by him and a colleague, setting forth the first principles and the application, is bound to command attention. *Das ewig Weibliche* might have stood for a sub-title. The place of women in history, from primitive man down to women's suffrage, the physiology and psychology of the girl, the intellectual and moral effects of segregation and free intercourse with boys—all these topics are treated fully, if somewhat discursively, and with an unavoidable bias. When we read that in a mixed school the vicious propensities are diminished, perhaps in a single day, by a third, we cannot help discounting the author's prepossessions.

We have lately had occasion to discuss two definitions of education. Here is Mr. Grant's: "The aim of education is to assist, and not to thwart, the natural development of the physical, mental, and moral faculties, and of a will controlling them into conformity with God's will." We would only offer one criticism. "Natural" is what Bentham called a question-begging epithet. It meant one thing to the Stoics, who gave us as the rule of life "naturae convenienter vivere." It meant another thing to Rousseau (assuredly more deserving of refutation than the "grave and judicious Mr. Pellett," who occupies some seven pages), and it led him to his Emile and Sophie. It means a third thing to Mme Montessori, who "is offering us for the first time in the world's history a truly scientific" pedagogics. Whether Mme Montessori would endorse Mr. Grant's definition is another question. In the Case dei Bambini religion takes a back seat and is scarcely mentioned. With Mr. Grant it is the very mainspring of education, the *ultima ratio* to which appeal must be made to secure a child's obedience, the sanction that cannot for a single day be ignored. And without embarking on theology, or inquiring whether God and Nature are here synonymous, we may fairly ask whether man (the parent or the teacher) must not be looked upon as the god of the child, as in the proverb he is the god of the dog. Corporal punishment is stoutly maintained as the natural punishment for boys; that it

is unnatural in the case of girls is taken for granted, yet it was reckoned natural at Sparta, the completest example of co-education in ancient times, and as late as Ascham's days in England.

Where so much solid food is given it is perhaps greedy to ask for more: but the amount of space devoted to America seems to us disproportionate. Whether co-education in the States is in the ascendant or on the decline is a much vexed question on which we cannot enter: but Scotland, where it has obtained for centuries, not only in elementary schools; and Wales, where it is the rule in intermediate schools, concern us more nearly than the States, and of these countries there is not a word; and, to come even nearer home, Bedales, the only English school that can compare with Harpenden, is ignored. Of St. George's itself we would gladly have heard more. We are told—and we have no reason to disbelieve it—that boys and girls live together as a happy family of brothers and sisters, with profit to both the sexes, and that no difficulty arises, in discrimination for games and special subjects; but we should like to see the curricula, the time-tables, &c. "We attach no great value to statistics, and we have never collected any." Yet statistics are the very backbone of science; and the strongest point in Stanley Hall's attack on co-education is his argument from the infecundity of American women graduates, to which the best answer is Mrs. Sidgwick's statistics of Newnham students.

The general impression left upon us by the book is that Mr. Grant has proved his case so far as to show that a boarding school of boys and girls can be conducted with much advantage to the morals and character of both sexes and no apparent intellectual loss—and such educational experiments are invaluable; but he fails to convince us that schools like Harpenden could ever supersede our ancient public schools or become the model secondary school of the future. Arguments as to the equality of the sexes carry us a very little way. Co-education is much more a question of climate, race, and social conditions. What is "natural" to a northern people like the Scotch, or a primitive civilization like the Western States, is abhorrent to the Italian or the Frenchman. For children up to the age of twelve, and for youths and maidens over eighteen, co-education is, at least in theory, a *fait accompli*. For the intervening years we believe that separate schools will continue the rule, and for the cure of sexual abuses, which loom so largely in this volume, we look to the day school.

The Living Past: a Sketch of Western Progress. By F. S. MARVIN. (3s. 6d. net. Oxford University Press.)

To present in a volume of less than three hundred pages, even in the barest outline, the history of Western civilization from Eolithic man down to the age of democracy and of specialized science is a bold undertaking, and the author fairly pleads that the work must be judged as a whole, and not by the parts, each of which may be pronounced by the specialist perfunctory, inadequate, or faulty.

To appreciate the work we must accept the author's standpoint. He adopts Kant's conception of a universal history: "the growth of a world-community reconciling the freedom of individuals and of individual states with the accomplishment of a common aim for mankind as a whole." He holds with Tennyson that, "through the ages an increasing purpose runs," but, unlike Tennyson, he finds the *filum labyrinthi* the clue to progress, not in religion, but in science. Science is used in no narrow sense, and includes ethics, sociology, and economics; but "tools and the man," from the Celt and the Pyramids to the steam engine, is the main thread of the argument, and politics, literature, and art are secondary strands. It is a protest against the doctrine that history is politics in the making. "What popular history of Greece gives any account of the work of Archimedes, or even mentions Hipparchus?" Some of the most approved histories of England allude to Newton only as Master of the Mint. But Mr. Marvin is no evolutionary fatalist; man is ever a master of his fate. "Our moral judgment, though itself arising from an immemorial evolution, will and must at any moment rise superior

to the concrete result of the historical protest." Fundamental questions, the validity of our moral judgments, the relation of ethics to religion and the origins of religion are not touched on.

The main objection that will be taken to a History written on these lines is that it is one-sided and partial, no less than that of Bossuet, who finds the clue in a divinely inspired Church. According to Matthew Arnold, Hebraism and Hellenism are two contending forces in the reconciliation of which lives the hope of future progress; but here the faith of Judaea is dispatched in a sentence at the end of the chapter on the Early Empires as a spark that "did not break out or kindle the West until Greece and Rome had done their preliminary work." Christianity itself is hardly touched upon till we come to the Middle Ages, when it appears as a spiritual force that raised to a higher power the common humanity preached by the Stoics, a compelling passion that inspired Catholicism, eclipsed but not extinguished by Papal aggrandisement.

The author himself has, as we observed, anticipated and in part forestalled this objection. He neither denies nor seeks to minimize the force of religion, but he finds in science a more palpable and unbroken clue to history. His best reply to critics who would accuse him of irreligion is to point to the Envoi. As the high-water mark of civilization, the ripest fruit of the past ages of man, he points to the care and love of children. Like another whose name is barely mentioned, he takes a little child and sets him by us.

The book is provided with a full table of contents and a fairly full index, but we would suggest, as a useful addition, a chronological table. When the reckoning, as here, is mostly by millenniums, it is not easy to synchronize events or even always to fix the century.

The New Encyclopædia. Edited by H. C. O'NEILL.
(7s. 6d. net. Jack.)

The paper wrapper displays graphically the first and most obvious recommendation of "The New Encyclopædia": it is handy, portable, lies flat when open, and can be consulted without stirring from one's armchair by the fire. We need a new word for works which lie half-way between the dictionary and the cyclopædia. The Germans have their *Conversations-Lexikon*, but Messrs. Jack aim at giving in one volume what Myers & Brockhaus give in six or more. It is impossible for a reviewer to do more than sample such a work, and each must select his own subject or subjects as a test—in our case, Education. To the main heading two and a-half pages are devoted, and half of this space is rightly given to England. The turning points since 1870 are clearly indicated, but no mention is made of the Royal Commissions which preceded legislation. It is a mistake to compare French *collèges* with English public schools, as depending on their endowments and fees. It was Froebel, not Pestalozzi, who invented the word "Kindergarten." The weakest part of the article is the bibliography. It names only seven books, all in English, and Sonnenschein's is the only Cyclopædia named. "Universities" is a well compressed article, but we miss any reference to University Extension, and James Stuart is not thought worthy of inclusion. The Encyclopædia is strong in Science and well up to date, but Education is still struggling for a recognized place among the sciences, and it would be too much to expect that its technological terms, many of them fluid and in the making, should be recognized. We shall look in vain for such words as "Specialization," "Vocational," "Registration," "Training," "Direct Method," or "Modern Languages," "Domestic Science," "Handicraft," or "Manual Work." Under "Biographies" Thomas Arnold has four lines, Matthew Arnold thirty-four; Comenius and Thring have each five lines; Mulcaster, Ratich, and Vivès are omitted; and among living educationists we miss W. Rein, H. M. Butler, J. Dewey, Stanley Hall, and M. E. Sadler. This, as we confessed at starting, is a one-sided review; but, to sum up our general impression, it is a work that the teacher will care to possess as a most convenient book of reference. An English Encyclopædia of Education is still to seek.

The Demonstration School Record. No. II. Edited by J. J. FINDLAY. (Manchester University Press.)

The first volume explained the aims and objects of the Fielden Demonstration School and gave merely a few samples of the application. In the five years that have elapsed, the school has grown and developed and it has been closely connected with the

University by the establishment of a Seminar, which combines the staff with the University Faculty of Education. The second volume consists of two parts—essays on principles and accounts of the way in which these principles have been carried into practice, and of the tentative conclusions reached. It deals with every branch of a school curriculum from the age of five to fifteen, and touches on almost every phase of child life. "Nihil quod tetigit non ornavit" would be extravagant praise, but we can testify that there is not a chapter from the editor's introduction to the appendix on the Montessori Method from which even the experienced teacher may not glean something new and find matter for reflection. Among such a wealth and variety of matter it is not easy for a reviewer to pick and choose; but, under "Principles," we would point to the editor's essay on "Work and Motives for Working" as specially worthy of attention. Under "Applications" the account of the Montessori Method as treated in the Fielden School is singularly impartial and judicious. Full justice is done to the originality of the Dottoressa in insisting on the training of the child as an individual without interfering with his spontaneity and freedom of action. In the kindergarten the gardener has played too large a part, and the Fielden infants have profited by the daily free hour allotted to play with the Montessori apparatus. But the limitations of the system are no less clearly pointed out. It may supplement, but can never supersede, the Froebelian kindergarten. A well timed protest is entered against the attempt to exploit the system as though it were a new gospel and to patent the apparatus as though it were a quack medicine.

Practical Suggestions on the Direct Method of Teaching Latin. By R. B. APPLETON. (2s. net. W. Heffer.)

Mr. Appleton is Classical Master at the Perse School, and he gives the results of his experience with pupils in their second and third year of Latin. Two cautions are wisely insisted on. Each teacher must work out his own salvation; the suggestions must not be taken for more than the word implies. The use of nothing but English in the lesson must not be made a fetish. The results, in the form of uncorrected compositions, are an impressive testimony to the Direct Method. The author fails to convince us that the full meaning of a Latin passage can be grasped or tested except by translation. In the typical example (Aen. II, 145 ff.), "miserescimus ultro" is paraphrased "sponte nostra, nullo cogente." "Even," or "actually" in a translation would have shown that a boy had grasped the exact force of the word. So "ediscere" = "dic," and "fas" = "licet."

"Florian's French Grammatical Readers."—*L'Homme à l'Oreille Cassée.* Par EDMOND ABOUT. Edited by A. R. FLORIAN. (1s. 6d. Rivingtons.)

The object of this Series is to combine a reader, a grammar, and a composition book. That grammar should be ancillary to reading all are now agreed, and in the first stages it may be well to teach accidence by a text written for the purpose; but we do not see the advantage of tacking, as here, a lesson on the syntax of the definite article and the feminines of adjectives on to a page of About. By the time that the pupil has reached the stage for reading a French novel he should possess a grammar and a dictionary, if only the small Larousse. The reading, if not the grammar, must suffer by this intercalation. Take the first page of "L'Homme." If he trusts to the vocabulary (there are no notes), the pupil will translate "Léon Renault represented an average man, fair, *rondelet* [not in the vocabulary], and well built . . . A very white neck settled (or cut short) *tranchait*, with his face reddened by the sunburn?" Who were Greuze and Humboldt he must discover for himself.

Grillparzer's Libussa. Edited by GEORGE O. CURME. (3s. net. Oxford University Press.)

This little known posthumous tragedy of Grillparzer serves Prof. Curme as a peg whereon to hang an admirable study of the Austrian dramatist, his life and his works. The play has approved itself by long experience as well adapted for reading in class, but, we take it, rather to the University than schools. It is a beautiful play, fired with lyric warmth and touching the deepest philosophy of life; but it is more subtle and more remote than "Die Ahnfrau," and would appeal only to an advanced highest set in a school. Libussa is an Undine, but the supernatural elements of the legend are eliminated, and she serves only as the type of an ethereal nature, struggling to adapt itself to earthly conditions, to serve humanity, and yet live apart.

A First German Prose Composition. By F. W. WILSON. (1s. 6d. Edward Arnold.)

The plan of this composition book is novel. An English passage of some dozen lines is given, with which the pupil must first familiarize himself; he then turns to the corresponding German exercise, which consists of questions on the subject of the English and a vocabulary of the words required to answer them. Thus, to

"A gentleman had wounded himself slightly; in his fright, he at once sent for the doctor," corresponds "Hatte sich der Herr leicht oder schwer verwundet? Nach wem schickte er in seiner Angst sofort? (der Arzt)." When he has thus thoroughly mastered the vocabulary he is set lastly to the composition. We take it that Mr. Wilson has tried the plan with success on his own pupils at Clifton College, and, though it will be condemned as a rank heresy by the New Methodists, it has much to commend it, and Mr. Wilson has presented it in an attractive form. The passages chosen are interesting, of about the right difficulty for a second or third year in German, and just the right amount of help is given in the way of hints.

Eight Little French Plays for Children. By MADAME DE ISAAC DAVIES. (1s. Cardiff: J. B. Dyer.)

These can hardly be called plays. They are short scenes or dialogues, each of which could be acted in five or ten minutes—a tea-party, a birthday, a game of romps, &c. They are simply written by an experienced teacher, and provide for small children a pleasant interlude or variation on the regular classwork.

The British Empire Universities Modern English Illustrated Dictionary. Latest Edition. Edited by EDWARD D. PRICE and H. THURSTON PECK. (£1. The Syndicate Publishing Company.)

The portentous title of this Dictionary belies the format, which leaves nothing to desire for portability and elegance. The volume might be mistaken for a University edition de luxe of the Bible. We are not informed what previous editions of the Dictionary have appeared, and in the learned monograph of Dr. Foster Watson on "The Origin and History of Dictionaries" no mention is made of any; but, as the names of the monographists appear on the title-page, we may take it that this is the distinguishing feature of the latest edition. The monographs in themselves are all worth reading, but we confess that they seem to us irrelevant to a dictionary which is strictly modern and does not include Chaucerian or even Shakespearean words. Thus, Prof. Quiller-Couch treats in ten pages "Great English Writers," and Prof. Saintsbury expounds his idiosyncratic theories of English metre. A cursory inspection of the Dictionary proper reveals many lacunæ. Four of the words we have used in this notice, without malice prepense, are (if we count the last as a compound) missing. Only three words are given beginning with "irre-"; in Stormonth there are over fifty. We have no quarrel with the omission of compounds where the meaning is clear. No one wants "dog-collar" or "dog-kennel," but "dog's ear" is another matter. Whether derivations should be included is an arguable matter, but in assigning meanings the origins should certainly be followed or at least indicated. Without this, the various meanings of "livery" are simply a medley, and the Dictionary is not, as Sir James Yoxall desiderates, an educational factor. In our own subject the reader will miss any explanation of "secondary education," "public school," "pupil teacher." An excellent feature is the glossaries of technical terms, mostly sports and games, such as cricket, golf, aviation—by specialists. (Why should the "gauge" of an automobile be spelt "guage"?) The illustrations are well engraved, and will doubtless add to the popularity of the work, but they make no pretence to science—stamps, shoes, races of the world. Some are simply picturesque: a village church and "an up-to-date barn," which is nothing but an ordinary cattle-shed.

A Phonetic Dictionary of the English Language. By HERMANN MICHAELIS and DANIEL JONES. (In paper covers, 6s.; in boards, 7s. Berlin: Carl Meyer.)

This dictionary will prove a godsend to foreign students of English, providing them with the same aid for English that Herr Michaelis and Paul Pepys have furnished for French. The ordinary English dictionaries, even when they profess to give the pronunciation, are generally inadequate or unreliable. The name of Mr. Daniel Jones is a sufficient warrant of accuracy, and Prof. Walter Rippmann and Mr. Noel-Armfield have given it their imprimatur. As a matter of convenience we should have preferred the arrangement by ordinary spelling, with the phonetic transcript to follow each word. It is for reading far more often than for conversation that it will be consulted, and it will take a little time to get accustomed to the phonetic order of letters. Proper names are wisely included, but we miss Raleigh, Quiller-Couch, Baden Powell, Gower (often mispronounced by natives), and Cowper, the poet, who rimed his name with "trooper," as did the noble lord. Eugenics is another vexed word that we fail to find.

Composition from English Models. Book II. By E. J. KENNY. (1s. 6d. Edward Arnold.)

To teach composition by imitation is a method recommended from the days of Quintilian and earlier, but most teachers of rhetoric have contented themselves with generalities like Horace's "Vos Exemplaria Graeca," and the difficulty lies in the application. Mr.

Kenny has provided schoolmasters with a series of definite exercises. Some seventy passages from standard authors are selected as models. The notes appended to each direct the pupil's attention to the vocabulary, the arrangement of sentences, and the distinctive qualities of style, and he is then required to reproduce or paraphrase portions, and, lastly, to compose an essay on some cognate subject. The plan is well conceived and, on the whole, well carried out. The exercises might have been better arranged in order of difficulty. For instance, Elia's "Discovery of Roast Pork" is not a good model of narrative for beginners, who will not appreciate the subtle humour or be capable of applying it to the edible potato. Certainly warning notes should have been added. The models themselves are not always faultless and often their peculiar qualities are beyond the reach of the young composer. Thus, in the second passage from Froude, he needs to be warned against the use of exclamations and rhetorical questions in a narrative—warned also that even the youngest should verify his quotations. So, too, in the extract from "The Heroes," by Kingsley, he is rightly called upon to admire the skilful use of "ands," but he needs no less a caution not to link his sentences like bird's eggs on a string of "ands."

The Teaching of English Literature in Secondary Schools.

By R. S. BATE. (2s. 6d. net. G. Bell.)

"A Teacher's Companion to English Literature" would more accurately express the scope of this book. Mr. Bate, himself a classical scholar, lays down at starting that a knowledge of Latin and Greek is one of several notes of an educated man, but a man who is ignorant of his native literature writes himself down an ignoramus. Assuming that English literature is an integral part of the curriculum, he proceeds to sketch in outline a preparatory course for the lower school and a full course of reading for the four last years of school life, with a running comment on the works selected and hints on the points to be attended to by the teacher. The books appear to us wisely chosen, and the ripest scholar will gain some new wrinkles. The number of the hours allotted is not indicated, but we do not think the course is practicable with a less allowance than four hours a week in school and the same allotment of time for home lessons. The scheme raises two fundamental questions, neither of which is here discussed. It follows strictly the chronological order, and the first works to be studied are Early English alliterative poems. Beowulf is read before Chaucer. Secondly, no attempt is made to correlate studies, and we are left in doubt whether language (Anglo-Saxon and Early English) is to form part of the literature lessons. We would commend an introductory chapter on rhythm and metre, with its protest against scanning English like Latin verse; but the author's analysis of specimens seems inconsistent with his theory. The comments on authors are, as we said, most suggestive, all the more so because they are often in the form of interrogations. From some, as is natural, we dissent. Thus, as against the depreciatory remarks on Scott's prose style—"slipshod and even vulgar . . . journalistic phrases and much bad grammar as well"—should be set the study of Scott in Verrall's posthumous volumes.

The Story of the World. A Simple History for Boys and Girls.

By ELIZABETH O'NEILL. (7s. 6d. net. Jack.)

In her nursery "History of England," Miss O'Neill showed that she possessed the rare power of interesting children in genuine history—the pearls, not the mock pearls. In this larger and far more ambitious work she promises Doris, to whom it is dedicated, that all the stories she will read are true stories. We are not sure that this restriction is wise. In a sense, poetry is truer than history, and the best way of representing to a child "the glory that was Greece and the grandeur that was Rome" is to tell him the tale of Troy and the lay of Horatius. Nor is the author quite consistent. Abraham marches into Egypt "drest in a bright scarlet robe," and Sarah has a son when over ninety and dies in her hundred and eighth year. The fiery cross of Constantine wins the battle for the Christians. The first chapter on prehistoric man might well have been omitted. We are still in the age of conjecture, and the discovery of a new skull might any day upset existing theories. To tell a child that many learned men now believe that men are descended from monkeys is, to say the least, misleading. These are small flaws and do not affect our high estimate of the work as a whole. The canvas is not crowded with names or dates, the salient points are seized, and due proportion between the various eras is well observed. Nor are we greatly scandalized by the omission of what we may call the Saharas of history, such as the Chinese Empire (disposed of in a page), or of any allusion to Crete under Greek civilization. We do, however, regret that so little is said of trade and commerce as they affect national history and of the eternal struggle between capital and labour. The volume is profusely illustrated from authentic sources. The full-page plates are

well chosen and some of them beautiful, as the frontispiece from Pompeii wall paintings and the battle-piece by a Japanese artist. The insets in black and white are richly reproduced. The portraits—for instance, of Alcibiades and of Pope Hildebrand—are almost caricatures.

Textbook of Physics. By H. E. HURST, M.A., B.Sc., and R. L. LATTEY, M.A., B.Sc. Vol. I: *Dynamics; Heat.* (205 pp. 3s. 6d. net.) Vol. II: *Sound; Light.* (177 pp. 3s. 6d. net.) Vol. III: *Magnetism; Statical Electricity; Current Electricity.* (258 pp. 4s. net.) (Constable.)

These three little volumes provide a systematic course of study in which the whole range of elementary physics, both theoretical and practical, is treated in accordance with the requirements of such examinations as London Matriculation and Intermediate Science. The work throughout is treated from an experimental point of view, and its most useful feature lies in the prominence given to worked examples based upon the results of actual measurements. Mathematical proofs of the various formulæ employed are expressed without undue complication, being illustrated wherever possible by carefully drawn illustrations. The diagrams of apparatus are of just the kind which the student should be encouraged to draw in his notes and practical work—clear line drawings of the instruments which are most commonly in use. A large collection of examination questions has been compiled, the source and date being appended in every case, and these are appropriately distributed under the subjects of each chapter. Any one of the volumes would form a complete course in itself, but all three are correlated by a system of cross references to the different sections, and could be used together with great advantage. An extraordinary oversight has marred the utility of the indexes. Each volume is paged consecutively, while its index has evidently been prepared on the assumption that the paging recommences with each section. Otherwise no errors have been detected, and the work, which has been well written in concise and simple language, has evidently been carefully corrected in the proofs. As a textbook for the advanced classes of schools and the first-year college courses, it deserves to be widely used.

The Wonders of Modern Electricity. By CHARLES R. GIBSON. (2s. Seeley.)

This is a somewhat abbreviated edition of the author's "Romance of Modern Electricity," an admirable popular introduction to the science, as we pointed out at the time of its appearance.

Insect Life: Its Why and Wherefore. By HUBERT G. STANLEY. (2s. 6d. net. Pitman.)

This book is designed primarily for the farmer, the gardener, and the housewife; but it might be usefully employed in rural schools. It gives in untechnical language the history of common pests, such as the house-fly, the wire-worm, and the blight-fly, and suggests the best means for their extirpation.

(1) *Twelve Boys on a Trawler*; (2) *A Week on the Eddystone*; (3) *Life on a Lightship* By ARTHUR O. COOKE. (Each 1s. 6d. Frowde and Hodder.)

Mr. Cooke has himself trawled, kept the watches on the Eddystone, noted on board the "Gull" the ships that passed in the night. He is a keen observer and a clear expositor. The volumes are well illustrated.

(1) *Some Curious Insects*; (2) *Butterflies and Moths*; (3) *Beetles and Flies*; (4) *Spiders and Scorpions*; (5) *Insect Life in Pond and Stream.* By F. MARTIN DUNCAN and L. T. DUNCAN. (6) *A Little Book about Rocks.* By ANNIE REID. (Each 1s. Frowde and Hodder.)

These pretty little books of natural history are copiously illustrated with bright coloured plates and well drawn woodcuts. They make no pretence at science, but, by picking out the wonders of common objects, excite curiosity and interest, which, as the psychologists teach us, is the beginning of knowledge.

A Day in the Moon. By the Abbé MOREUX. (3s. 6d. net. Hutchinson.)

The Director of the Observatory at Bourges is in the first rank of astronomers, and he has at the same time the gift of popular exposition. There is a suspicion of claptrap in the title which suggests Jules Verne, and it is only "in the mind's eye" that we pass dryshod over seas, leap crevasses forty feet at a stride, and drop rocks weighing a hundredweight down craters like pebbles into a well, in a lunar day—that is, some three hundred hours. The Abbé invents nothing, tells only what he has seen, and draws the inevitable deductions. The effect of the moon on the weather, on vegetable and animal life, are still a *terra incognita*, and here the author reminds his fellow astronomers not to dismiss all superstitions and folklores as old wives' fables. There are more things in heaven and earth than the telescope can reveal. The numerous photographs are

admirably reproduced, and the anonymous translator deserves a word of credit.

The Layman's Old Testament. Edited by M. G. GLAZEBROOK. (4s. 6d.; in two parts, each 2s. 6d. Oxford University Press.)

Canon Glazebrook has attempted to supply the need of the plain man who desires to read the Bible of the Hebrews as a continuous whole, arranged in chronological order, with no commentary and only occasional foot-notes. With this object he has omitted five books—Leviticus, Chronicles, Esther, Lamentations, and the Song of Solomon, and added portions of three apocryphal books—Ecclesiasticus, the Wisdom of Solomon, and the First Book of Maccabees. The text is framed on the Revised Version, but the marginal renderings, in the many cases where they are clearly right and the old text wrong, have been adopted. This part of the work is well done, and rapid readers will appreciate the change. As to the omissions, we do not feel so certain. We regret the absence of that charming rustic idyll, the Song of Solomon, and, more than that, the expurgations in the earlier books. We are not referring to the omission of genealogies or the softening of coarse words; but why should the Song of Lamech, the institution of circumcision, the sin of Onan and of the men of Sodom, the duration of the Flood, Methuselah with his 969 years, and the mysterious Melchizedek go by the board? It is an Old Testament for laymen, not for schoolboys, and they do not want, like Lamartine, a Bible *abrégée et épurée*. The Maccabees is valuable as filling a gap in Jewish history, but it can hardly count as one of the Sacred Books. The historical order, with the Prophets in their right place, is a distinct gain, and it might have been carried further by separating the pre-exilic and post-exilic Psalms. The maps at the end are original and a valuable addition.

Old Testament Stories. Told by THEODORA WILSON-WILSON. Illustrated by ARTHUR A. DIXON. (1s. 6d. Blackie.)

In our last number Bible-teaching in schools was treated at length by Mr. Cradock-Watson. Much that he there says applies to the nursery; in particular, the principle that no child must be taught as true what he will later on learn to be not true. This does not exclude sacred myths, but it does prescribe the way of telling them. The child of five or under will be sure to ask, Did God really walk and talk in the Garden? Did He tell Abraham to kill his son? Did Adam live to be nine hundred and thirty? Did the Ark hold every sort of animal? How would the story-teller answer such questions?

The Bible To-day. By BERTRAM POLLOCK, C.V.O., D.D., Bishop of Norwich. (2s. 6d. Murray.)

The Bishop of Norwich has done well to publish the second part of his primary visitation charge, delivered to his Diocese in 1912. The theme of it is, as he claims, one that commands permanent interest, and must appeal to all alike. What is the place and claim of the Bible to-day upon the minds and hearts of loyal Christians? What difference has criticism made, and how far must its results modify our attitude towards the Scriptures of the Old and New Testaments? The Bishop proceeds to discuss the questions raised in a plain, straightforward and sensible way, and what he says will be a real help to the average layman, and to many of the clergy as well. The new methods of approaching the Biblical records are skilfully and wisely set forth, and it is shown how little real loss is involved. The Bishop justly says: "The New Testament is truly not out of date, nor the Old Testament either; we cannot afford to discard the history, which God directed, of a nation that in its progressive development shewed such an extraordinary instinct for righteousness, fighting its way to a high moral ideal. The spirit of practical righteousness was in the Jewish race so strong that even their legends have a significance which the legends of no other religion possess. And the power of the lesson is enhanced because it comes before us in a history, and is taught in a concrete and not a speculative shape, constantly illustrated by individual lives and characters." While the book does not attempt to set forth any new or original results, it makes a real contribution in showing how the results of criticism can be profitably assimilated by the average intelligent Christian. Among the questions dealt with are the formation of the Canon, the relation of Christ to the Old Testament, the Synoptic Problem, Miracles, the Virgin Birth; and these are discussed wisely and well, and with the spiritual needs of the present day constantly in view. Altogether this is a book which ought to appeal strongly to the average intelligent layman.

Half and Half Tragedy. By ASCOTT R. HOPE. (5s. net. Black.)

In his preface Mr. Ascott Hope lets us behind the scenes, and confesses the increasing difficulty a writer finds in inventing a title that shall fitly describe a volume of short stories. "Cap and Gown Comedy" was an inspiration, but how to find a title to match a companion volume dealing with the more sombre side of school life? The one chosen is perhaps better than any of the rejected alternatives, but it does not suit the first story, a whole tragedy

none the less pathetic because the nexus of the plot dates back to school days. On the other hand, the third story, evidently founded on Mafeking Day at Haileybury, has nothing tragic about it, unless a general caning can count as such. It would be a rash inference, as the author warns us, to infer that Ascott Hope was ever connected with Haileybury, and one of the merits of the book is that it is not, like most recent school novels, a blurred photograph. But, though we cannot "spot" his school, we would lay the odds that he was a home boy at one or more academies north of the Tweed. The longest of the stories, "An Old Friend," is a reminiscence of school life in an academy on the East Coast, veracious as Galt's "Annals," brimming over with genial humour as a Waverley novel, and showing as intimate knowledge of boy psychology as R. L. Stevenson's "Lantern-bearers." There is plenty of rollicking fun, and more than one of the characters is "what nursemaids call a limb"; but, though Ascott Hope relishes a joke as keenly as any schoolboy and never moralizes, he shows clearly that his sympathies are on the side of decency and order, and his comedy never degenerates into buffoonery or pantomime. "Miss Humpty-Dumpty," the delicate crippled old lady, who plays the maiden aunt to the younger boys of a public school, entering into their sports and helping lame dogs over stiles, is an exquisite miniature and a true "Half and Half Tragedy."

A Child's Book of Empire. By ALICE TALWIN MORRIS. Illustrated by CHARLES ROBINSON. (2s. 6d. Blackie.)

A small boy and girl travel round the world, beginning with Canada and ending up with the West Indies, in the company of their father, who is, among other things, a sportsman and a naturalist. The girl records all she sees, and what she is told by her father, in simple, straightforward language. There is no playing to the gallery in the way of light comedy or hairbreadth adventures; but, on the other hand, there is no attempt to interlard a geography or history lesson. It is a pity that the fiction of the two children is not kept up to the end. The pictures are bold and striking.

Pioneers of Empire and Pioneers in Tropical America.

By SIR HARRY JOHNSTON. (6s. Blackie.)

Sir Harry Johnston is at home in most quarters of the globe; he is at once a geographer, an anthropologist, and a natural historian, and he has the pen of a ready writer. In the present volume his chief authority is the volumes of the Hakluyt Society, which he has followed closely in his account of the discoveries of Drake and Raleigh. The first chapter is the most original, dealing with the geology, anthropology, flora, and fauna of South America. The coloured plates are spirited, but somewhat fanciful; but the black-and-white illustrations are really instructive, and there are two good maps. We should have liked an index.

Michael Fairless: Life and Writings. By W. SCOTT PALMER and A. M. HAGGARD. (2s. 6d. net. Duckworth.)

"Only one thing," says Mrs. Haggard, "would have made Michael Fairless more vexed than the publication of the truth about her, and that thing would have been the publication of untruth. So many garbled statements, inaccurate assertions, and pure fictions have appeared about her that it is time for uncertainty to be dispelled." Hence this little volume, written with such sympathy and restraint that no one can regret its publication or feel anything but grateful for learning more of so unique and striking a personality. Those who have not read will assuredly now read "The Road Maker," and those to whom it is familiar will reperuse it with renewed interest.

"Great Achievement Series."—*Heroes of European Nations.*

By A. R. HOPE MONCRIEFF. (2s. 6d. Blackie.)

The title is a misnomer, for the volume is really a series of rapid historical sketches ranging from the seventh century B.C. down to the Battle of Waterloo. If any one were asked to draw up a list of "heroes," it is safe to predict that it would not contain half of the fifty names mentioned in Mr. Moncrieff's Contents. Lycurgus, Solon, Pyrrhus, Nero, Conradin, Philip II, and Washington would pretty surely be absent. The Maid of Orleans seems to have gone astray from the volume announced to follow of "Heroines." The book is assuredly misnamed, but none the less we can heartily commend the simple, straightforward style in which Mr. Moncrieff relates the critical moments of European history.

The Great Victorian Age for Children. By M. B. SYNGE. New edition. Illustrated by FRANK GILLET. (Frowde and Hodder.)

We welcome a new edition of this history, not for children, since it is mainly political, but rather for the middle classes of schools. The narrative is clear and straightforward, but its chief merit, in our eyes, is that it is free from all party bias. We defy the reader to tell from internal evidence whether the author is Liberal or Conservative, a Free Trader or Tariff Reformer, a Unionist or Home Ruler.

When Duty Calls, or Danger. Records of Courage and Adventure for Girls. By various writers. Edited by ALFRED H. MILES. (5s. Stanley Paul.)

These stories are a pleasing variation on the usual type—what we might call the "Othello to Desdemona Tales." Most of these are homely and the courage is displayed in self-denial or altruism. We cannot agree with the editor that courage is always moral. The Nihilist may show courage no less than the Christian martyr, but it is well to impress on girls, and boys for that matter, that it may need no less courage to defy Mrs. Grundy than to lead a forlorn hope.

Godmother's Stories. By Mrs. H. F. HALL. (Nutt.)

The author of "The One Strand River" is the Mme d'Aulnoy of our day. She has produced a new and original fairy book. Taking familiar nursery rimes, such as "Curly-locks" and "Cross-patch," for her texts, she spins round each a romance of witches and warlocks, werewolves and hobgoblins, mermaids and sleeping beauties. She has the incommunicable gift of the born storyteller, and we prophesy that the Andrew Lang of the next century will be found drawing from her treasure house.

Tramp round the Mountains of the Moon. By T. BROADWOOD JOHNSON. (5s. Fisher Unwin.)

The story of Mr. Johnson's travels and missionary work in the kingdom of Toro is of more than temporary interest, and we are glad to have it in a cheap edition. His testimony on the Congo question is specially valuable as it bears on its face the mark of strict impartiality. In his view it is the Belgian Government—not its officials—that was responsible for the worse than Egyptian bondage, and since he wrote the Pharaoh has happily departed.

The Tempest. Edited by FRANK JONES. (1s. Mills & Boon.)

The preface is an apology for a new school edition. Mr. Jones holds, as do most teachers to-day, that "the play's the thing," and that most notes are no less interruptions than the observations of our neighbours when we are seeing a play. For a first reading we must put the pupil as far as possible in the position of a spectator. But he also holds that, on a second or third reading, the teacher must see that the pupil understands every sentence, phrase, word, and allusion. Where he differs from previous annotators is in leaving the pupil to solve all difficulties within his grasp, only directing his attention to them by judicious questions. Our only criticism on these is there are too many on grammar. With some of the scansion in Appendix IV we cannot agree:

"Dáshes | the fire | out. O' | I háve | súffered."

Surely "fire" is a dissyllable.

All Men are Ghosts. By L. P. JACKS.

(5s. net. Williams & Norgate.)

"Mad Shepherds" revealed the Editor of the *Hibbert Journal* in a new and unexpected aspect, and these "Chips from a Theologian's Workshop" are not less delightful. His ghosts are not those who squeaked and gibbered in the streets of Rome nor the Poltergeists of the Psychical Research Society, but the stuff that dreams are made on; only with him the dreams are the reality and our waking life the phantasm. This theme is embodied with rare imaginative power in the first story, "Panhandle's Haunted House," and in "The Hole in the Water-skin: a new Arabian Night." The other stories are slighter, but to our taste the gem of the book is "Farmer Jeremy." It is a study of the *ancien régime*, as true to the life as Tennyson's "Northern Farmer," and with more of true humour.

Lords' Men of Littlebourne. By JAMES CHAPMAN ANDREWS. (1s. 3d. Harrap.)

A spirited story of villain life in the fourteenth century. It is, perhaps, too remote in time and archaic in diction to attract the human boy, but it would serve well as a reader for a class studying this period in English history.

"Tales for Children from Many Lands." Edited by F. C. TILNEY. (1s. 6d. net per volume. Dent.)

These volumes of standard classics adapted for children are attractive in form and the type is large and clear. Of the two before us *Gulliver's Travels* gives the adventures in Lilliput and Brobdingnag, and it is illustrated by Arthur Rackham, whom it would be an impertinence to praise. *Fables of La Fontaine* is a prose version of the fables not borrowed from previous fabulists. We are not among those who "look askance at any prose version of poetry"; but, in the case of La Fontaine, we do hold that the form is everything—"you seize the flower, the bloom is fled"—and this *hortus siccus* will not appeal to children. Take the second fable, "The Hare and the Partridge": "A pack of hounds making an onset obliged the hare to seek refuge. . . . Towler, philosophizing, concluded that the scent came from his hare." What will children make of it?

Evolution and Empire. By J. W. GRAHAM. (2s. 6d. net. Headley.)

This may be called a companion volume to Norman Angell's "The Great Illusion." Both books are pleas for peace, and the economic arguments proceed on the same, though wholly independent, lines; but Mr. Graham takes a wider view, and his main argument is socialistic and moral. He vigorously combats the pseudo-Darwinian theory of the survival of the strongest, and shows, as J. R. Seeley showed before him, that the British Empire was founded in trade, and that its justification is the security of trade and commerce, and not of English trade alone. Mr. Graham is no sentimentalist or dreamer like Tolstoy. His premises are the facts of history, and he appeals solely to reason. His logic is clear and his style attractive.

The Facts about Shakespeare. By W. A. NEILSON and A. H. THORNDIKE. (1s. 6d. Macmillan.)

Of books about Shakespeare there is no end, but there was still need for this last volume of the Tudor Shakespeare by two American professors: a pocket cyclopædia of Shakespeare learning. In the space of some three hundred pages almost every question concerning life, traditions, order of the plays, development of art and thought, the Elizabethan stage and playwrights, text and authenticity is touched upon, and appendixes give important documents, such as the Will, and full bibliographies under various headings. When we add that the cyclopædia has high literary merits, and is anything but a collection of dry facts, we have said enough to send our readers to the book itself.

The Chisholm Readers. Book I, 10d.; Book II, 1s.; Book III, 1s. 3d.; Book IV, 1s. 4d. (T. C. & E. C. Jack.)

Given this series as an inducement, children, without the aid of Dr. Montessori's sand-paper letters or Prof. Rippmann's simplified spelling, would quickly learn to read. The pretty pictures would first attract them, and they would soon be spelling out for themselves "This is the way we wash our clothes" and "It is a purse," said Jack, and Book I is all "full of gold pieces." The books are well graduated, and Miss Chisholm has a keen *flair* for children's tastes, though we cannot approve equally all her selections. Some of the Greek myths here given have been better told elsewhere; Browning's "Pied Piper" loses most of its charm in prose. The illustrations, by various artists, are not all so good as in Book I: the Perseus in the Andromeda picture looks as if he was bound to the rock and afraid of the sea monster. Why are not the authors of the extracts always mentioned?

The Song Garland. A Collection of One-, Two-, and Three-part Songs for Girls of High-school Grade. Compiled by JULES S. JOANNES. (6s. Macmillan.)

This is a collection of over eighty songs for schoolgirls. It is a somewhat mixed assortment, but many classics will be found among others less worthy of a place. We do not altogether approve of some of the "arrangements." Schubert's "Serenade," for instance, is spoiled by the three-part arrangement. Cherubini appears only in some canons without words, but his two-part "Solitario bosco ombroso" and others might well have been included along with some of Blangini's nocturnes, which are very melodious and well suited for the purpose of the book. This can hardly be said of Cornelius's "Ein Ton," which needs finished and matured singing. We cannot think the compiler altogether happy in his selection.

Children's Singing Games. Words by LETTICE THOMSON; music by ALBAN DOBSON, B.A. (1s. 6d. H. Marshall.)

There is nothing very distinctive about these songs. It may be for the sake of simplicity that there is such frequent repetition in the melodies, but the result is very monotonous. There is also a lack of dramatic effect; thus the music for "the thunderstorm" bears a close resemblance to that for "the doll's lullaby." "Bedtime" is perhaps the most attractive of the songs, though it sounds as if it had only just escaped being a hymn-tune.

"Days with the Great Composers."—Vol. III: *Mozart, Schumann, Tchaikovsky*. (3s. 6d. net. Hodder & Stoughton.)

For those too young for serious and lengthy biographies, these "Days" give a wonderful amount of biographical detail in a very palatable form. They are vivid and interesting, and keep as near to fact as possible, and are surely better reading than much of the fiction written for the same age. The pictures are attractive, especially "Mozart at his Piano" and "The Two Grenadiers."

"Nursery Rime Series." With Illustrations by H. WILLEBECK LE MAIR. (1) *Grannie's*, (2) *Mother's*, (3) *Auntie's*, (4) *Nursie's Little Rime Book*. (Each 1s. net. Augener.)

It is good to have again in an attractive form the old nursery favourites. Miss Le Mair's illustrations are dainty and delicate, but we fancy the infant will require something more realistic and more nearly corresponding with the text. In "Goosey gander"

he will ask "Where's the naughty old man?"; in "Twinkle, twinkle," "Where's the star?"

Masterpieces of Music. (1s. 6d. net each vol. Jack.)

We are glad to note two more of this series—Weber and Rubinstein. The latter is naturally a more interesting personality, but both books maintain the level of scholarly treatment adopted in the previous volumes.

The Scout's Book of Birds. By OLIVER G. PIKE, F.Z.S. (2s. 6d. net. Jarrold.)

A well written book, full of the interest which comes from the relation of personal experience. The photographic illustrations are unusually good.

Mayall's Ink Powders.

Some time ago Messrs. Mayall sent us samples of their various Ink Powders, and we have given them an extended trial. The black ink is very satisfactory, and the coloured inks have a brilliant hue. All dissolve readily in cold water, and the claim that they can be washed completely out of clothing is no exaggeration.

ANNUALS.

Hazell's Annual, 1914. (3s. 6d. net.)

The distinctive feature of this, the twenty-ninth, year of issue is an elaborate article on the Balkan States, contributed by a very distinguished military historian (it is not hard to guess his name). It occupies sixteen pages, not including a very clear two-page map. The statement that the Index contains some ten thousand references will give some notion of the comprehensiveness of the work; and, as far as we have been able to check them, all statements have been brought up to date. It may seem ungracious to notice the one fly, or rather a midge, that we have detected in the ointment, but we can discover no reference to the Registration of Teachers.

Whitaker's Almanack, 1914. (Paper cover, 1s.; half-bound, 2s. 6d.)

All will remember the story of the witty bishop who "took in" a whole class of children by asking what was the book that he consulted every day of his life. The bishop's answer was "Bradshaw," and our answer to the same question would be "Whitaker." Under our own special subject we find this year a summary of the educational systems of the world, and an excellent article by Mr. W. A. Evans on "Secondary Education in the United Kingdom."

The Englishwoman's Yearbook and Directory, 1914. (2s. 6d. net. A. & C. Black.)

This annual, now in the thirty-third year of its publication, takes all women for its province, and embraces every phase of woman's activity, from teaching down to Jiu-jitsu; but it deals mainly with professions for women, of which eighty-eight are described. Education, which, after all, is their leading profession, hardly gets its fair share. Under "Registration" the names of the women members of Council are not given, nor is there any information as to the steps to be taken to get registered. The Jaques-Dalcroze method, which has come to stay and already employs a number of woman teachers, deserved a paragraph. Miss Alice Woods resigned the Principalship of the Maria Grey College last June.

Libraries, Museums, and Art Galleries Yearbook, 1914. (Paul & Co.)

This fourth edition of Greenwood's "British Library Yearbook," has been revised and brought up to date by Mr. Alex J. Philip, the Curator of the Gravesend Public Library. The Editor apologizes for imperfections, due mainly to the neglect of librarians in sending in the returns asked for. This is a public duty, and the defaulters deserve to be placed on a black list. The work has been well done. The printing, or rather the paper, leaves something to be desired.

Who's Who, 1914. (15s. net.) *Who's Who Yearbook.* (1s. net.) (A. & C. Black.)

The fame of "Who's Who" *crescit occulto velut arbor aevo*. Each year it grows in bulk (the present volume by a hundred pages save one) and each year becomes more indispensable. As we have remarked in previous notices, it will be necessary for the editor to exercise his blue pencil more freely. Thus, the various communications of men of science to learned societies might well be curtailed or omitted and make place for a brief necrology, a bare list of entries omitted by reason of death. On a cursory examination we can discover very few missing names—Mr. Cloudesley Brereton; Mr. Clutton Brock, the art critic of the *Times*; Mr. Dent, the publisher; Mr. Loring, the Warden of Goldsmiths' College; and Mr. Frank Ritchie, Secretary to the Teachers' Registration Council. *Per contra*, we find most names of distinguished foreigners in whom Englishmen are interested—George Brandes and Anatole France. The "Yearbook" is a useful companion, enabling one to identify the member for Little Pedlington or the Chief Clerk of the Circumlocution Office.

GIFT BOOKS.

Macaulay's History of England. With illustrations. Vol. I. Edited by C. H. FIRTH. (10s. 6d. Macmillan.)—Lord Macaulay's great-nephew has recently shown us, both by precept and example, that a history, whatever its other claims, is bound to be also a literary work, and the present editor, an impartial witness, tells us that a close scrutiny of the History, while revealing some defects and errors, has increased rather than diminished his admiration. Let us hope that he will fulfil his intention and do for Macaulay what Prof. Bury has done for Gibbon, and give us an annotated edition to which this illustrated edition will serve as a prelude. To it we may apply with the change of a word the familiar Latin refrain,

"Cras leget qui nunquam legit, quique legit cras leget."

The frontispiece shows us Macaulay (from a daguerreotype) as the present reviewer was privileged to see him in his study at Holly Lodge. There is the somewhat idealized portrait by John Partridge, taken ten years earlier, and the caricature by Dicky Doyle, hitting off the "cocksuredness" that Sydney Smith envied. Aided by the best experts the editor has culled from the National Portrait and other galleries authentic portraits of the chief actors, and has searched the Sutherland Collection of the Bodleian containing nearly twenty thousand illustrations. We have besides maps and plans and specimens of the ballads and broadsides that formed one of Macaulay's chief authorities. These are admirably reproduced, though the three-colour process cannot do justice to the palette of Lely and Kneller. One warning to generous givers—the nephew or godson who is presented with the first volume will assuredly not rest content till he possesses the remaining five.

The Adventures of Akbar. By FLORA ANNIE STEEL. (6s. net. Heinemann.)—Orientals are precocious, yet there can be no question that this is, in the main, as Mrs. Steel asserts, a veracious story—that it is founded on the genuine history of Baby Akbar before he was five years old. King Huméyou, Queen Humede, and the rebel Prince Kumran are historical characters, and the cat, the dog, and the Rājput may have played their parts in the marvellous adventures which will captivate boys and girls when they get accustomed to the unfamiliar names. The book is illustrated in colours by Byam Shaw.

The Boy's Book of Battles. By ERIC WOOD. (3s. 6d. Cassell.)—The thirty battles here described range from Marathon to Tsushima. They include nearly all of Cressy's decisive battles of the world, but there are some hardly worthy of the name which would floor even adults if set in a general information paper—Damme, Caxamelca, Boyaca, the Eureka Stockade, Palermo. Mr. Wood knows how to tell a story, and his descriptions are graphic, with no attempt at fine writing. We think, however, that, even in a boy's book, some indication might have been given both of the strategy and the tactics and of the issues to show that battles mean more than hand-to-hand fighting. Boys may be interested in the "Nelson Touch" in the *Westminster Gazette* problem: "What would have happened if Napoleon had won Waterloo?" and without a plan Waterloo is mighty maze.

In the Days of Lionheart. By Wallace Gandy. (3s. 6d. net. Harrap.)—This is an excellent book for an intelligent boy or girl or any one. Mr. Gandy takes us back to the days of Cœur de Lion—bad old days, as we children of the larger historic growth have learned to style them, led by the judicious Stubbs. England enjoyed about six months of his society during ten years of little wars, and the tale of the aids, scutages, tallages, hideages, carnages, fourths of movables, and so on, are they not set down in the "Chronicles" to the accompaniment of groans from an over-taxed people, taxes from which they benefited nothing? But these things are in another bulkhead. Mr. Gandy takes us into the social life of the people of the Plantagenet days and shows us how schoolboys play, quarrel, study in languages other than their own by means of that powerful aid to learning, the birch. George-a-Green was a yeoman's son, but his father was a traitor to Henry II, and had his land forfeited to that monarch when his rebellion was discovered. Green was a Wackefielde man, the pound-keeper or pinder of that city, the hero of a play by Robert Greene, one round whom much romance circulates and who is a personage among the peasantry much as was Robin Hood. A manuscript describing his doughty deeds is still in Sion College; it may have been written during the Tudor period. Mr. Gandy relates how a small boy of nine, placed on the whipping-stool for correction, upset the master, took to his heels, and then began a roving life, finding board and lodging as he made himself serviceable. The thread of the story is slender, but the life of the peasantry, their meals and talk, the high value of money (5s. for a horse), the furniture of the house and table, a wattle and daub house which George helps to build,

Wakefield Fair and the rough-and-tumble justice of the Court of Pie Powder make interesting reading. Thus, Rick, the sausage maker, was compelled by the court to eat a sausage he had made of measly pig, and was then put into the pillory and whipped. Wakefield was famous for a cycle of mystery plays, and the Nativity is reproduced for us as George saw it. The shepherds are homely persons and bring gifts of a bob of cherries (surely these must have been preserved at Christmas), a bird, and a ball for the Bavin. Quite a good book for the holidays or for an inexpensive prize.

Beyond the Dragon Temple. By ROBERT HUDSON. (3s. 6d. Nelson.)—The story begins by introducing a band of friends of various nationalities and equally varied characters and circumstances, who, stumbling by chance on the victim of some Chinese cut-throats in the outskirts of San Francisco, are through his means launched on a wonderful adventure in search of the treasure of Prester John. They pass through endless dangers, sometimes helped by an old professor who goes with them and, being a Theosophist, has mysterious dealings with like-minded people in all parts of the world, and very much hindered by a Frenchman who considers the treasure his and does not stick at a trifle to get it. It is a thrilling story and well told; the deep throbbing vibration of the gong which recurs in special moments of danger adds a touch of weirdness to the tale. There are some effective coloured illustrations by Sheldon.

(1) *Jo Maxwell, Schoolgirl.* By LIZZIE C. REID. (2s. 6d.) (2) *Rosalys New School.* By ELSIE OXENHAM. (3s. 6d.) (Chambers.)—These are, as their titles show, stories chiefly of school life, with its ups and downs. Small jealousies and misunderstandings loom large for the moment, but, on the whole, the advantages outbalance the defects. Both Jo and Rosaly are generous hearted children, and girls will like to follow their fortunes. The first book is illustrated in black and white, the second in colour.

Jack Corvit, Patrol Leader. By V. R. NEUDICK. (2s. 6d. C. Arthur Pearson.)—A series of short stories of the doings of Jack Corvit, each illustrating an item of the Scout Law. Jack is a good sort of boy, and, considering how invariably he comes to the front, whether in the detection of fraud, saving horses from a burning farm, or a child from an accident, he is astonishingly modest. If all Scouts are trained to act up to their laws, they will be valuable members of society.

CORRESPONDENCE.

"LEEDS UNIVERSITY: A CRITICISM."

ELECTRICAL ENGINEERING DEPARTMENTS IN GERMAN AND ENGLISH UNIVERSITIES.

To the Editor of The Journal of Education.

SIR,—Whenever I return to England from a visit to technical high schools and Universities in Germany I find upon my mind four strong and somewhat discordant impressions. First, in regard to the programs and equipment of the technical high schools, what is offered in Germany is on an ampler scale than what (except in a few cases) is at present available in England. Secondly, England has acted wisely in not following the German example of separating higher technological work from other branches of University study. Thirdly, the average German employer has the habit, as yet comparatively uncommon in England, of appreciating the value of higher education as a preparation for business. Fourthly, the English employer, though still as a rule unappreciative of the service which high scientific attainment may render to modern industry, has a very shrewd instinct on commercial matters, and is free from undue subservience to the intellectual fashion prevailing at the time.

If it is possible to combine what is good in these four characteristics and to eliminate what is defective in each of them, the resultant system of education and industry would be better than that which prevails at present in either of the two countries, and would promote the already increasing intellectual intimacy between the two countries.

Your correspondent, "Scrutator," in his trenchant contribution to the December number of *The Journal*, deals with many details of which I have no technical knowledge. But the chief interest of his article lies in observations which (in spite of the title given to his paper) refer not to the University of Leeds alone, but practically to all our English Universities and technical colleges.

Those who know the department of Electrical Engineering at this University have good reason to feel proud of its work and of the men it has trained. In positions of the highest responsibility men who have passed through the courses here are proving their scientific value and (what matters in the long run at least as much) their power of continued intellectual growth, the vigour of their character and the good sense and good temper with which they deal with the workmen and subordinates under their care. It is not necessary for me to deal seriatim with the details of "Scrutator's" article, but I should like to add that, so far from divorcing theory from practice and from imagining that a few hours a week in a University workshop suffices for an engineer's practical training, we in Leeds inform all the students that workshop practice can only be satisfactorily obtained in a factory under industrial conditions. Rarely, if ever, does a man take a degree or diploma here without having spent at least one year's, and more often two or three years', previous pupilage in the workshop of a factory.

The excellent and responsible positions attained by our students all over the world, coupled with the many and repeated inquiries from the best manufacturing firms for men who will fill vacancies on their staffs, will reassure anyone who, on reading "Scrutator's" article, may have formed the impression that the work done in the Electrical Engineering Department of this University is unpractical or incomplete.—Yours faithfully,

M. E. SADLER.

University of Leeds, December 17.

THE BRISTOL UNIVERSITY.

To the Editor of The Journal of Education.

DEAR SIR,—May I, as a member of the Court of the Bristol University, protest against the unfairness of your Occasional Note on the meeting of the Court on November 14. It is true, as you say, that the Bishop of Bristol said that he could not imagine any member of the Council voting against Prof. Turner's proposal. But he said this before and not, as your note seems to imply, after the Vice-Chancellor's speech. After that speech, in which the Vice-Chancellor had responded to the request of the former Chairman of Council that he should state any facts in connexion with the case which he might think it desirable to lay before the Court, the Bishop then stated that, inasmuch as Council had complied with the request contained in Prof. Turner's proposal, he could not possibly vote for the proposal if it was still pressed. Your account of the matter seems to me a masterpiece of misrepresentation by omission.

You make some point of the fact that only one member of the Senate took part in the discussion. That is not strictly true, as Prof. Wertheimer spoke briefly, but if it were I cannot see why members of the Senate should speak, as Prof. Turner's motion was a request to Council—not, as you say, to the Senate.

At the end of the discussion the Court, after hearing the Vice-Chancellor's statement, were voting not so much on Prof. Turner's original request, but, as he himself said when pressing his motion to a division, on their view of the Vice-Chancellor's statement. May I also, in justification of my own vote on that occasion, ask you if you are seriously prepared to maintain that an appointing body in a University should make public its reasons for not appointing any particular candidate or for not reappointing a Professor whom legally it may or may not reappoint, because it is thought to have made a mistake by some persons? I agree that there should have been strong reasons—based, of course, on qualifications—against the reappointment of Prof. Cowl to justify the action of Council. After hearing the Vice-Chancellor's speech, I have no doubt that there were. Suppose, however, that Council did make a mistake. Most Universities in their appointments and their non-reappointments do make occasional mistakes. Would they not make many more if they could not do anything without being prepared to publish their reasons for their action?—Yours sincerely,

A. D. LINDSAY.

Balliol College, Oxford.

[We have now before us the full report of the meeting of the Court on November 14, reprinted from the *Western Daily Press*, and regret that we overlooked the fact that the Bishop of Bristol in the course of the debate twice changed his opinion, and first stated that he was not prepared to vote one way or the other, deciding ultimately to vote against Prof. Turner's motion, if pressed, as a vote of want of confidence. We likewise agree with our correspondent that it would be highly undesirable that any electing body should be liable to be called to account and required to publish the grounds of their choice. But this admission does not shake our original position. Prof. Cowl was virtually dismissed from his professorship. This dismissal appeared not only to a large section of the Bristol University, but also to the whole body of Professors of English in the Universities of the United Kingdom, *prima facie*, an act of injustice. It seemed to us, and still seems, that there was a clear case for an appeal either to the Chancellor or to the Visitor of the University, and that in consenting to this the Council would in no way have derogated from its dignity. If the case is as clear as the Vice-Chancellor would have us believe, he would have had no difficulty in justifying his action before the Chancellor and his assessors, and so shutting the mouths of slanderers and calumniators. The counter charge of a conspiracy of the London press would hardly have been brought before such a tribunal.]

JOTTINGS.

THE Report of the Department of Technology, City and Guilds of London Institute, 1912-13, shows slow but steady growth and progress. The number of separate classes has increased by over three hundred, and the number of students in attendance has reached 54,510—the largest number on record. For Teachers' Certificates there has been a slight falling off in manual training, woodwork—1,573 against 1,693 for 1912; but in metalwork a slight increase—187 against 162. For blackboard drawing there were only 46 passes.

THE address of the Association of Head Mistresses is now 61 Great Ormond Street, W.C.

CAMBRIDGE LOCAL EXAMINATIONS.—The December Cambridge Local Examinations were held at 227 centres in the United Kingdom and the Colonies. There were 15,033 candidates, of whom 237 entered for the Higher, 4,485 for the Senior, 6,251 for the Junior, and 3,660 for the Preliminary Examination. Of the Colonial Centres, 16 are in India, 6 in Ceylon, 5 in the Straits Settlements and Malay States, 11 in South and West Africa, 13 in the West Indies. There are also centres at Bermuda, Buenos Aires, Belize, Canada, Dunedin, Mauritius, Seychelles, and Shanghai. The Regulations for the Examinations to be held in July and December 1914 may be obtained from Mr. J. H. Flather, Syndicate Buildings, Cambridge.

MR. G. E. MAPPIN wishes us to state that the article "Leeds University: a criticism," by Scrutator, in our last number was contributed by him.

THE Modern Language Association arranged last summer for a further report on Continental holiday courses. The courses visited were those at Nancy, Dijon, Besançon, Neuchâtel, Lausanne, Geneva, Grenoble. The report appeared in the December number of *Modern Language Teaching*.

MR. PAUL STUDER, M.A., D.Litt., has been appointed Taylorian Professor of Romance at the University of Oxford.

DR. PERCY NUNN, of the London Day Training College, has been appointed to a Professorship of Education by the Senate of the University of London. Now that London has determined that these professors are none too many, possibly Oxford and Cambridge will be induced to consider the advisability of appointing one.

MR. FOSTER WATSON has resigned his Professorship of Education at Aberystwyth College in order to devote himself to the work of research in London. Mr. Watson will continue to deliver a yearly course on "The History of Education" at Aberystwyth, and the Senate has conferred on him the special title of Emeritus Professor.

"A MANAGER" writes to the *Manchester Guardian* complaining of the blunders of our elementary education. He had asked the children in the higher standards of his school what were the four elements and what was meant by "battling with the elements," and they were all dumb. In the next sentence he demands "instruction in the 'elements of learning' before children are taught to think for themselves." Would "A Manager" have been satisfied had the children answered "A B C D and the Catechism"?

MR. R. C. EVANS (so the *Educational News* informs us) has been elected a Fellow of the Royal Geographical Society. Mr. Evans is not only on its staff, but is also the founder and Managing Director of the *Teacher's World*, "a paper which includes among its contributors some of the most famous persons in the land, while it has the great honour of numbering as one of its regular readers Her Most Gracious Majesty the Queen." *Ego laudare fortunas meas*, as the Latin grammar has it.

THE Council of St. Gabriel's Training College, Camberwell, at their meeting on November 10, appointed Miss K. T. Stephenson, B.A., as Principal of the College in the place of the late Miss M. E. Bishop. Miss Stephenson was formerly a scholar of the Royal Holloway College, and has been Senior Lecturer of St. Gabriel's College since its foundation in 1899.

MRS. JESSIE WHITE has in the press an account of the Montessori schools which she visited and inspected during the summer months of last year. The book, published by Messrs. Cornish, will be out in time for the Publishers' Exhibition at the University of London.

IN the award of entrance scholarships offered by the six combined Cambridge colleges, Merchant Taylors heads the list with five scholarships (two for Hebrew); Charterhouse and St. Paul's are each credited with four; and Birmingham, Manchester, Haileybury, Tonbridge, and the City of London with two apiece. The subjects for which they have been awarded are as follows:—For Classics, 18; for Mathematics, 15½; for Natural Science, 12½; for History, 4; for Modern Languages, 2; for Hebrew, 2.

NORTHERN UNIVERSITIES JOINT EXAMINATION BOARD.—The Report for 1913 shows a year of increased activity. The Board has examined a total of 2,670 candidates. Of these 1,638—or rather over half—passed. For Scholarships there were 383 candidates, of whom 121 qualified for Matriculation. For Senior School Certificates 237 entered, and of these 157 obtained certificates exempting from Matriculation. The Board has also recommended for the award of 103 scholarships tenable at the University. Thirty-four schools have been examined or inspected.

IN spite of the amalgamation at South Kensington—for which we have to thank the Teachers' Guild—there will be, or rather is, during the first week of the New Year a conflict of conferences, and "Old Fogey's" "amiable busybody"—or teacher-student, as we should prefer to call him—will find himself distracted by an *embarras du choix*. The Incorporated Head Masters are sitting at the Guildhall, the Assistant Masters at the London Day Training College, the L.C.C. Teachers at the Birkbeck, and in the provinces the North of England Education Conference is holding its twelfth Annual Meeting at Bradford with a varied and attractive program.

EDUCATION IN THE PERIODICAL PRESS.

Arithmetic, The wisest Way to teach. Educating your child at home. By Ella Frances Lynch. *Girl's Own Paper*, December.

Birmingham Blue Coat School. *Builder*, November 14.

Deals with the building, and is fully illustrated, but deals also with school types in architecture.

"Bloat the Boys Hall." The new private school. By Twells Brex. *Daily Mail*, December 3.

Deals with the high degree of comfort and the amount of the fees charged.

Board of Education Report. Leading article. *Local Government Chronicle*, December 20.

There are also articles in *Local Government Journal* and other periodicals.

Cardiff Medical School, Staff appointments at. *Hospital*, November 15.
Compulsory Continuation Schools. Leading article. *Local Government Chronicle*, December 6.

Defective Lighting of Classrooms. *Medical Officer*, November 22.
Herefordshire Teachers. Threatened strike. The salaries grievance explained. From a correspondent. *Manchester Guardian*, December 1.

Law and Art. *La Lectura* (Spain), November.

A sketch of compulsory education in the U.S.

Leeds Scholarship System. An example from Yorkshire. By H. F. S. *Westminster Gazette*, November 27.

Luxury of being Educated. By Henry Seidel Canby. *Harper's Magazine*, December.

Advocates a well-opened mind, and places the claims of the pleasures of education above the struggle for success in finance.

Open-air School. *Builder*, November 28.

Place of the Open-air School in Preventive Medicine. *Local Government Chronicle*, November 22.

Deals with the second of Sir George Newman's three lectures at London University. See also *Medical Officer*, November 29.

Register, The Teachers'. *Times Special Supplement*, December 2.

Registration, and After. Future development of the Profession. Organizing a science. By H. R. Beasley. *Daily Telegraph*, November 27.

University of London, External Examinations. *Morning Post*, December 26.

University in a Palace. The vicissitudinous history of Somerset House. *Daily Express*, November 29.

'Varsity Touch: Is it a Fit Training for a Business Career? By Max Rittenberg. *Evening News*, December 10.

"The average graduate has no conception of real work; of the requirements of modern professional or business occupation." The editor of *E.N.* does not "endorse the opinions."

Jules-Ferry, and the latter, still in its infancy, can already boast of 310 pupils. In the Universities, if from economic and other causes the number of men students declines, the authorities expect that women will take their places. But hitherto there has been a gap, as it were, in the path of the *lycée* to the University. She is not converted into an *étudiante* all in a moment. She has learned enough Latin to translate from Latin into French; but she has not studied texts critically, and of philology and historical grammar her notions are crude. In history she has been taught facts, but not to generalize from them. In fine, when a girl has absolved the *lycée* she still needs further training to fit her for academic studies. To provide it a Société des Cours préparatoires à l'enseignement supérieur has been formed, to which the hospitality of the Sorbonne is being extended. Already courses of lectures are open—lectures on philosophy, on French and the history of the French language, on Greek, on Latin, and on history, as well as on French and on German. This intermediate instruction will be parallel to, and it is hoped will prove as successful as, that which *lycées* for boys furnish in the classes known as *rhétoriques supérieures*.

The bloodless, but fierce, struggle between Church and State continues in France, and *la défense laïque*, or defence of the secular school against clericalism, has been the topic of December in political as well as in educational circles. The Government is disposed to get to closer grip with the enemy. A clause of a Bill under discussion punishes with a fine of from 16 to 500 francs and with imprisonment of from six days to one month "whoever, by violence, threats, or any act involving or capable of involving material or moral damage, shall have incited the parents or other persons responsible for a child to prevent that child from taking part in the prescribed exercises of the public school in which he is enrolled, or from using the books regularly used in the school." Our own "religious difficulties" are deplorable; they do not produce the same terrible social cleavage as the French.

GERMANY.

In *Pädagogisches Archiv* (lv, 11) Oberlehrer Dr. Max Weyrauch

Comparative
Philology in
Higher Schools.

pleads ably for the right of Comparative Philology, or *Sprachwissenschaft*, to quarters in the higher school. Dr. Torbiörnsson has urged the same claim in his native land, Sweden. In Germany some of the later textbooks take the results of general philological studies into account; but there has not yet been achieved what is necessary—*eine grundsätzliche Fundamentierung des Sprachunterrichts mittels des biologischen Elementes unter Verwertung der Ergebnisse der Sprachwissenschaft*. Such a basing is required to stimulate reflection in the pupil, and to compel him to penetrate below the surface, so that he may learn not to be content with the facts of a language, but to consider their logical relation and their historical development. If he hears, for example, that Greek has preserved a dual, an optative and an aorist, and Latin an ablative, that is but dead, unfruitful knowledge if the two languages are not brought into touch for him with one another and with one, at least, of the daughter-languages of Latin—if he does not learn how forms are lost and their functions taken over by surviving forms. But it is not the business of the school to teach all the results of comparative philology: it can only use them so far as is requisite in the several departments of language study. The following topics might be introduced: formative and destructive factors; usage and correctness in language; the most important parts of phonology (places where sound is formed, influencing of consonants by vowels, palatization, the different kinds of accent); the sound shifts; the relation between the spoken and the written language, and so forth. And better than to make a separate subject of comparative philology is to weave its teachings into the Latin, the Greek, the French, or the German lesson.

English teachers who are interested in the question will see what is being offered to German boys if they consult the introduction (by Hermann and Reissinger) to the eighth edition of Heinichen's "Schulwörterbuch," published by Teubner, where a mass of newly tested and serviceable results is presented. To change the subject, Baden issued last July an Ordinance: *Über die praktische Ausbildung und Beschäftigung der Lehramtspraktikanten*. It is to this effect.

The Training of
Teachers.

Examinations passed, a teacher *in spe* has to declare the school to which he wishes to be assigned for professional training. As soon as he has been assigned he is sworn in by the Head Master and passed on to one of the staff-masters, who gives him classes to take, and aids him with advice and instruction in the theory of teaching. In the second term of his year of probation he has to submit a written discourse upon some subject in the sphere of his special activity. In the

COLONIAL AND FOREIGN NOTES.

FRANCE.

The *étudiante* may be made the butt of the wittlings; but France

The Education
of Women.

continues to develop from base to apex her scheme of instruction for women. Public secondary education for them M. Liard recently described as "une des créations les plus heureuses de la troisième République." October last saw the inauguration, as the French say, of two *lycées* for girls, the *lycée* Victor-Duruy and the *lycée*

second half of the third term he must give a test lesson. Both the written paper and the test lesson form the objects of reports by the guiding teacher and the Head Master, these reports being laid before the Ministry, which grants or refuses a certificate of competence. In the latter case the year of probation may be extended by from one to three terms; with a final refusal the candidate quits the service of the State.

It is all admirable, is it not? Perhaps our readers may wish to follow the young, now trained, teacher further. The State will only accept the number of teachers that it requires, and the year of probation successfully passed the teacher must make special

application for office; those for whom no room can be found depart. Thus in theory a candidate trains at his own risk; in practice, we believe, employment, if after some delay, is given to the qualified. Those who are received are called in to do *unpaid* work until paid work can be allotted to them. At this stage they are called volunteers, and take over lessons (maximum six in the week) for some regular staff-master. They do the work on their own responsibility; but the staff-master must keep himself informed about what is going on, and, if need be, intervene. No staff-master may have both a candidate to be guided and a volunteer to assist him. The training is strenuous, but the young German University man is willing to make the long voyage amid chances of shipwreck because it leads to the haven of secure existence and a home.

[Notes on "Russia" and "United States" are unavoidably held over.]

THE WESTMINSTER PLAY.

THIS year was the turn of the "Andria" of Terence. The cast was fully up to the average, and the elocution better. The chief honours undoubtedly rested with the Simo (Mr. R. R. Turner), whose enunciation was excellent, whilst his acting was both dignified and energetic. The other old men, Chremes (Mr. M. A. Phillimore) and Crito (Mr. A. N. Charlton), were also good, and all three were no doubt much assisted by their admirable make-up. The latter was rather inclined to use his staff as a hobby-horse, with an unintentional comic effect. The second best performance of an individual actor was that of Mr. C. L. Bayne, in the very small part of Byrrhia. He really gave one an idea of the saucy, malapert slave.

Mr. D. H. Kitchin (Davus) worked very hard in the chief comic part in the play, but one cannot honestly say that he was very successful. His humour always seemed forced and artificial, although his elocution was excellent.

The two young lovers, Mr. S. L. Holmes as Pamphilus and Mr. S. F. Waterson as Charinus, were both inclined to hurry their words, and were occasionally a little indistinct; but nevertheless the former especially contrived to infuse a considerable amount of fervency into his protestations of fidelity to his lady-love.

In the woman's part of Mysis, servant to Pamphilus' innamorata, Mr. G. G. F. Greig acted with restraint, yet without awkwardness. His rather chaste attempt at cuddling the baby in Act IV was greeted with sympathetic sniggers by friends in the back rows.

The whole performance was welcomed most enthusiastically. All the points were marked by rounds of applause from "the gods," and the old familiar tags, like "Ne quid nimis," "Hinc illae lacrimae," and "Amantium irae," were not allowed to pass unnoticed.

Amongst those present on Monday night were the Swiss Minister, the Marquis of Crewe, the Deans of Westminster, St. Paul's, and Christchurch, the Head Master of Winchester, Bishop Boyd Carpenter, the Mayor of Westminster, Mr. Justice Bankes and Mr. Justice Rowlatt, Sir Henry Craik, Sir Sidney Lee, and the Post-master-General. The full cast is appended:—Pamphilus, S. L. Holmes; Simo, R. R. Turner; Sosia, R. S. Browning; Mysis, G. G. F. Greig; Charinus, S. F. Waterson; Byrrhia, C. L. Bayne; Lesbia, G. R. D. Gee; Chremes, M. A. Phillimore; Crito, A. N. Charlton; Dromo, T. R. Dawson; Davus, D. H. Kitchin.

As regards the Prologue and Epilogue, the former was quite short, but contained a graceful reference to Warren Hastings, an old Westminster Boy, who, in serving the Empire, triumphed over both the wiles of the foreigner and the calumnies of his own countrymen. The Epilogue also was brief and racy. Various topics of the day were touched upon—and punned upon. Marconi shares, pheasants, Larkin's Fiery Cross, the Suffragettes, slit skirts, and Tango teas all came in for attention. Mr. S. L. Holmes was very cleverly got up as Lord Murray of Elbank, and Mr. R. S. Browning as the Poet Laureate, whilst Mr. G. G. F. Greig

and Mr. G. R. D. Gee showed that the modern woman is quite prepared to take care of herself—with a hatpin or the toe of her boot.

The first lines are a good sample of the humour and the puns.

Davus (a mysaristocrat).

Marcone hunc cyathum placet ebibere? optima vina;

Hoc claret. Reditus haec mea coepita ferant

Ingentes, longaeque supra par evelet illis

Argentum!

Simo (a legal luminary). Ast opus est addere nescio quid.

Da. Quid?

Si.

Comiti absenti qui cessat in urbe Bogota.

Da. Sicubi sunt faveant olearea numina nostro!

Very clever; but it is strange that longs and shorts that would have seemed to Ovid as Verlaine's alexandrines to Racine or Boileau should have become traditional at Westminster.

UNIVERSITIES AND SCHOOLS.

LONDON.

Since my last letter the "battle of the sites" has taken on a new phase by the declaration of the London County Council in favour of Somerset House. An amendment favouring a site on the south side of the river was rejected by two votes. It is further suggested that the London County Council should join with the Senate in sending a deputation to the Government to urge the advantages of this building for the central head-quarters of the University; but the invitation has not yet been considered by the Senate. One would have thought that the London County Council, as at present composed, which has been singularly unsuccessful in inducing the Government to rectify admitted grievances from which local government in London suffers, would not be the most powerful ally which the University could select in such a matter. And in this case the arguments to be urged—assuming the University decides to approach the Government, which has already declared itself sympathetic to a great development of the University and has referred this specific question at issue to a Departmental Committee—do not appear to be very convincing. For the expense of rehousing the army of officials and masses of documents at present in Somerset House would be stupendous, and the accommodation rendered available for the work of the University would not be very suitable, even after costly adaptation, for the particular needs of the University or for the policy of consolidation which the Royal Commission recommended.

The Improvements Committee of the London County Council "draw attention" to two sites on the south side of the river, one of 7½ acres and the other of 29 acres, and, without making any definite recommendation, urge that the subject should be settled only after the gravest consideration so that the result may reflect credit on all those concerned, and that the new buildings for the University of London shall be established on a site and in such a manner as will render them in every way worthy of the capital of the Empire. In the University itself, the Museum site has strong supporters, and as it appears to be the only practicable site which satisfies the requirements of the Royal Commission, one may safely assume that it will be recommended by the Departmental Committee. One great virtue which it possesses is that it is already cleared for buildings. There are various indications, particularly the decision to build the Shakespeare Memorial Theatre on an adjoining site in Gower Street, that the prejudices against Bloomsbury are dying a natural death. Possibly some means may be found for overcoming the alleged disadvantages of the division of the site into four plots. My personal view on this question—which I communicate because it is impossible to report the opinion of the University as at present constituted on this and many other questions—is that, apart from the inconveniences of public traffic between the buildings (which may possibly be avoided) the provision of a dignified group of buildings for the University—a great hall on one plot, the administrative building on another, and so forth—is much to be preferred to a mammoth building with a wilderness of corridors, difficult to control and ventilate, and even more difficult to design, if one may judge from existing examples of such buildings in London.

Mr. Pease is still talking about the University of London. Those of your readers who are specially interested will have read the reports in the daily press, and I need only remark that the Minister of Education appears to be disposed to work in the conciliatory spirit without which no permanent progress is possible. In his speech at Birkbeck College, Mr. Pease said that one of the principles of reconstruction to which he attached most importance was

(Continued on page 50.)

MACMILLAN & CO.'S LATEST LIST.

CLASSICS.

A Dictionary of Classical Names for English Readers. By W. T. JEFFCOTT, B.A., Senior Classical Master of the Grammar School, Burton-on-Trent. 1s. 6d.

THE ATHENÆUM.—"This dictionary should be welcomed, not only by students, but also by general readers, who are constantly finding in English Literature references to classical names and events which they only imperfectly understand."

ENGLISH.

Notes on the Teaching of English. By W. J. BATCHELDER. Part I, 1s. 6d.

THE TEACHERS' WORLD.—"We have rarely seen a more helpful book. The suggestions are practical without being trivial, and we shall look forward to the Second Part with very great interest."

ENGLISH LITERATURE FOR SECONDARY SCHOOLS.—New Volume.

Wanderings in Spain, selections from "The Bible in Spain" of George Borrow. With Introduction, Notes, &c., by F. A. CAVENAGH, M.A., Fellow of University College, London, &c. 1s.

ENGLISH CLASSICS.—New Volume.

Scott's Guy Mannering. With Introduction, Notes, &c., by R. F. WINCH, M.A., Author of "Notes of Macaulay's 'Essay on Boswell's Life of Johnson,' &c." 2s. 6d.

POCKET SERIES OF ENGLISH CLASSICS.—New Volumes.

Sense and Sensibility. By JANE AUSTEN. Edited, with an Introduction, Notes, and Queries, by EDWIN L. MILLER, A.M. With Frontispiece. 1s. net.

Boswell's Life of Johnson. An Abridgment with Annotations by the Eminent Biographers and an Introduction and Notes by MARY H. WATSON, A.M. With Frontispiece. 1s. net.

The Mill on the Floss. By GEORGE ELIOT. Edited, with Introduction and Notes, by IDA AUSERMAN, A.B. With Frontispiece. 1s. net.

THE TUDOR SHAKESPEARE.—New Volumes.

Antony and Cleopatra. Edited by GEORGE W. BENEDICT, Ph.D. With Frontispiece. 1s. net.

The Tempest. Edited by HERBERT E. GREENE, Ph.D. With Frontispiece. 1s. net.

The Facts about Shakespeare. By Prof. W. A. NEILSON, Ph.D., and Prof. A. H. THORNDIKE, Ph.D. With Frontispiece. 1s. 6d. net.

FRENCH.

Victor et Victorine. Par Madame J. G. FRAZER, Auteur de "Émile et Hélène," &c. Dessins de H. M. BROCK. 1s.

EDUCATIONAL NEWS.—"This is a really charming book for quite young beginners. . . . The illustrations are really delightful. Mrs. Frazer's name is sufficient to recommend it in any case."

SIEPMANN'S PRIMARY FRENCH SERIES.—New Vol.

Laurette; ou, le Cachet Rouge. Par ALFRED DE VIGNY. Adapted and Edited by J. L. BURDEY, M.A. 1s.

GEOGRAPHY.

A Junior Geography of the World. By B. C. WALLIS, B.Sc. (Lond.), F.R.G.S., &c. With Maps and Illustrations. 2s. 6d.

The Continent of Europe. By LIONEL W. LYDE, M.A., F.R.G.S., Professor of Economic Geography in University College, London. With Maps. 7s. 6d.

EDUCATION.—"It is not too much to say that no teacher of geography can afford to be without this work, which is written with erudition worthy of its marked originality of scheme and treatment."

NOW REDUCED TO 12s. WITH BOOK OF NOTES.

Macmillan's Orographical Map of Europe. Designed by B. B. DICKINSON, M.A., and A. W. ANDREWS, M.A. Printed in 10 Colours. Cloth, mounted on Roller and varnished. Size, 62 in. × 51 in. With Book of Notes. 12s.

MATHEMATICS AND SCIENCE.

A First Book of Practical Mathematics. By T. S. USHERWOOD, B.Sc. (Lond.), A.M.I.Mech.E., and C. J. A. TRIMBLE, B.A. 1s. 6d.

ATHENÆUM.—"A book which should find much favour with students in technical schools. The methods of solution are modern, and all examples of the practical type."

Exercises in Mathematics. By DAVID BEVERIDGE MAIR, M.A., sometime Fellow of Christ's College, Cambridge. With Answers and Hints, 4s. 6d.; also without Answers and Hints, 3s. 6d.

Key to A New Algebra. By S. BARNARD, M.A., and J. M. CHILD, B.A., B.Sc. Volume II containing Parts IV, V, and VI. 8s. 6d.

Exercises from A New Algebra. Parts I to IV. By S. BARNARD, M.A., and J. M. CHILD, B.A. 2s. 6d.

SECOND EDITION, REVISED AND ENLARGED.

Practical Geometry and Graphics for Advanced Students. By JOSEPH HARRISON, Wh.Sch., M.I.M.E., &c., and G. A. BAXANDALL, H.M. Inspector of Technical Schools and Classes. Second Edition. Revised and Enlarged. Adapted to the requirements of the new (1912) Syllabus of the Board of Education, Whitehall. 6s.

A First Course in Projective Geometry. By E. HOWARD SMART, M.A., Head of the Mathematical Department, Birkbeck College, London. 7s. 6d.

A.M.A. CIRCULAR.—"It is distinctly well written, the explanations and reasoning are lucid, the nomenclature is clearly defined and uniformly used. . . . We commend this book to the notice of sixth form masters."

Mechanics and Heat. An Elementary Course of Applied Physics. By J. DUNCAN, Wh.Ex., M.I.Mech.E., Author of "Applied Mechanics for Beginners," &c. 3s. 6d.

* Suitable for candidates for Lower Division Clerkships in the Civil Service and for "Special Entry" as Naval Cadets.

Practical Surveying and Elementary Geodesy. Including Land Surveying, Levelling, Contouring, Compass Traversing, Theodolite Work, Town Surveying, Engineering, Field Work, and Setting out Railway Curves. By HENRY ADAMS, late Professor of Engineering at the City of London College, M.I.C.E., M.I.M.E., &c. Illustrated. 4s. 6d.

THE ATHENÆUM.—"A manual such as this, written by a practical surveyor, and one who has had considerable experience in teaching the subject, should prove useful to the student."

MACMILLAN & CO., Ltd., ST. MARTIN'S STREET, LONDON, W.O.

the provision of University buildings and the formation of a University quarter. This is plainly a matter on which compromise is out of the question—it must be either taken or left. On the question of the external degree, he said definitely that the Government would not countenance any proposal to abolish the degree. For the avoidance of discussion, it is just as well that the position of the Government on this question has been clearly stated. Apart from these two essential doctrines, the questions at issue appear to be left open for friendly discussion and settlement, if possible, by consent.

The adjourned meeting of students, to which I referred last month, was held on December 5 in the Great Hall at South Kensington—none too large for the purpose, as it is stated that fifteen hundred students attended. Some very good speeches were delivered, though the general level of speaking was perhaps not quite so high as to the first meeting. A notable contribution to the debate came from an Indian student. Two amendments or riders were adopted, the first asking for reconsideration of the medical recommendations, and the other expressing satisfaction with Mr. Pease's declaration in favour of external students. As amplified in this way, the original motion was adopted, endorsing the general principles of the report of the Royal Commission and urging co-operation in promoting the policy of consolidation which the Commissioners advocate. The opposition—roughly estimated at one in four—came mainly from women's colleges—Holloway, King's, and Westfield—which are not satisfied with their status in the reconstituted University.

Solid, if not rapid, progress is being made by Lord Cromer's Committee in the organization of the School of Oriental Studies at the London Institution. His Majesty in Council is to be moved to establish the School under Royal Charter, but it is understood that if the University is reconstituted by Act of Parliament the new School will be incorporated in the University.

A return recently published by the War Office showing the number of certificates and commissions taken by cadets of the Officers' Training Corps in the various Universities gives gratifying evidence of the success of the movement in the University of London. Since the establishment of the O.T.C., 524 Certificates "A" and 164 Certificates "B" have been taken by cadets of the University of London contingent, and 60 have proceeded to commissions in the Special Reserve. These numbers are all larger than those for any other University; but the Oxford and Cambridge contingents are first as regards commissions in the Territorial Force. The figures quoted prove that military education is a reality in London, so far as students are concerned; but much remains to be done for its proper development and in the offer of educational facilities to Territorial officers. A conference on the subject is to be held at the University on January 21, at which, I understand, many distinguished authorities on the question will be present.

WESTFIELD COLLEGE.—Among the academic successes in the London University examinations of this year, it may be of interest to note that all of the nineteen candidates who entered from Westfield College for degrees in Arts or Science have been successful. These results include First Class Honours in Mathematics, History, and French, and a First Division in Science. The mark of distinction in the M.A. in Ancient Philosophy has recently been awarded to Miss K. Curtis of Westfield College.

CAMBRIDGE.

The election to the office of Esquire Bedell resulted in the return of Mr. R. Hamblin Smith, of Peterhouse. Mr. Hamblin Smith is the son of a famous coach of old days, the author of a work your correspondent remembers dimly as being about Statics. "Big Smith" had many pupils here. He was a man with a "presence" and a florid complexion, kindly, definite, and intelligible. "You know I can't stand those professors," one of his pupils is recorded to have said; "Westcott 'ventures to think'; Lightfoot 'suggests'; but the Big 'un is the man. He says, 'It is so,' and I know what to get up." Mr. Hamblin Smith, the Bedell, is a Mason, rumour says, and adds that it did not hurt his candidature to have many friends in that brotherhood and many who were not brothers.

Some while back Mr. H. O. Jones, of Clare, and his bride lost their lives climbing in the Alps on their honeymoon. His friends have gathered a fund to establish a University lectureship in physical chemistry to bear his name. Mr. Sedley Taylor has endowed a University Lectureship in Music for five years, and Dr. C. B. Rootham has been elected to fill it. Dr. Rootham is organist of St. John's College Chapel, and is generally recognized to have done a great deal in lifting the services there to the first rank in music. He is involved in all the musical activities of Cambridge, a forceful and genial spirit,

and may be relied on to use his new position to the full for the advancement of his art in the University.

Mr. Otto Beit, by a thoughtful piece of kindness, has enabled the University to make a good start with a special library of German works, and has added an endowment to carry it on year by year. The Schroeder Professor of German is to have the charge of it and select the books. Dr. Marshall, while he was still Professor of Political Economy, founded the present triennial Adam Smith Prize of £60, paying the sum from his own pocket. His successor, Prof. Pigou, has continued the same generosity. The Cobden Club for a long time gave another triennial prize, the Cobden Prize, and they were awarded turn about. The Cobden Prize is, however, to be given no more. Dr. Marshall has now offered the University stock producing an annual income of £24, with a view to putting the Adam Smith Prize on a permanent basis and making it annual. Prof. Pigou himself offers to contribute an annual sum to pay the examiners and raise the value of the prize to £40. It is a real service to the University that the two professors have done in this matter.

The question has arisen in connexion with the Medical Department whether the University would be well advised in accepting State aid. It is pled that the whole cost of scientific work and outfit rises, and that the acceptance of a State grant would liberate funds the University now gives to medicine for other purposes. It is also urged on the other side that a free University has a stronger position, and "timeo Danaos et dona ferentes." However reasonable the representatives of the present Government may be in dealing with our schools, there can be no guarantee as to their successors. The experience of Universities in the Colonies and America surely does not point toward a State connexion if we can live at all without it. It checks personal loyalty and individual benevolence. Who gives to a County Council school? Let the rate-payers and the Council see to it! And sooner or later the plan leads to interference with teaching. The history of the teaching of political economy and political science in the Universities of America should be illuminating on the effects of non-academic control—e.g. at Chicago, the State University of Kansas, Leland, Stanford Junior, and Brown Universities. Even the story of temperance teaching in Ontario schools has a warning. But some people will pay anything for money.

The death of Sir Robert Ball ends the sufferings of a great and genial figure in Cambridge life and national life. Sir Robert Ball. He was, as all your readers know, a great lecturer and an engaging writer. His fun and his friendliness won him friends, who have felt with him and his family the pain of his year or two of inability to take his old part in our life. He passes from us an honoured name.

The Fifth of November was even more futile than usual. Lamps were extinguished and crackers let off, and a lot of freshmen mixed up with crowds of town lads and boys wandered about in the mud and drizzle wondering what to do, and perhaps why they were there. Some railway palings were torn down, some fireworks were let off at Homerton College, and a visit of some hundreds was paid to the retiring Mayor (who had resolutely fined reckless motorists) and rapidly concluded by the appearance of four mounted police. A few undergraduates were fined by the proctors, two by the magistrates, and the silly performance was over.

Questions are raised as to cap and gown. Why should a member of the University think it fit to wear a cloth cap—eighteenpence halfpenny Saturday night style—over his gown instead of an academic cap? Should a Vice-Chancellor reading lessons at the opening of the Wesley Church wear a scarlet gown? Why should anybody ever want to wear a scarlet gown, unless he is married or even if he is? "Tantaene animis caelestibus —?" This letter is getting too classical. Well, should lawn tennis players have "full blues" or "half blues"?—that is not a mere academic question. Surely it touches the great heart of athletic England; all the same, I can't answer it.

WALES.

Two more of the Welsh counties—Carmarthenshire and Glamorganshire—have approved the scheme for granting Wales complete autonomy in educational matters. The arguments adduced in support of the scheme were mainly financial; and considerable emphasis was laid, in the speeches of all its promoters, on the poverty of the Welsh grants for secondary and elementary education in comparison with the Irish grants. But, unfortunately, educational reasons for this phase of Welsh Home Rule are rarely, if ever, adduced, and it would therefore be wise for the public to wait for a fuller explanation of the

(Continued on page 52.)

BELL'S NEWEST BOOKS.

ENGLISH GRAMMAR.

By S. E. WINBOLT, M.A., Christ's Hospital, Horsham, and Rev. J. E. W. WALLIS, M.A., Junior School, Christ's Hospital. In Three Parts. Strongly bound in Cloth. 8d. net each.

Just Ready, Part I.—

A First English Grammar.

By the Rev. J. E. W. WALLIS.

This course, by two thoroughly experienced schoolmasters, is designed to give the "irreducible minimum" of English Grammar in as clear a manner as possible. It should prove invaluable to those who still believe in the virtue of formal grammar, but are unwilling to spend too much time on it.

A PRACTICAL COURSE IN ENGLISH.

By E. J. BALLEW, M.A., Whitgift Grammar School, Croydon. 1s. 6d.

Designed to give the pupil a practical understanding of his mother-tongue and the use of it. The Second Part forms a generous compendium of Exercises in Analysis, Construction, Correction of Errors, turning Direct Speech into Indirect, and also a Set of Local Examination Papers in Grammar and Composition.

OUTLINE HISTORY OF ENGLISH LITERATURE.

By W. H. HUDSON, Staff Lecturer in English Literature to the Extension Board, London University. 2s. 6d. net.

"In *An Outline History of English Literature* Mr. W. H. Hudson has achieved the remarkable task of giving in some three hundred pages a really excellent summary of the rise and progress of letters in this country. . . . It is a clear and thoughtful account, not only of the achievements of great writers, but of the changes in national taste and development that influenced them."—*Scotsman*.

REPRESENTATIVE EXTRACTS FROM ENGLISH LITERATURE.

Chosen by W. H. HUDSON. viii + 338 pp. 2s. 6d. net.

The already large numbers who are using Professor Hudson's "Outline History" have been awaiting this volume, which should prove invaluable for illustrating and amplifying his brilliant narrative.

BELL'S SIXPENNY ENGLISH TEXTS.

Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham. Fcap. 8vo. With Biographical and Critical Introductions. Limp Cloth, 6d. each. A Glossary is given where necessary.

This series will be found to be very clearly printed in large type and should prove of great service to those who prefer that English literature should be read rapidly from the plain text.

FIRST LIST OF VOLUMES.

"Poems by John Milton—"Spenser's "Faerie Queene," Book I.—"Poems by Tennyson.—Selections from Byron.—"Macaulay's "History of England," Chapter III.—Gibbon's "Decline and Fall," Chapters I. to III.—Plutarch's Lives of Caesar and Cicero. "English Elegiacs.—"Selections from Chaucer.—Kingale's Heroes.

The volumes marked with an asterisk are also issued interleaved, at 1s. each, bound in cloth boards.

A SHORTER ALGEBRA.

By W. M. BAKER, M.A., and A. A. BOURNE, M.A. 2s. 6d.

This book has been produced in response to many requests from teachers in Mathematics. It is in no sense a condensation of the same authors' "Elementary Algebra," but an adaptation expressly to suit the requirements of the following and similar examinations:—London University Matriculation, Cambridge Local Preliminary and the Pass Junior Examinations, Oxford Local Preliminary and Junior, &c., &c.

A FIRST NUMERICAL TRIGONOMETRY.

By W. G. BORCHARDT, M.A., B.Sc., Assistant Master at Cheltenham College, and the Rev. A. D. PERROTT, M.A., Inspector of Schools, Diocese of Ely. 2s. 6d.

Written to supply the growing demand for a textbook on Trigonometry suitable for the lowest classes of secondary schools. To quote from the Mathematical Association Committee on the "Teaching of Elementary Algebra and Numerical Trigonometry," in 1911: "The Committee, while wishing to claim for teachers as much freedom as possible in the choice of subject, feels that Numerical Trigonometry is so important that it should be included in all cases, and, further, that this subject would be a suitable substitute for the topics now recommended for omission from the elementary course."

JUNIOR TRIGONOMETRY.

By THE SAME AUTHORS. Crown 8vo. 3s. 6d.

An enlarged edition of the above book, containing chapters on Identities, Equations, and compound Angles, will be found suitable for such examinations as the Cambridge and Oxford Junior Locals, First Class of College Preceptors, Additional Mathematics of the Central Welsh Board, Oxford and Cambridge School Certificates, Scotch Leaving Certificate (Higher Grade), and the Lower Examination in Pure Mathematics of the Board of Education.

PROBLEM PAPERS FOR PREPARATORY SCHOOLS (ARITHMETIC).

By T. COOPER SMITH, B.A., Late Scholar of University College, Oxford, Mathematical Master at St. Peter's Court, Broadstairs. viii + 108 pp. 1s. 6d.

A varied collection of original and simple problems, specially designed to enlist the interest of boys and girls through being selected from phenomena within their experience.

LATIN OF THE EMPIRE For use in Schools and Colleges.

By W. KING GILLIES, M.A., B.A. (Oxon), Classical Master, The High School of Glasgow, and A. R. CUMMING, M.A., Classical Master, Dollar Institution. New and cheaper Edition. Crown 8vo. xviii + 326 pp. 2s. 6d. net.

LIST OF AUTHORS REPRESENTED.

I. *Poetry*. Seneca—Lucan—Statius—Martial—Juvenal—Ausonius—Claudian—Prudentius—Rutilius Namatianus—Tiberianus—Pervigilium Veneris—St. Ambrose—Boethius.

II. *Prose*. Celsus—Seneca—Petronius—Quintilian—The Younger Pliny—Tacitus—Suetonius—Fronto—Apuleius—Minucius Felix—Tertullian—Lactantius—Ammianus Marcellinus—St. Augustine.

BELL'S FRENCH PLAYS

(Based on Gombert's French Drama)

Edited by MARC CEPPI, with Notes on foot of page. Paper Covers, 6d. Cloth, 8d.

These clearly printed texts will recommend themselves to all teachers of French who are on the look-out for cheap texts of the great classics.

First Volumes now ready: Molière—*Le Tartuffe*; L'Avare; *Le Misanthrope*. 3 vols.

Racine—*Les Plaideurs*. Voltaire—*Zaïre*. Corneille—*Le Cid*. Other Volumes in active preparation.

A HISTORICAL COURSE FOR MIDDLE FORMS.

By B. L. K. HENDERSON, M.A., D.Litt., and P. MEADOWS, M.A., Assistant Masters at Haberdashers' Aske's School, Cricklewood. In Four Volumes. Crown 8vo. 2s.

Vol. I.—WESTERN EUROPE.

Vol. II.—THE ENGLISH NATION: INDUSTRIAL AND SOCIAL HISTORY.

Vol. III (in preparation).—CONSTITUTIONAL HISTORY.

Vol. IV (in preparation).—POLITICAL AND GENERAL HISTORY.

Distinctive Features of this Course are:—

1. The plan for providing for the four years of middle school life between the ages of twelve and sixteen.

2. The careful adaptation of each volume to a year's school work.

3. The combination of outlines and passages from original sources.

4. The separate treatment of the important aspects of national history.

5. The employment of questions which will necessitate on the part of the pupil reasonable exercise of comparison and judgment.

ANCIENT HISTORY FOR SCHOOLS.

From the Earliest Times to the Death of the Emperor Augustus.

By E. NIXON, late Head Mistress of the Junior School, Ladies' College, Cheltenham, and H. R. STEEL. Illustrated. 2s.

For beginners in History there could be no better means of giving an idea of the slow progress of mankind through the ages than to take this admirable little outline as a reading book for use whether in or out of class.

BRITISH CHURCH HISTORY (TO A.D. 1000).

By the Rev. W. H. FLECKER, M.A., D.C.L., Head Master, Dean Close School, Cheltenham. 1s. 6d.

This book, by the distinguished Head Master of Dean Close School, Cheltenham, is the fruit of many years' experience of teaching; it is a singularly clear and interesting sketch of early British Church History, and should be welcomed by all who are preparing for the Oxford or Cambridge Locals or other such examinations. The author keeps the reader, throughout, in close touch with the original authorities, such as Bede, and is careful to lay stress on the light thrown by them on contemporary social conditions.

EARLY ENGLISH HISTORY FROM THE CHRONICLES.

By A. F. DODD, B.A., Greystoke Place, Training College. 1s. 6d.

This history covers the period from the earliest times of recorded history to the end of the Norman epoch. Its distinguishing characteristic is the extent to which quotations from contemporary authorities are introduced, with the purpose of throwing light upon the social usages, manners, and methods of thought of the Anglo-Saxons and Normans. The book is not, however, a mere compilation, as the story as told in the chronicles is tested by comparison with other evidence; but, in the author's opinion, there is a charm and a realistic quality about the *ipsissima verba* of the early records of our history which make them worth quoting, even in cases where their accuracy is not established.

THE KING'S GOVERNMENT.

A Sketch of the Growth of the Central Administration.

By R. H. GRETTON, M.A., Author of "A Modern History of the English People." 2s. net.

A most valuable contribution to a much-neglected side of constitutional development—that of the organs of central government, with special emphasis on their wonderful expansion during the last one hundred years. An invaluable book for the advanced student.

London: G. BELL & SONS, Ltd., Portugal Street, Kingsway, W.C.

details of the scheme before giving it its final approval. For if there is any disparity or unfairness in the distribution of grants, this can be remedied without the establishment of a separate council, and our unfortunate experience in the matter of grants four years ago, as the result of the formation of the Welsh Department, on the contrary tends to prove that we are just as liable to lose as to gain under separate treatment. It will be recalled that it was only after a very vigorous effort that our secondary-school grants were raised to an equality with the English grants. The efficiency of the scheme depends at least as much on the educational arrangements proposed as on its financial aspect. Apparently the whole control is to be concentrated in the hands of popularly elected councillors whose experience of education is likely to be of the most meagre character. The success of the Central Welsh Board and the University Court is generally recognized to be largely due to a strong infusion of experts who are able to guide these bodies on educational matters, but apparently no provision of this nature is to be included in the present scheme. The inevitable result will be that our colleges and schools of every type will be under the heel of an unmitigated bureaucracy. For, unfortunately, in spite of the great advance that secondary and higher education has made in Wales in recent years, our average councillor has so far been untouched by it. Only a very small minority is capable of dealing with such academic questions as vitally affect our schools and colleges. Objection is also raised to the scheme from another quarter—the supporters of the non-provided schools. They seem to have a wholesome fear of any controlling body on which the average Radical County Councillor predominates. But this is a political aspect of the question which we do not propose to discuss.

Some time ago the financial condition of the Carnarvonshire intermediate schools was a prominent subject of discussion, for one or two of them were supposed to be on the verge of bankruptcy, unless the Government or the Council came to their rescue. It is therefore rather strange to read that at the last meeting of the County Education Committee, complaint was made that the County Council had actually decreased the secondary-education rate by one-eighth of a penny! We are driven to believe either that there was no reason for the distressful accounts we heard from the schools, or that the County Council has shown its unfitness for the management of secondary education. It is certainly an anomalous situation, demanding some explanation.

Under the scheme for establishing a Welsh medical school it is provided that the whole of the cost must be taken at a University college. This regulation therefore puts an end to the practice of many medical students of passing their first examination while at school, and some hardship is likely to result from the change, especially as regards expense. Dr. Hepburn, of Cardiff University College, has always been a strong advocate of the policy now adopted by the Welsh University, as he considers that it is entirely in the interest of the student.

Prof. Sir Edward Anwyl, M.A., has been appointed to the first Principalship of the new Caerleon Training College for Elementary-school Teachers. The college is fortunate to have secured the services of such an experienced educationist as Sir Edward; for as his interests have hitherto mainly been with secondary and higher education, he may be able to infuse a new spirit into the training of the elementary teacher. Sir Edward has held the Professorship of Welsh at the University College of Wales, and has acted as Chairman of the Central Welsh Board since the death of Mr. Humphreys Owen. In the latter position he has worked strenuously for the success of our system of intermediate education.

Prof. Foster Watson, whose retirement is noticed elsewhere, is succeeded by Mr. C. R. Chapple, M.A., who has been appointed Professor of Education. Further, Miss Dalrymple, B.Sc., succeeds Miss A. Kimpster, upon her retirement, as Lecturer and Mistress of Method. The following appointments have also been made:—Miss Hermia Rees, M.A., Lecturer in German; Dr. Ethel Du Freyne, D.Sc., Lecturer in Botany; Mr. Malcolm M. Lewis, B.A., LL.B., Lecturer in Latin; Mr. C. R. Berry, B.A., Chemical Demonstrator; and Mr. Stanley Smith, M.Sc., B.A., Lecturer in Geology.

SCOTLAND.

The Senate has appointed Mr. J. Arthur Thomson, Professor of Natural History in the University of Aberdeen, to be Gifford Lecturer for the years 1914-15 and 1915-16. The Lord Rector, the Earl of Aberdeen, has appointed Mr. William Low, of Blebo, to be his Assessor on the

University Court. Mr. A. J. B. Wace, M.A., Lecturer in Ancient History and Archaeology, has resigned his lectureship, on his appointment as Director of the British School of Archaeology at Athens. Mr. Wace will in future give an annual lecture at St. Andrews on the latest excavations in Greece. A tablet in memory of the late Mr. Andrew Lang, LL.D., has been placed in the University Chapel. The tablet was designed by Sir William Richmond, R.A. Prof. McKeufie is to be inducted to the Chair of Chemistry on January 17.

The Senate has appointed Prof. Graham Kerr as one of its assessors on the University Court, in succession to Prof. Bower. Mr. A. J. Balfour will begin his first course of Gifford lectures on January 12.

The lectures will be given on Mondays, Wednesdays, and Fridays during January and part of February. Mr. Peter Pinkerton, D.Sc., a distinguished graduate of Glasgow University, has been appointed Rector of the Glasgow High School. Mr. Peter Ramsay, B.Sc., of Glasgow University, has been appointed to succeed Mr. Pinkerton as head of the Mathematical Department in George Watson's College, Edinburgh, and Mr. John Miller, B.Sc., who was formerly a lecturer in Glasgow University, has been appointed to a post in the same department. Mr. Robert Jack, B.Sc., of Glasgow University, has been appointed Professor of Physics in the University of Otago, Dunedin, New Zealand. Since 1909 he has been Lecturer in Physics at Queen's University, Belfast. On November 28 Sir William McCormick, who was chairman at the annual dinner of the Glasgow University Club, London, gave some interesting statistics regarding the progress of Glasgow University. He had been asked by an American professor what Glasgow University "would stand at if it was being bought over," and his answer was that the value would be £4,500,000 or £5,000,000, and that this would not be accepted unless another £5,000,000 were given for extensions during the next generation. Since 1875, when the two buildings which cost about £400,000 were opened, about £500,000 had been spent in extensions. The University income in 1875 was about £28,000 a year, and in 1912 it was nearly £92,000. In 1875 there were 1,600 students, and in 1912 2,800. The number of professors had increased from 26 to 36, the number of independent lecturers from 1 to 75, the number of assistants from 12 to 60. In 1875 the salaries of lecturers and assistants amounted to £1,680; in 1912 the amount was £23,000. The contributions of students in fees, &c., were, in 1875, £12,000, and in 1912 £43,000. The Glasgow University Women's London Club has been formed, and its first annual dinner took place in London on December 6.

Prof. Japp, who has occupied the Chair of Chemistry since 1890, intends to retire at the end of the present academic year. The University Court has approved plans for the restoration of the Earl Marischal's tomb in Dunnottar Churchyard. More than half of the amount required for the purpose has been subscribed.

The Senatus has appointed Sir William M. Ramsay, D.C.L., Emeritus Professor of Humanity in the University of Aberdeen, to be Gifford Lecturer for the period 1915-17. The subject of his lectures will be "The Early Religion of the Aegean Lands and its subsequent modifications." Dr. W. T. Gordon, Lecturer in Palaeontology at the University of Edinburgh, has been appointed Lecturer in Geology at King's College, London. He is a distinguished graduate of Edinburgh and Cambridge.

Lord Rosebery, Chancellor of Glasgow University, presented diplomas to the new associates of the Royal College, Glasgow, on December 11. The College has recently been affiliated to the University, and this was the first function in which both institutions took part. Lord Rosebery spoke of the great change that has taken place in the conception and development of Universities. Not long ago it was held that "University teaching should be conducted in a cloister, remote if possible from a railway, that it should produce learning and research, but that the people should come to the Universities. The great change now has been that the Universities have come to the people." "Instead of the cloister, they must be planted in the largest and busiest cities that can be found, to the mutual and enormous advantage of both. There is no city now of a certain size that does not insist on having a University of its own. It would as soon be without its Corporation."

The building of the new Training College for the Glasgow Provincial Committee will be begun early in the year. The new college has become necessary because of recent educational developments. In 1906, when the Provincial Committees were instituted, the number of students in training in the two Glasgow colleges managed by the Presbyterian Churches was about six hundred.

An OFFICIAL trial, in any School throughout the Empire, for one month, FREE of cost or obligation to purchase, will be granted.

By Royal Warrant
of Appointment

To His Majesty
King George V.

'DUSMO'
The Dustless Sweeping Powder

A Dust-free and a
Happy New Year
secured by the use of
'Dusmo.'

The removal of dust prevents the spread of infection. — Keep your School healthy by the use of **'DUSMO.'**

**PRACTICAL.
EFFICIENT.
ECONOMICAL.**

'DUSMO' can be used any and every day of Term. The Schoolroom is available immediately ; there is no tedious drying or 'dusting' to wait for.

'Dusmo' is the cleanest, quickest, and most economical sweeping powder for effectively freeing your school from dust. *Dust simply can't exist where 'Dusmo' is used.* It is manufactured in two forms—'Dusmo' for use on carpets, and 'Dusmo' 'B' especially prepared for use on wood, linoleum, stone or marble floors. 'Dusmo' contains no oil or grease, and is disinfectant.

**DUST CANNOT RISE.
THE FLOOR IS SCAURED.
RESULT: A CLEAN SWEEP.**

The 'Dusmo' method *absolutely* prevents the dust from rising *and removes it.* When the accumulated dust has been absorbed the quantity of 'Dusmo' used daily is very small, and the cost would be even *cheaper than sawdust.* The old method of using water or damp sawdust coagulates the dust, leaving it sticking to the floor to return to dust again when dry.

DUSMO COMPANY, LTD.,

11 QUEEN VICTORIA ST., E.C.
Works: STRATFORD, ESSEX.

The average number at present is about twelve hundred. The increase is in great part due to the abolition of the pupil-teacher and to the fact that after 1914 no one will be allowed to become a teacher in a Scottish school under the Education Department unless he has been fully trained and has received his certificate. The existing colleges are at present overcrowded and their equipment is quite insufficient for modern requirements. The site of the new college at Jordanhill, on the outskirts of the city, extends to about 60 acres. Three separate blocks of buildings are to be erected, as provision has to be made for the college, a demonstration school for eight hundred pupils, and several hostels. The college, which is to accommodate twelve hundred students, will be built in the Scottish Renaissance style. Provision is made for forty-five departments, and the floor space, exclusive of corridors, stairs, &c., will be about 76,000 square feet. There will also be four gymnasias and ample space has been provided for outdoor games, gardens and Nature study, as well as for manual training. The demonstration school will provide for both primary and higher grade pupils. The hostels will each have full accommodation for fifty students, and each hostel will have its own dining room, library, reading room, &c., and will be under the charge of a separate warden. The total cost of the grounds and buildings will be about £200,000.

The Education Department has issued regulations regarding the grants to be made for the medical treatment of necessitous school children. The most important points in the regulations are: (1) that the grant for medical treatment will (as in England) be paid only at the rate of one-half of the expenditure, the remainder to be raised from local sources; and (2) that, while the grant will be based on a consideration of the cost of the treatment of necessitous children only, School Boards are not precluded from arranging for the treatment at a school clinic of other children, provided such charges are made as may reasonably be expected to result cumulatively in the school fund being relieved of any cost attributable to the treatment of non-necessitous children.

The Association for Securing Higher Instruction in Rural Schools has formulated its minimum demands as follows:—(1) That, so far as conditions permit, higher instruction up to the end of the third year of the intermediate course should be within walking distance of every child in Scotland able to profit by it; and (2) that such higher instruction given in primary schools be placed on the same level as the intermediate course in the matter of subjects and grants,

so that a scholar may pass from the primary school to the intermediate course without loss of time, if he develop the desire and ability to go to a secondary school. A conference, held by the Stirling Branch of the Educational Institute and addressed by members of Parliament and leading teachers, has declared in favour of extended administrative areas as the true solution of the problem.

IRELAND.

Since the end of last month the results of the Moderatorship Examinations in Natural Science and Modern Literature have been declared. In the former subject the women students have secured one Senior and one Junior Moderatorship; in the latter four Senior Moderatorships (including first place) and four Junior—eight out of the eleven awarded. Of sixteen Senior Exhibitions awarded, six fall to women students.

The degrees gained at the Autumn Examinations were conferred at a Commencement on December 22, when there was a large public attendance.

Another of the Senior Fellows has passed away—the Rev. Thomas Kingsmill Abbott, D.D., who died on December 18 at the ripe age of eighty-four. Dr. Abbott was Senior Proctor at the time of his death, and had been Librarian since he succeeded the late Dr. Ingram in that post in 1887. He gained his Fellowship in 1854, and between 1868 and 1900 held successively the Chairs of Moral Philosophy, Biblical Greek, and Hebrew in the University. He was a versatile scholar and the author of many learned treatises covering a wide range of subjects.

The Chair of English Law in Galway College has been filled by the appointment of Mr. R. J. Sheehy, B.A., LL.B.

The Commissioners of National Education have just formulated a scheme which, it is hoped, may come into active operation during the next school year, for providing facilities for the dental examination and treatment of pupils. Local schemes may be submitted to the Commissioners, who are prepared to contribute half the cost of the necessary clinical equipment and treatment. Already a successful experiment has been made in dental inspection in a few districts. If this can be extended we shall at any rate have made a good step

An Introduction to the Study of English Literature.

By EDITH KIMPTON, M.A., A.K.C.
(Author of "The Story Thread.")

Crown 8vo. Cloth. 296 pp. Price 2s.

This book has been written in response to inquiries for a work similar to "The Story Thread," but of a more advanced character. Overlapping has, therefore, been avoided wherever possible. The book is so designed that it may be used either as a textbook or as a reader, but it does not profess to be exhaustive. Book Ways is, daringly perhaps, brought up to present times.

"We have read it with much pleasure, an experience which will be shared by all who care to invest two shillings in this really captivating 'Introduction' to the Treasure House of English Literature."—*The Schoolmaster*.

"We have opened to us a really delightful and enticing entrance into the realms of literature. Pick up the book for a glance, and if you have time you will be lost in its well-written pages. Miss Kimpton is to be congratulated on her selections and the captivating manner in which she sets them before her readers."—*The Head Teachers' Review*.

PRACTICAL SPEECH CULTURE.

By ALFRED C. COX.

With a Preface by GEO. E. CLARK, Esq., Principal and Founder of Clark's College. Crown 8vo, cloth. Price 1s. net (postage 1½d.). Containing numerous Original Photographs and Diagrams specially prepared for this work.

"Rarely have we seen so much valuable, practical help to young people, as well as to business and professional men and women, crammed into so small a compass. Mr. Cox has given us a book which deserves to be read, re-read, and studied carefully by all who wish to be successful in life. Especially, perhaps, does it appeal to teachers."—*The Schoolmaster*.

RECENT PUBLICATIONS.

A DIGEST OF BRITISH HISTORY.

By S. H. McGRADY, B.A.

With an introduction by OSCAR BROWNING.

Crown 8vo. Cloth. 341 pp. Price 2s. 6d.

Also obtainable in three parts as follows:—**Part I**, n.c. to 1485; **Part II**, 1485 to 1789; **Part III**, 1789 to 1912. Price 1s. each.

Mr. OSCAR BROWNING says:—"I can conscientiously recommend it, both to teachers and learners. The first will find it an excellent syllabus for oral teaching, without which no efficient instruction in history can be given, and the second will find it useful in revising what they have been taught, and in breaking new ground for themselves. For these reasons I venture to predict for it a wide circulation."

"A triumph in filing and pigeon-holing facts."—*Saturday Review*.
"The volume will be very helpful in showing the important things of each period in their due relation, and in guiding the student in revision."—*The Educational Times*.

"This is not a mere date book, but a very full survey of facts. . . . If rightly used, the book will be found of great value, and most teachers will probably agree with the statement in Mr. Oscar Browning's commendatory preface that 'it will not teach history itself, but it will be a great assistance in learning it.'—*The Educational Record*.

A COMPARATIVE GEOGRAPHY OF THE SIX CONTINENTS.

By ELLIS W. HEATON, B.Sc., F.G.S.

Crown 8vo. Cloth. 219 pp. Price 1s. 9d.

Containing 119 Maps and Diagrams, all new and specially drawn for this work and 10 Full-page Photographic Plates. Treated under two main divisions—(a) The Three Northern Continents; (b) The Three Southern Continents.

"The material is good, the deductions are safe, and the method of treatment should yield satisfactory results."—*The Educational Times*.

towards the system of medical inspection which is so much needed in Irish primary education.

From a paper read recently before the Statistical and Social Inquiry Society of Ireland by Mr. W. Webb, LL.B., it is interesting to learn that the development of technical education has been rapid since the Act of 1899. Within ten years after its introduction the number of students in evening technical schools reached 4,859 for the province of Leinster, of whom 1,619 were in commercial classes, 3,501 for Munster (787 commercial), 698 for Connaught (163 commercial), and 10,709 for Ulster (2,402 commercial). "In considering our success," said Mr. Webb, "I think that everyone outside the ranks of officialdom will experience a mild surprise at finding a Government Department so adaptive and so sympathetic in its methods." At present there is a great need for day classes and day commercial schools: so far, however, the Department has refused to undertake the expenditure necessary for such a step.

SCHOOLS.

CAMBERWELL GROVE, S.E., MARY DATCHELOR GIRLS' SCHOOL.—Among students working at the Datchelor for the Final B.A., four out of five obtained the degree this last autumn. Dorothy Taylor gained a First Class; Doris Smith, Dorothy Pascoe, and Eugénie Alexander obtained Second Classes (External Degree). Muriel Talbot, a student at Holloway College and formerly one of the Datchelor girls, gained Second Class Honours in Botany in the B.Sc. Examination. Dorothy Purnell, also an old Datchelor girl and a student at King's College, passed the B.A. Examination with Second Class Honours in English. On November 21 Sir Melvill Beachcroft presided at the annual distribution of University Certificates won by girls in the school in 1913, and of a number of certificates for music, both vocal and instrumental, as well as of prizes for Nature study, and Lady Beachcroft distributed the certificates. Sir Melvill made a most interesting and encouraging speech, and there was a very large gathering of pupils and their friends. A short concert followed the distribution. The presence of the Mayor and Mayoress of Camberwell was much appreciated. Their daughter was the winner of a prize for a very beautiful Nature study collection. She is also the holder of one of the scholarships granted by the Clothworkers' Company to a certain number of pupils in the School on the results of examinations held each summer.

HARROW COUNTY SCHOOL.—The series of winter lectures at the School was continued in an interesting paper by Mr. Thomas Dunhill, on "Musical Curiosities," given to a very large audience. The monthly musical recital to the boys was given by Mr. Pettersson and Mr. Haswell, with songs and pianoforte solos, which were much appreciated. The School troop of Scouts has been very active this month. On Saturday, November 15, there was a field day, in which a hundred and fifty boys participated, and on the following day the new colours were presented in St. Mary's Church by the Rev. Lionel Ford, Head Master of Harrow School.

MALVERN COLLEGE.—Mr. F. S. Preston has been appointed Head Master in succession to Canon Sydney James, who has retired after sixteen years of service. Mr. Preston was educated at Marlborough and Pembroke College, Cambridge. He graduated in 1897, First Class (Third Division) Classical Tripos, and has since been an assistant master at Marlborough, and for some years house master of "Littlefield."

SEAFORD, THE DOWNS SCHOOL.—Miss Lucy Robinson has resigned. Her successor is Miss Cameron, History Mistress at St. Felix School, Southwold, who passed in Honours in the Final History School at Oxford.

SEDBERGH, BALIOL SCHOOL.—The annual entertainment given by the pupils of Baliol School, in the Public Hall, Sedburgh, on December 11, took the form of a play, entitled "Pygmalion and Galatea," dramatized by Miss Skeat, Ph.D., on the lines of the poem by William Morris. The designs for the costumes were taken from Flaxman's illustrations to Homer, and the scenic background, representing a forest glade in Greece with sunrise over the distant sea, was painted by the principals. The words of the songs were taken from Carman's translation of Sappho's lyrics, set to music by Miss Skeat and Miss Copeland. The proceeds of the entertainment will be devoted towards the Swimming Bath Fund, towards which about £40 are still required.

WORCESTER HIGH SCHOOL FOR GIRLS.—The annual Speech Day took place on December 6, when the prizes and certificates were distributed by the Lord Bishop of Worcester. Canon Chappel (who took the chair in the absence of Lord Cobham) announced that the School was now an endowed school, no longer a dividend-paying company. He also made the announcement that in future it would be called the "Alice Ottley School," in memory of its first head mistress, Alice Ottley (1883-1912).

HACHETTE & COMPANY.

LONDON: 18 KING WILLIAM STREET, CHARING CROSS.

JUST PUBLISHED.

FRENCH LESSONS ON THE DIRECT METHOD.—SENIOR COURSE

By MARC CEPPI.

French Master, Whitgift Grammar School, Croydon.

192 pages, crown 8vo, cloth, 2s.

Compiled to meet the requirements of Candidates for the College of Preceptors (First Class), Oxford and Cambridge Senior Locals, London University Matriculation and Army Entrance Examinations. Based on Questions set during the last ten years. Grammatical points are judiciously extracted from typical pieces of French prose, whilst the Questionnaires are framed to give ample scope for lengthy replies. The Marginal Guide, Revision Lessons, Final Tests, and other popular features of the Author's Intermediate Course are retained and the link with its predecessor carefully preserved.

By the same Author.

French Lessons on the Direct Method.

Beginners' Course (5th Edition, 1914). (300 Nouns in Common Use, 160 Verbal Forms, 100 of the most usual Adjectives, &c., and over 300 Practical Exercises for Oral and Written Work, with Reproductions of Hölzel's Pictures of the Four Seasons.)

122 pages, crown 8vo, cloth, 1s. 6d.

French Lessons on the Direct Method.

Junior Course (3rd Edition, 1913). (360 Nouns, 88 Verb Forms, 124 Adjectives, Adverbs, &c., forming with the "Résumé" of the Vocabulary in the "Beginners' Course," a total of 1100 essential words.)

136 pages, crown 8vo, cloth, 1s. 6d.

French Lessons on the Direct Method.

Intermediate Course (3rd Edition, 1912). (Containing a Vocabulary of 1400 Words, 274 Exercises, 10 Revision Lessons, &c.)

200 pages, crown 8vo, cloth, 2s.

LA CLASSE EN FRANÇAIS

A New Intermediate French Course on Reform Lines, based on E. Soulié's "Tour de France."

With "Explications" in simple French to enlarge the Pupil's Vocabulary, "Questionnaires" and "Devoirs de Rédaction," providing material for Free Composition, "Vocabulaires," "Exercices de Grammaire," for Oral and Written Practice, &c., &c.

By E. J. A. GROVES, L. ès L.,

Senior French Master, Bradford Grammar School.

230 pages, crown 8vo, with Illustrations, cloth, 2s.

The **Questionnaires** bring out the salient points in the narrative. By amalgamating Questions and Answers, a Connected Summary can be obtained which provides abundant material for **Reconstruction** and **Free Composition**.

The **Vocabulaires** consist of **Questionnaires** or **Exercices** dealing with some particular subject borrowed from the immediate circle of thought of the pupil and which has been met with during the reading of the extract.

Numerous **Exercices de Grammaire** deal with all the essential points of French Grammar which can be well assimilated by boys and girls of 14 or 15.

**HORLICK'S
MALTED MILK****MALTED BARLEY, WHEAT, and MILK in Powder Form**

The wholesome nutrition of pure rich milk and choice malted grain, supplying strength and vigour, with little tax on digestion. Instantly ready for use by stirring briskly in hot or cold water.

NO COOKING REQUIRED.

Equally useful to both

TEACHERS AND SCHOLARS.

A glass of "Horlick's" is an ideal lunch, as a delicious and nourishing food-drink may be easily prepared in a moment. **Keep a bottle in your desk.** Horlick's Malted Milk will be found to supply the strength and energy so necessary during the long hours of study, and its use will prevent lassitude.

An efficient corrective of insomnia, taken hot before retiring.

HORLICK'S MALTED MILK LUNCH TABLETS.

A delicious food confection, to be dissolved in the mouth. Especially useful during study for exams.

In Glass Bottles, 1/6, 2/6, 11/-, at all Chemists and Stores. Liberal Sample, either in Powder or Tablet Form, for trial free by post on request.

HORLICK'S MALTED MILK CO., SLOUGH, BUCKS.

HARRAP'S LATEST PUBLICATIONS**A Practical Course in Secondary English**

By GEORGE OGILVIE, M.A., Broughton Junior Student Centre, and EDWARD ALBERT, M.A., George Watson's College, Edinburgh. With Complete Index. Crown 8vo, 500 pages. 4s. 6d.

Also in Three Parts:—

Part I.—**Style.** 184 pages, 1s. 6d.Part II.—**Form.** 176 pages, 1s. 6d.Part III.—**History of the English Language.** 160 pages, 1s. 6d.

Also Parts I and II in One Volume. 350 pages, 3s.

This book is on the latest lines, and carries on the principles of Mr. Kellow's *Practical Training in English*.

Great Names in English Literature

In Four Volumes. By EDITH L. ELIAS, M.A.

From Chaucer to Bunyan. Just Ready. Crown 8vo, 244 pages, 1s. 6d.

This series is designed to include all the authors who are likely to be read in schools. Whilst not pretending to be a complete history of English Literature, it will serve as an excellent introduction to more advanced study.

English Literature in Prose and Verse

In Five Volumes. Vols. I and II Now Ready.

Vol. I.—**From Beowulf to Chaucer.** By AMY CRUSE. Crown 8vo, 112 pages, 1s.

Vol. II.—**From Chaucer to Bunyan.** Selected by E. L. ELIAS, M.A. Crown 8vo, 224 pages, 1s. 3d.

The extracts in this series are not too short, and wherever possible they are complete in themselves. Whilst this course is specially designed to accompany the above, it can be used with any other textbook.

Many new titles have recently been added to the following well-known series, full List of which will be sent post free upon application.

The Poetry and Life Series**Told Through the Ages Series****All Time Tales****New Historical Series****French and German Texts, &c.****Magnetism and Electricity**

A new Elementary Practical Course. By J. C. KIRKMAN, B.Sc., Head of the Physics Department, Swansea Technical College. With many Diagrams. Crown 8vo, 144 pages, 2s. 6d. net.

Mes Premiers Pas en Français

By M. L. CHAPUZET, Wakefield Grammar School, and W. M. DANIELS, M.A., D.Litt., Westminster City School. Illustrated in Colour and with Line Drawings. 128 pages, crown 8vo, 1s. 3d. Also with Picture Vocabulary, 1s. 6d. Vocabulary separately, sewed, 4d.

This book is for boys and girls of seven to ten, an age too tender to be tortured by formal grammar, but eagerly responding to a natural method which adapts itself to their normal interests. Grammar is indeed introduced, but in gradual and, it is to be hoped, painless doses; the vocabulary, though fairly large, should be easy to master by the aid of the pictures and the grouping of connected words.

Eight Coloured Wall Plates to accompany the above, mounted on Boards, eyeletted and strung, price 3s. net each; or 22s. 6d. net the Set of Eight. Also Mounted on Rollers, map style, 4s. net each; or 30s. net the Set of Eight.

For Particulars write for *Illustrated Prospectus*.

Elementarbuch der deutschen Sprache

By A. WERNER-SPANHOOFD. Crown 8vo, 288 pages, 2s. 6d.

A more elementary and differently arranged edition of the author's "Lehrbuch der deutschen Sprache," one of the best known courses of elementary German.

N.B.—The Publishers will be glad to forward to any address their New Complete Catalogue, Special New Descriptive List of Works on Modern Languages, **comprising more than 400 volumes:** Prospectuses of above and many other Books and Series on New and Interesting Lines.

London: GEORGE C. HARRAP & CO. 3 Portsmouth St. Kingsway W.C.

PRIZE COMPETITIONS.

THE Translation Prize for December is awarded to "Gothicus." *Proxime accesserunt* : "Palmar" and "W.H.S."

The Winner of the Translation Prize for November is Miss E. Wishaw, Corran, Watford.

Située dans l'arrondissement de Mirecourt, en cette partie des Vosges qui forme transition entre la plaine et la montagne, cette villa se détache d'un coin de sentier en retrait au tournant de la route qui, après avoir longé, monotone, une interminable forêt, dévale brusquement en surprise panoramique sur une vallée encaissée d'un effet saisissant, où rougeioient, enrubannés de verdure, les toits du hameau de la Hutte. Ce site engoncé rappelle par le pittoresque de son imprévu et les découpures de sa vallée certains paysages de la Suisse, notamment du canton d'Aarau ; mais il s'en distingue par une tonalité autochtone et le contraste qui s'accuse entre la vision et l'impression. Malgré l'aspect riant du paysage d'où émerge d'un fouillis de plantes sauvages grimpantes la villa "Feu Follet" adossée à un bloc de roches schisteuses et que surplombe, au sommet d'un monticule de terres rapportées, le clocher d'une coquette chapelle, une sensation mélancolique, sévère même, se dégage de l'ensemble du tableau. Dans le prolongement de la vallée, une succession d'étangs piqués de chaque côté d'une rangée de pins centenaires, se profile en contrebas. Leurs eaux noirâtres et pesantes donnent à l'œil une réverbération lourde. Et plus loin, dans la forêt profonde, pas un chant d'oiseau, nulle perspective d'êtres animés ; un silence morne le jour, coupé la nuit par le cri strident de la chouette ou le rauque appel d'amour des grands chasserots aux ailes jaunes.

By "GOTHICUS."

Situated in the district of Mirecourt, in that part of the Vosges where plain and mountain meet, the villa stands at a little distance from the pathway, just at the bend of a long, uninteresting road, which, after skirting the side of a forest, drops suddenly, with striking panoramic effect, to a deep valley, where the hamlet of La Hutte

comes in sight, with its red-tiled roofs, festooned with foliage. This rugged bit of scenery, by its unexpected picturesqueness, and the broken contours of the valley, calls to mind certain Swiss landscapes, especially those in the canton of Aarau ; but it differs from them in its peculiar character and in the contrast that exists between what is seen and the impression received. Amid a confused tangle of climbing wild plants the villa "Feu Follet" comes into view, with its background of slaty rock, and higher up, at the summit of an artificial mound of earth, the bell tower of a pretty chapel rises above the tree tops ; but in spite of the smiling aspect of the landscape the general effect of the picture is to inspire an almost depressing feeling of sadness. Lower down, as the valley opens out, there stands out prominently, bordered on either side by a row of century-old fir trees, a series of pools, whose dark sullen waters reflect a gloomy light. Farther away, in the depths of the forest, there is not a bird note or a sign of a living creature : in the daytime a dead silence prevails, broken at night by the deep-toned hooting of the wood-owl or the hoarse love song of the large yellow-winged screech-owl.

We classify the 96 versions received as follows :—

First Class.—Menevia, Carolus, Gothicus, W.H.S., Doria, Eicarg, Chingleput, Sandy, Competitor, Palmar, Houdaille.

Second Class.—Chrysanthème, St. Quintin, Marcus, A.M.N., Nessko, Soufflet, Octave, Espérance, Staunton, Espoir, Chislehurst, Roseleigh, Horbez, Nothie, Garnet, Pamela, Emil, Lavengro, Petite Thérèse, Hebrew, O.M., Xantippe, Zulu, Sirach, Greenfinch, Stourport, Mousmée, L.W.S., The Curé, Primrose, H.B., Kareen.

Third Class.—G.J.N., R.M.M., Luttante, Leander, Nimoise, Red Indian, Camillo, K.M.B., E.M.W., Moriando vivo, Lilian May, Holzbrücke, Enthousiaste, Nil desperandum, Backfish, Espérance (Carlisle), Kensington, E. de J., Banshee, Lavender, Never say Die, Leda, Nemo.

Fourth Class.—Speedwell, Dewdrop, I.I.S., Hebe, South Downs, Chatte Blanche, Rocket, Allobroge, Macnamara, Corbeau, Sunderland, M.O.R., Myosotis, M.F., Marguerite.

Fifth Class.—Opaline, Iris, Hawk, J.A., Salvia, M.N., A.O.U., Ely, M.A.P., Quill, Girlie, Nil, R.K.M., Owlet, Dudie, Rue, O.S., Corin.

(Continued on page 60.)

MILLS & BOON'S NEW BOOKS

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. Applications should state the number of copies that will be required if the book asked for is introduced.

A NEW SCHOOL GEOMETRY. By RUPERT DEAKIN, M.A. 304 pages, with Index and Answers to Numerical Exercises. 2s. 6d. Also in Two Parts.

Part I.—Lines, Triangles, and Quadrilaterals. 1s.

Part II.—Areas and their Algebraical Illustration and the properties of the Circle. 1s. 6d.

This book contains what the writer believes to be the best proofs of all the theorems and problems that are usually required by the Universities and other examining bodies as being essential to a sound knowledge of Elementary Geometry. Great attention has been paid to the solution of Riders, not only by explaining various methods of attacking a Rider and by carefully graduating each set of Exercises, but also by introducing Exercises and Riders leading up to each proposition. A preliminary course of practical work is indicated for beginners, and questions have been set on the simpler solid bodies. More than 1,700 carefully graduated.

EXAMPLES AND TEST PAPERS IN ALGEBRA.

By W. J. WALKER, M.A., Senior Mathematical Master County School, Wrexham. Crown 8vo. With Answers. 1s. 6d. Without Answers 1s. 3d.

A new Algebra, which is far more than a mere book of Exercises, and contains many features that will interest teachers of algebra by modern methods.

THE TEMPEST. Edited, with Questions, Notes, and Appendixes, by FRANK JONES, B.A., Assistant Master King Edward's School, Aston. Crown 8vo, 1s. Plain Text, 6d. net.

This Edition is based on the recommendations contained in Circular 753 of the Board of Education on the teaching of English Literature. It also has very clearly in view the requirements of the Oxford and Cambridge Local Examinations.

DIRECT METHOD FRENCH TEXTS

Edited by R. R. N. BARON, M.A.

The stories in this series of Direct Method French Texts have been chosen as being both good literature and stories likely to appeal to those by whom they are intended to be read.

The Questionnaires and Exercises provide ample material for homework, and contain, besides questions suggested by and based on the text, a wide range of grammar practice given in such form as to involve the use of common sense, in addition to knowledge of inflexions and syntax. The first volumes are :—

Tamango and Jose Maria le Brigand. 1s.

These are two of Mérimée's best short stories, and in each the thrilling interest is sustained to the very last page. The book is suitable for middle and lower forms.

Pierrille. By JULES CLARETIE. 1s. 6d.

This story by the eminent director of the Comédie Française is a delightful idyll of peasant life, filled with dramatic incident, and true to nature in every detail. It has been edited for upper forms.

La Belle Nivernaise. By ALPHONSE DAUDET. 1s. 6d.

A charming example of this great writer's work, telling in short, simple, and pithy sentences the loving sympathy of the poor for their poorer brethren. An ideal text for junior forms.

EXERCISES IN FRENCH FREE COMPOSITION

FOR UPPER CLASSES. By R. R. N. BARON, M.A., French Master Cheltenham Grammar School. 185 Exercises. Fourth Edition. 1s. 6d.

WE UNDERTAKE

the entire production, including the taking of Photographs and making of Blocks.

WE ALSO SUPPLY

REPORT FORMS,
ACCOUNT FORMS,
HEALTH CERTIFICATES,
APPLICATION FORMS,
MAGAZINES,
TESTIMONIALS, &c.

Please write us for Specimens.

J. & J. PATON,

143 CANNON STREET, LONDON, E.C.

The landscape from Houdaille's last novel is not a model of French style. The first sentence is somewhat clumsy and long-winded, and "autochthonous tonality" strikes us as "precious" in French and is intolerable in English. We must be content with "scheme of colour peculiar to the soil." It would be an improvement to break up the sentence: "The villa is in that part of the Vosges . . . in the arrondissement (or electoral district) of M. It stands in the angle formed by a lane [*sentier en retrait* is a "back path"] which diverges at a bend in the high road which . . . makes a sudden dip and reveals with startling effect a panoramic view over," &c. *Enrubannés de verdure* is not "festooned with foliage," but "framed in greenery," the copses or meadows from which the red roofs stand out. *Engoncé* is not "rugged," but "sequestered," properly of someone muffled up, smothered in his clothes. *Qui s'accuse*: not "which exists," but "the marked contrast between the actual view and the impression it leaves." *Centenaires*: "secular" or "immemorial," not "centenary." *Se profile en contrebas* (shirked in the prize version): "in descending perspective." "Reverberations" of light is not English. Turn "The eye catches the dim metallic gleam of their dark stagnant waters." *Chasserots* is a *patois* word for which competitors have ransacked in vain the dictionaries. It cannot be the nightjar, which has not yellow wings, nor the dragon-fly (!), but I accepted any possible guess. "Gothicus" is probably right in conjecturing that it is a by-form of *chasseton*, a common name of the *grand duc*.

Monsieur Boissetot has furnished me with the following note:— "En patois bourgignon et franc-comtois, j'ai entendu appeler 'chass(é)rots' certains grands rapaces nocturnes au plumage jaunâtre tirant presque sur l'orange, le ventre et le dessous des ailes sont à peu près blancs. Leurs ailes déployées dépassent quelquefois un mètre d'envergure. Les deux spécimens que l'on m'a montrés avaient été tués en 1911 à la tombée de la nuit par un chasseur à l'affût au canard."

A Prize of Two Guineas is offered for the best translation of the following extract from Goethe's "Eloge of Wieland":—

Shaftesbury, den ich nur zu nennen brauche, um jedem Gebildeten einen trefflichen Denker ins Gedächtnis zu rufen, Shaftes-

bury lebte zu einer Zeit, wo in der Religion seines Vaterlandes manche Bewegung vorging, wo die herrschende Kirche mit Gewalt die Andersgesinnten zu bezähmen dachte. Auch den Staat, die Sitten bedrohte manches, was einen Verständigen, Wohlthätenden in Sorge setzen muss. Gegen alles dieses, glaubte er, sei am besten durch Frohsinn zu wirken; nur das, was man mit Heiterkeit ansehe, werde man recht sehn, war seine Meinung. Wer mit Heiterkeit in seinen eigenen Busen schauen könne, müsse ein guter Mann sein. Darauf komme alles an, und alles übrige Gute entspringe daher. Geist, Witz, Humor seien die echten Organe, womit ein solches Gemüt die Welt anfasse. Alle Gegenstände, selbst die ernstesten, müssten eine solche Klarheit und Freiheit vertragen, wenn sie nicht mit einer nur anmasslichen Würde prunkten, sondern einen echten, die Probe nicht scheuenden Wert in sich selbst enthielten. Bei diesem geistreichen Versuch, die Gegenstände zu gewältigen, konnte man nicht umhin, sich nach entscheidenden Behörden umzusehn, und so ward einerseits der Menschenverstand über den Inhalt, und der Geschmack über die Art des Vortrags zum Richter gesetzt.

An einem solchen Manne fand nun unser Wieland nicht einen Vorgänger, dem er folgen, nicht einen Genossen, mit dem er arbeiten sollte, sondern einen wahrhaften älteren Zwillingenbruder im Geiste, dem er vollkommen gleich, ohne nach ihm gebildet zu sein: wie man denn von Menächmen nicht sagen könnte, welcher das Original, und welcher die Kopie sei.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by January 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

Now Ready. Cloth, pp. xii, 884. Price 7s. 6d.

COUNTY OF LONDON.

THE LONDON COUNTY COUNCIL.

CIL invites applications for the position of **WOMAN LIBRARIAN** of its Education Library. The salary will be £120 a year, rising by yearly increments of £10 to a maximum of £200, and the person appointed will be required to give her whole time to the duties of the office. Preference will be given to candidates who have had teaching experience. It is desirable that candidates should have some knowledge of English and Foreign Literature and be able to speak and write both French and German. The successful applicant will be required to undertake the organization of the routine work of the library, and to give assistance to teachers and others who make use of it.

Applications should be made on the official form to be obtained from the Education Officer, London County Council, Education Offices, Victoria Embankment, W.C., to whom they must be returned not later than Monday, 12th January, 1914, accompanied by copies of three testimonials of recent date. All communications must be marked "Librarian," and a stamped addressed foolscap envelope must be enclosed.

Canvassing, either directly or indirectly, will be held to be a disqualification for employment.

LAURENCE GOMME,

Clerk of the London County Council,
Education Offices,
Victoria Embankment, W.C.
4th December, 1913.

C. H. K. MARTEN, M.A.,

Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and Full Index. 764 pp., super-crown 8vo, 6s. Complete in One Volume.

In Two Parts, 3s. 6s. each.—Part I, 55 B.C.—1603; Part II, 1603—1911.

For the convenience of those requiring the book for certain examinations it is also issued—

In Three Sections, 2s. 6d. each.—Section I, 55 B.C.—A.D. 1485; Section II, 1485—1714; Section III, 1714—1911.

BLACKIE'S LONGER FRENCH TEXTS

From Modern French Literature. Printed in large clear type, with Brief Notes, Exercises, Phrase-list, and Vocabulary. Fcap. 8vo, 3d. each.

Jules Verne—Voyage au Centre de la Terre. Edited by C. W. BELL, M.A., King's School, Canterbury. With Retranslation Exercises.

Nodier—Contes de la Veillée. Edited by C. G. HOLLAND, M.A., Chief Modern Language Master, Sevenoaks School. With Retranslation Exercises.

Féval—Le Petit Gars. Edited by S. TINDALL, M.A., Bradford Grammar School. With Retranslation Exercises.

Theuriet—L'Oncle Scipion et Sa Promesse. Edited by JAMES P. PARK, Hillhead High School, Glasgow. With Retranslation Exercises.

Mérimée—Lettres d'Espagne. Edited by J. LAFFITTE, B. & L., Principal French Master, City of London School. With Retranslation Exercises.

Complete List of the Series on application.

BLACKIE'S LITTLE FRENCH CLASSICS

Representing all important French authors from Montaigne to Bourget. Fcap. 8vo, 4d. each.

Madame de Pressensé—Brunette et Blondinette. Le Massacre des Coings. Edited by DOROTHEA C. BEDFORD, First Class Modern Language Triposes.

Aimard—Les Contrebandiers. Edited by EDITH FIELDING, Croydon Borough School for Girls.

Balzac—Le Réquisitionnaire and El Yerdugo. Edited by C. W. BELL, M.A., King's School, Canterbury. With Exercises.

Gérard—Le Tueur de Lions. Edited by CLÉMENTINE SAUNOIS, Officier d'Académie. With Retranslation Exercises.

Molière—Monsieur de Pourceaugnac. Edited by SYDNEY H. MOORE, Eltham College, Kent. With Exercises. 10d. In the supplementary series of Complete Plays.

De Vigny—Laurette. Edited by THOMAS KEEN, M.A., High School, Glasgow.

Madame Le Brun—Souvenirs. Edited by EDITH H. HERBERT.

Complete List of the Series on application.

BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. Over 100 Volumes. To be used in correlation with the study of English Literature and History.

THE WARWICK SHAKESPEARE.

Edited by Prof. HERFORD, Litt.D. The best and most widely used edition of Shakespeare for School purposes. Price 1s. and 1s. 6d.

A New Series drawn from Contemporary French Literature.

BLACKIE'S COPYRIGHT FRENCH TEXTS.

With Notes and Exercises written in French, and Vocabulary.

Edited by **CHARLES ROBERT DUMAS**, Professeur au Collège de Saint Germain-en-Laye, and **J. S. NORMAN, M.A.**, Head Master of New Beacon School, Sevenoaks.

10d. each.

François Coppée—Six Contes (ready).

Paul Arène—Contes de Paris et de Provence (ready).

M. Level and C. Robert-Dumas—Contes de l'Heure Présente (ready).

George Lenôtre—Légendes de Noël (in preparation).

LIST OF SCHOOLS AND TUTORS.

An Aid to Parents in the Selection of Schools.

1216 pages, crown 8vo. Red Cloth, 2s.; post free, 2s. 6d.

SEVENTEENTH EDITION NOW BEING PREPARED FOR PRESS.

THIS BOOK secures for its advertisers a far larger proportion
of definite results than any other publication of its kind.

PUBLICITY.

The Army and Navy Gazette.—"PATON'S LIST OF SCHOOLS is quite invaluable to parents. It is carefully written and revised, and the articles on the Navy and the Army and how to enter them are particularly recommended, for they are compiled with skill and expert knowledge."

The Daily Telegraph.—"PATON'S LIST OF SCHOOLS AND TUTORS is more than its name implies. Not only are there classified lists of the boys' and girls' schools of the United Kingdom, training, nursery, kindergarten colleges, &c., but particulars are given in a concise and practical form of many of the best of them, to assist parents in their choice. Arrangements are made so that the List may be consulted at our Consulates and Embassies, and in the best home and foreign hotels, while it is included in the libraries of a score of the principal steamship companies."

The Standard.—"A useful compilation that has fought its way to the front as an accurate fingerpost to parents in their choice of schools."

The Journal of Education.—"This annual, now in its sixteenth year of publication, as it grows in bulk, increases its usefulness. A parent in search of a school for boy or girl has only to turn to the map and index and he will find sufficient information about the schools, public and private, available in any large town or neighbourhood to enable him, not indeed to make his choice, but to select the few which will *prima facie* suit his requirements. To most schools a photograph of the buildings is attached, and photographs, unlike prospectuses, cannot lie."

The Yorkshire Post.—"Contains all the features which in the past have established it as a safe guide to schools."

The Scotsman.—"Parents who are deep in the question: Where shall we have our boys (or girls) educated? can have no better aid to its answer than is afforded by PATON'S LIST OF SCHOOLS AND TUTORS."

The Montreal Star.—"The Guide to the Schools of the United Kingdom, issued by Messrs. Paton, is so complete and so carefully compiled that anyone requiring information regarding British educational institutions cannot do better than have recourse to it."

RECOMMENDATION.

INDIA, 25.9.1913.
"We have to thank you very much for the trouble you have kindly taken on our behalf, and we feel that but for you we would not have been able to make a proper selection of school, and to get this at terms within our means, so that we can continue to keep the boys at the school on a permanent footing."

LONDON, 13.10.1913.
"I have sent my little boy to — School. He is very happy there, and well looked after, and I am very pleased with everything I saw there. Many thanks for the great assistance you were to me."

COLCHESTER, 13.9.1913.
"I am extremely obliged to you for the great help you were to us, and for sending us such a splendid selection of schools, and shall most highly recommend your Agency to any parents requiring schools, for with your help it is no trouble at all."

BRISTOL, 18.8.1913.
"My son returned home yesterday from the Tutor with whom I placed him on your recommendation. We are well pleased with his progress and the way he has been looked after. I now wish him to take a course of Chemistry and Physics, and should be glad to know of a good place. Friends have given me some names, but your experience will be of far greater value."

EDINBURGH, 5.9.1913.
"Two years ago you placed my daughter in — School. She has made splendid progress there. I now propose to send her abroad, and should be glad of your help, as I know that anything you recommend can be thoroughly relied upon."

HAMPSTEAD, 2.10.1913.
"We have to thank you very much for your courteous assistance in placing D —. It is just the school she required, and we feel we were fortunate to have had the benefit of your knowledge in the matter. Next year we shall be sending our younger daughter to school, and shall certainly seek your advice again."

MANCHESTER, 14.7.1913.
"I cannot thank you enough for your help in finding me a suitable school. I am exceedingly pleased with — School in every way."

HODDESDEN, 20.9.1913.
"I promised to let you know how my son fared with the Coach to whom you recommended me some time ago. He was delighted with everything, and he could not have been better placed from an intellectual point of view. The stay has been quite an education, and I am happy to testify that it has broadened him generally."

PUBLICITY plus RECOMMENDATION.

"You will be pleased to hear that we shall have two more girls through a pupil whose parents saw our advertisement in your book. We have already had four girls through the same source, though this pupil came to us only eighteen months ago."

pp. 59, 61, and 69.

His Excellency the Viceroy.

"I am directed to thank you for the copy of the 'List of Schools' which you have sent for His Excellency."

The Commander-in-Chief in India.

"His Excellency desires me to acknowledge receipt of the copy of this year's 'List of Schools.' He will have it circulated at Army Headquarters, and feels sure it will prove of interest and value to those who have children they wish to place in schools."

The Financial Commissioner, Punjab.

"I am much obliged to you for the copy of your 'List of Schools.' I have more than once had to refer to your work in connexion with my sons' education."

The Archbishop of Calcutta.

"I have received your beautiful 'List of Schools,' and have placed it in a conspicuous position in my library at the disposal of the parish priests of the town, who may have occasion to advise parents in the choice of a school for their children."

The Archbishop of Madras.

"I have much pleasure in acknowledging receipt of your beautiful edition of 'List of Schools,' for which His Grace thanks you."

The Archbishop of Simla.

"The Archbishop of Simla is much obliged for the 'List of Schools,' and he will be glad to refer to it in the case of parents asking advice re schools at home."

The Bishop of Lahore.

"I acknowledge with thanks the receipt of your book 'List of Schools.' I am convinced that it will be very useful, as often parents come to inquire to what schools they can send their children."

The Bishop of Tinnevely and Madura.

"I beg to thank you most cordially for the copy of your most useful 'List of Schools and Tutors.' It is a mine of valuable information, and I am very glad to have it."

The Archdeacon of Bombay.

"I am in receipt of your copy of this year's 'List of Schools,' which is very well got up, and appears full of useful information for parents."

The Senior Chaplain, Murree.

"Thanks for the copy of this year's 'List of Schools.' When asked about recommending English schools, I will consult your book."

The Senior Chaplain of Quetta, Baluchistan.

"Many thanks for your most useful book."

The Principal of Aitchison College, Lahore.

"I am much obliged by your sending me a copy of your 'List of Schools.' It is a most useful book, and has already been much in demand by my friends."

Puisne Judge, High Court, Allahabad.

"Sir E. G. Knox thanks Messrs. Paton for the copy sent of 'List of Schools.' He is often asked about schools, and will show the book to others."

The Vice-President, Legislative Council, Naini Tal, U.P.

"I am much obliged to you for sending me a copy of your 'List of Schools,' which will be of interest to my friends."

Member of Viceroy's Council, Simla.

"I am obliged for the 'List of Schools,' which will, as it happens, prove very useful to some friends of mine."

The Cooch Behar Club.

"I have to acknowledge, with thanks, the receipt of a copy of your 'List of Schools.' The book is sure to prove a valuable acquisition to our Club Library."

Upper Burma Club, Mandalay.

"I beg to acknowledge receipt of your 'List of Schools,' 1912-13, and to inform you that it has been placed in a conspicuous position in the Gentlemen's Reading Room."

Trichinopoly Club.

"The copy of 'List of Schools' to hand. It has been placed in the Reading Room of this Club amongst works of reference."

1st Border Regiment, Maymo, Burma.

"The copy of your 'List of Schools' will be placed where all Officers will have access to it at any time."

1st Sherwood Foresters, Trimulgherry.

"We beg to acknowledge the receipt of your 'List of Schools,' which we shall find most interesting and useful."

Mess President, 1st S. Lancs. Regiment, Subathu.

"Your 'List of Schools' received with thanks. The same will be placed in the ante-room for the convenience of Officers."

The Librarian, University of Bombay.

"I have to acknowledge with thanks receipt of the 'List of Schools' presented by you to the Bombay University Library."

The Chairman, University Library, Madras.

"I write to acknowledge with thanks receipt of a copy of your 'List of Schools,' and to inform you that it shall be placed in the Reading Room of this Library."

Hotel Majestic, Bombay.

"We have placed your List in a prominent position in our Reading Room for the use of visitors."

Grand Hotel, Calcutta.

"I have placed the copy of your List in an accessible position for the guests to see."

Central Hotel, Karachi.

"I shall place the book for the visitors in my Hotel where it will be accessible. I shall be obliged if you will send me another copy for my Poona Hotel, where, I can assure you, the best use will be made of it, and it will be put before all the visitors for perusal."

P. & O. Steam Navigation Co., Calcutta.

"The copy of your 'List of Schools' has duly arrived, and will be placed on the table in this General Office for the information of intending passengers."

Thos. Cook & Son, Bombay.

"We think this book will be of use to us in giving information to any of our clients who wish to send their children to Europe for education."

Messrs. Kemp & Co., Bombay.

"The book is extremely well got up, and we shall place it in a position readily accessible to our customers."

The Standard Life Assurance Co., Calcutta.

"Thank you for the copy of the 1912 edition of your 'List of Schools,' which has been placed in an accessible position in this office for reference by our daily visitors."

Allahabad Bank, Limited.

"We will place the book in a prominent place where it will be accessible for the use of our customers."

Alliance Bank of Simla, Limited.

"The book containing this year's 'List of Schools' has come safely to hand, and I am glad to have it. I am obliged to you for sending it."

LONDON: EDWARD ARNOLD, 41 & 43 MADDOX ST., W.

"STYLISTICS."

FROM time immemorial the subject of language has occupied men's minds; the rhetoricians and stylists of ancient Greece and Rome, the scholars of the Renaissance and the philologists and phoneticians of our own day, have all contributed their quota to the sum of our knowledge of this fascinating study. There is little that we do not know with regard to language, and it might almost seem that there were no fresh fields open to the explorer. But to a Swiss professor belongs the honour of having indicated new aspects of the study of human speech and opened out fresh vistas to our ken. At the University of Geneva, where he holds the chair of Comparative Philology, in his public lectures at the Sorbonne, and in his various publications, Prof. Charles Bally has enunciated the principles of a new science of linguistics, to which he has given the name of "la stylistique." It is not possible within the limits of a short article to give a detailed explanation of this science in its entirety; a brief description of its aims and methods is all that can be offered. The most striking thing about it is that Prof. Bally takes as his starting-point the everyday language of the ordinary person. Up to now the study of linguistics has been almost entirely confined to the external facts of language, those which lie, so to speak, on the surface, grammar, history, phonetics—and here, indeed, nearly everything has been done. The new problems are of a psychological and social nature; the study of form is now to give way to something quite different. "A language (to quote Prof. Bally) is no longer regarded as a more or less complicated machine, of which the workings are to be studied, and which can be set in motion by automatic means: we are beginning to realize that it is a sum total—or, better said, a system of means of expression." Stylistics (the word is simply "lifted" from the French) has nothing to do with style or the art of writing; it does not profess to teach composition, or even accident and syntax: these things, useful though they may be, do not come within its province. It is the science which observes the thousand and one forms by which human emotion and sentiment are translated into articulate speech; it is, in fact, the science of spontaneous expression. Its object is to collect and compare the facts of language bearing this emotional or *affective* mark, to discover by what processes speech succeeds in expressing human feelings, and, finally, to present these facts as concisely as possible.

The time occupied in teaching English in our schools by no means produces results proportionate to the energy expended in imparting "grammar and composition"; every teacher has his own sad story to tell of the scrappy, indefinite, and vague vocabulary of the boys and girls under his care. And when the schoolboy grows up he still shows the same deplorable ignorance of his mother tongue, and this in spite of the enormous amount of "reading" that he does. Schoolboy compositions and the familiar letters of domestic servants and grocers are part of the stock-in-trade of the comic journalist. Yet we are supposed to study the art of writing at school, and if we learn classical or living languages we get a fair idea of the principles of grammar in general. The fault therefore must lie in the preliminary training. "Children," says Mr. Gow in the preface to his "Method of English," "blunder sadly from mere ignorance of the functions of words in their own language. . . . In truth, the higher work of schools is perpetually hampered by the neglect of English in the lower classes. It is often said, and it is sometimes true, that, sooner or later, pupils learn English grammar through Latin, but many of them learn neither, and the process is in any case unreasonable." What is here said of grammar may be applied to "composition" as well: if the word "composition" had not become a technical term, meaning the "art of producing some musical or literary piece," but had kept its etymological signification of "putting together," things might have been different. In our "composition" lessons we set up—consciously or unconsciously—an ideal of "style" which the unfortunate pupil has ever to keep before him, and by so doing we are confusing two things which are quite different

and apart from each other, namely, the standard language and the individual style of an author. The former is within the reach of all, the latter is given to but few. The history of any literature offers abundant proof of the truth of this assertion. Pope, for instance, as we know, built up a style of his own on a careful study of Dryden and Boileau, and made it personal by means of his wonderful art. The perfection of his "lucid snip-snap" seemed to the other versifiers of his day to be an easy thing to imitate; hence the literary market of that time was flooded with "copies of verses," all bearing the same hall-mark—they might all have been written by one and the same person. It is only when we turn back to the pages of the master that we perceive the difference. It is absurd to imagine that all the pupils of a given class should be of a literary turn of mind. "In a class of twenty pupils," says Prof. Bally, "we shall find after careful search perhaps one with the literary temperament, scarcely more. And the others? It may be that the others, too, are original spirits, but why should we imagine that their originality must take a literary form?" Yet this is what is being done daily in our schools, and the result is those monstrous "essays" and "compositions" which are the despair of every schoolmaster. The object of English teaching should not be to try to make our pupils emulate Shakespeare or Walter Pater, but to *talk English like everybody else*. The primary function of language is not to write books, but to express life: we are not to attempt to impart "style," but to show how the thoughts that arise in one's heart and head can be expressed in a simple and natural manner. "The spoken word is in our days a weapon in the struggle for life, and woe to him that cannot handle it!" For those whose task it is to teach English the practical questions take these forms: How are we going to give our pupils an adequate vocabulary, sufficient for the needs of daily life? How are we going to teach them to express themselves in a natural manner? How are we going to enlarge the horizon of their thought?

The answer to these queries is supplied by Prof. Bally in his "*Traité de Stylistique*" and other works from his pen.*

We must take as our point of departure that which is known, namely, the tongue actually spoken by the pupils, and not begin with the language borrowed from the circulating library or even from the classics; we must commence with such simple notions as are within the grasp of all. "Form as exact an idea as possible of the fundamental ideas expressed by the abstract vocabulary and group around those ideas the means of expression which the vocabulary places at our disposal." (The word *idea* is not to be taken in its philosophical meaning; it implies in most cases nothing more than those simple concepts which are familiar to the majority of people.) "Death, life, motion, rest, pleasure, pain, wealth, poverty, justice, injustice—these are ideas which we grasp without effort; we may not be aware of the realities which they conceal, but we adopt them without discussion, because they are part of our life, and are of the very warp and woof of our thought; true, we grasp them by instinct rather than by reason, in the value we attribute to them more than in their essence. Now, in a given state of the language the person who is speaking has in his subliminal consciousness the feeling that every fundamental idea can be expressed in different terms according as it is conceived in the mind under a logical or an emotional aspect; hence each idea has a more or less extensive vocabulary and grammatical means of expression at its disposal. All the elements of this vocabulary are more or less intimately related to each other, but they are fixed by associations of ideas which have become traditional: the vocabulary forms, therefore, a relatively coherent whole, a sort of 'molecule' the 'atoms' of which are arranged in a settled manner. An 'expressive molecule' is consequently the whole, or rather, the system, of the facts of expression grouped around a fundamental idea. The preliminary training mentioned above, i.e. for composition, consists in the methodical study of these 'expressive molecules.'"

* "*Précis de Stylistique*"; "*Traité de stylistique française*"; "*Le langage et la vie*." (The writer of this article hopes shortly to publish an English rendering of the last-mentioned work.)

If we take such simple ideas as those indicated above and try to obtain from our pupils as clear a notion as possible of their meaning, we shall probably be surprised at the ignorance and vague thinking displayed. Ask them to explain the fundamental idea at the base of a proverb, such as, "All that glitters is not gold," and you will probably get answers of this kind: "Every bright object is not an object of value," or, "Things are not always what they seem"; but few will get down to the notion of "deceptive appearance." This determination of the simple idea, called by Prof. Bally "identification," is but one of the preliminary exercises to composition, there are others equally valuable and instructive. For instance, the pupil may be asked to replace a phrase by a single word (on the spot = here), or to find "contraries" (acquit = condemn); he may be told to find the common term in a group of so-called synonyms, that is, the term containing the idea at the root of the group (practical, feasible, &c. = possible), or, given the common term, find the other members of the group. A further exercise is to identify the different meanings of the same word in different contexts (on this condition, in good condition, &c.). Figurative expressions may be replaced by abstract ones and brought back to the simplest terms (to roll in wealth = be rich; head over ears = quite). Abstract terms may be classified; thus a group of terms may be brought under one head (straight, curved, round, square under *shape*). One of the most interesting of the exercises is to take some simple story or even real event and have it related by different persons, e.g. the same tale as told by a policeman, a child, a clergyman, a navvy, &c. There is a huge variety of interesting and instructive exercises which may be gone through without taking any other point of departure than the common tongue, the language of every day. This has hitherto been neglected as being "vulgar" and undignified—as if the speech of a whole nation could ever be that! The words we use to express our innermost thoughts and feelings, the terms which are part and parcel of our daily life—these can hardly be contemptuously dismissed as being of no value. Peter Mark Roget puts the truth pithily in the preface to his "*Thesaurus of English Words and Phrases*": "A misapplied or misapprehended term is sufficient to give rise to fierce and interminable disputes; a misnomer has turned the tide of popular opinion; a verbal sophism has decided a party question; an artful watchword, thrown among combustible materials, has kindled the flames of deadly warfare, and changed the destiny of an empire." Strange that an instrument of such power should ever be treated as "vulgar"!

It may be argued that people speak differently according to their environment or social rank, that an educated person talks in another manner than an agricultural labourer. True; but, while we are willing to grant that the latter may learn a good deal from the former, we are not so ready to admit that the philosopher may learn anything in the way of language from the ploughman. Nothing that touches the real tongue of the people is too mean for study.

The exercises mentioned above are not all new; stylists, one imagines, have carried them out consciously or unconsciously, with or without system; what is emphatically wanted now is a manual or manuals for schools. Such a book or books containing exercises of the kind indicated would be more likely to supply the "long-felt want" which every schoolmaster professes to provide in his newly published Latin or French grammar.

We must, as a matter of fact, change our point of view with regard to the spoken language. Many of us have been taught to believe, and actually do believe, that language is an instrument of thought, and, as such, the servant of the brain. But, as a matter of fact, natural language is the expression of life, and what is life but action? The sources of action lie in our needs and aspirations, whether elevated or base, and everything that touches on action is conceived by means of feeling and emotion. We do not operate with pure ideas; everything that we say is coloured by our feelings, is *subjective*. If you take the most ordinary phrase in the world, as "It is raining," this "judgment" is not a mere statement of fact, except in rare cases (e.g. in reply to a question), it is the

expression of a feeling which may be one either of pleasure or of pain, according to circumstances. And so of every utterance of the human tongue. Hence syntax and the so-called "logic of grammar" do not teach us everything; the importance of formal grammar is in any case over-rated. The ideas expressed by grammar are, of course, of value, but the mere statement of them does not make them any more real. As mental discipline syntax may have its uses, but it is absurd to think that every person who speaks "correctly" has the rules of grammar like a signpost at the back of his brain. At its best syntax may give us some notion of the logic of language, at its worst it may serve as a rule-of-thumb test of the "correctness" of a sentence. Logic does not explain all the facts. "The grammar we learnt at school taught us to look for intellectual distinctions everywhere, and we have continued to apply this unhappy principle to the interpretation of the facts of expression. No one pretends to deny that such intellectual distinctions actually exist, but it cannot be admitted that they exist in an isolated state, and that they alone form the majority of facts that are capable of analysis. On the contrary, most of the distinctions that our instinct causes us to find spontaneously in our native language are based upon the subconscious impressions of which the facts of language are the vehicles and symbols, and—this is the important point—these expressions lead back to a certain number of fundamental types."

Such is a brief account of the new science of Stylistics. The absence of manuals is unfortunate, though an alert master can do a great deal with any simple text. Tentative and timid efforts have indeed been made in many of our books on "Composition," but the fatal ideal of "style" has always proved an impediment. Let us dismiss the idea that we are to make *writers* of our pupils, and concentrate our efforts on turning out *speakers*—that is to say, not orators, but people with a good knowledge of their mother tongue and its resources as an organic whole, capable of expressing themselves clearly and naturally on all that concerns their daily life. We shall thus produce men and women possessing a profound respect for the mighty instrument of speech as used daily and hourly by millions of human beings all over the world. We shall by no means neglect the "irreducible minimum" of grammar and logic, but we shall cease to consider the label as being of more importance than the flower itself.

F. H. G.

FAMILY GHOSTS.

A RAINY afternoon, solitude, and a bundle of old letters. The firelight flickers, and in its flickerings the tawdry modern furniture and ornaments grow dim, yielding to the stately precedence of the old; the poor accretions and mere pitiful veneer of a new and frivolous generation fade into insignificance before the conquering associations of a stern old-fashioned past. Friendly ghosts move the pale upholstered chairs and shining tables back to their accustomed places, evoke, suppress, transform, until the room has reassumed the prim simplicity that impressed me as a child. Family portraits, Oliver Cromwell refusing the Crown, scenes from the life of Christ, Burgomaster Hieronymus Holtzschuer, Highland Glens, Sheep grazing on the ruins of Ticonderoga, look down upon me from the walls—kindly, I think. If I will I may leave my armchair by the fire, and, treading noiselessly on the soft fur mats, smell the fragrant rose-leaves in that large china bowl or set the crystal pendants on the chimney-piece a-swinging, admire a marble Hebe beneath her oval canopy of glass, or gaze upon the woolliness of men and trees in samplers and the faded silken profile of a maiden queen. If I cross to the bookshelf I know I shall find, on the left, by the red window curtain, treatises on astronomical observation and the art of dialling, Goldsmith's "Animated Nature," and five volumes of John Wesley's "Compendium of Natural Philosophy." Just below, very worn by constant use, are D'Aubigny's "Protestant Reformation,"

Calvin's "Institutes," Charnock's "Sinfulness and Cure of Thoughts," the complete works of John Bunyan, Howe's "Re-deemer's Tears wept over Lost Souls": while a higher shelf contains books suggestive of lighter reading and a feminine touch: "Songs of Home and Happiness," Cook's "Letter Writer," the poems and prose remains of Henry Kirke White, a manuscript of cooking recipes and another of homely cures. All these were favourite books long pondered over and often read. If I choose, I may reverently turn their well-worn pages and enjoy many a quaint illustration and marginal note. Then I may sit by the fireside and hear once more in the waning light a Mozart or Beethoven sonata played with clean unemotional touch, or memory may evoke in lighter vein the Invitation to the Waltz, Scarlatti, even Liszt, but never the passion of Chopin or the madness of Schumann! One might as well expect to find Swinburne and Rossetti on the bookshelves. None of these have ever entered here. The spot remains a curiously isolated oasis of eighteenth-century culture; all other movements and influences have failed to reach it or have passed it by.

The substantial red-brick house stands as a mute protest against the mushroom growth of showy villas and sordid terrace property that has sprung up around, and its well-laid garden plot with lawn and sundial, drooping ash, espaliers, and box-edged paths, is a silent condemnation of the alternate ostentation and slovenliness of other gardens that adjoin. All here has ever been orderly, decorous, and suppressed. Nay, I speak unjustly—otherwise expressed. For the place is no mere husk or shell; it is like some well-cut plain old garment that still to sympathetic eyes recalls the wearer's form. But I will not look at books nor listen to the music now. I have been reading old letters, and it seems best to sit still awhile in the firelight, seeing dream faces and hearing dream voices out of a vanished life.

The strong man of the family was plainly David Thirkell. He had an invalid daughter and a scapegrace son. The daughter, on painted glass in the room where I am sitting, walks among red roses in a thin *décolleté* muslin dress. She writes no letter without expressing her conviction that her phthisical sufferings are the dispensation of a merciful Providence, but still is human enough to consider a good deal of querulousness consistent with piety. The scapegrace son has left some amusing sketches, among them one of a fair maiden leaving church on Sunday, gowned in ample silks and wearing a large straw bonnet that rests on a semicircle of stiff little curls and has handsome strings tied in a broad bow beneath her chin. She is pursued by a gallant youth carrying an elegant cane, in box hat, coat with wide revers, and high folded cravat. Under the sketch is scribbled, "Miss T. and Mr. S. A Religious Courtship." Family tradition describes the artist as most consistently drunk, perennially charming, a wit, and a plaguy wag. However, now and again hard work or epistolary effort appears to have had a chastening effect upon him. This is how he writes to his "dear Sister" visiting at Newcastle in 1820:

With pleasure we received yours of the 11th inst. I was just going to write to you again, though you may easily conceive that opportunities are very scarce with me, being engaged from Six in the Morning till near Nine in the Evening. We are glad to hear that your gratifications are still enlarged by a change of scene, with the addition of an agreeable view of the watery world. I hope you will not let any opportunity slip, without embracing every advantage that may present itself, and that your mind may be filled with gratitude for the kindness of your friends and the many indulgences you are favoured with.

But sentiments so eminently becoming and appropriate do not last long. In the very next paragraph he falls from grace:

We feel much pleasure to hear that your aunt and cousins are all well, but I felt disappointed in observing nothing said about my Cousin Thomas.

A perfectly innocent remark, if we did not happen to know that Miss Mary Thirkell was deeply in love with Cousin Thomas, verses being extant that prove it beyond a doubt. Not content with this sly thrust, the rogue writes at the very bottom of his first page of broad gilt-edged paper:

You request us to send all the news we can. I will endeavour to pick

out a few fragments, but as yet I know not what. Your very particular friend Miss Ford is no more.

After this nicely calculated pang, with what anxiety do we, as erst Miss Thirkell, turn the page and read :

On Friday week she dropp'd before the altar and rose again in the character of Mrs. Dibb. My mother and I met them in procession to the church on the Sunday following. She called two days before her nuptials to enquire after you, and expressed a hope of receiving a very long letter from you very soon.

After all, a kindly wag ! Then he gives his sister a whole budget of matrimonial news, and follows it up with a graphic account of the adventures of a lunatic friend,

who, though recovering, is not yet come home from the Refuge. He made a desperate leap through a lofty window. Dr. Anderson and the Keeper chanced to be on the Ground, which rather broke his fall (!), so that he escaped unhurt. His reason return'd almost immediately, and has continued ever since. The doctors now call it a Brain Fever.

With a disorderly paragraph containing two bankruptcies, cold and rainy weather, and the death of Bradley, the Yorkshire giant, who measured nine feet in his coffin, the letter concludes, after the conventional greetings to the inevitable string of relatives, of course. It is "franked" at 9d., and was delivered at Newcastle on July 17, 1820.

David Thirkell, the father, must have been a delightful person, but beyond a few kindly letters to his daughter, in one of which he tells her to buy "a new bonnet, spencer, frock, as they are worn, and anything you want ; I will send the money," and ends with the pious wish that she "may enjoy every needful Blessing both for Time and Eternity," very little of his personal correspondence survives. His personality is rather everywhere assumed than especially indicated ; his presence is elusive but all-pervading. A vast amount of documentary evidence attests his money-making and lawsuits, and some result of his energetic grasp of affairs domestic and commercial remains in this pleasant brick house with its old-time garden. Personally, I have come to look upon him as a sort of compendium of the gentlemanly virtues of his time, and to find in him something peculiarly English, almost Shakespearean. It is through a worn leather-bound pocket-book that he thus captivates my imagination. It is impossible, without reprinting the whole, to do literary justice to this small book, but a few quotations from it may give some idea of its quaintness and charm—I had almost said of its virtue.

It opens with a list of "Peeresses in their own right, either by Creation or Descent." Then come the holidays to be kept during 1775 at the Exchequer, Stamp Office, Excise Office, Custom House, East India House, and South Sea House. Next, an ingenious code, which "saves the trader's memory from a load that would encumber it, or prevents his turning frequently to his bills of parcels where his memory is deficient." Two pages are then devoted to the rates of London watermen, hackney-coach men, and hackney-chair men. The latter, we learn, "are obliged to go one mile for a shilling, and one mile and a half for eighteen-pence," and "a shilling coach fare is an eighteen-pence chair fare." After "Tables of Interest and a new Marketing Table by the pound, yard, stone, &c.," there is a series of short essays which are delightful reading.

They are wide of the mark who make the education of youth so laborious and abstruse, whereas little more is to be done than to inculcate true notions of things, not as characterised in this or that language or defined in any particular treatise, but as they are in nature, and as youth is likely to experience them in the course of life. Yet this knowledge is not to be wrought into them by chiding and harsh usage ; on the contrary, they ought to be treated tenderly, by descending to their capacities, and leading them gently step by step, and a proper indulgence render a proper restraint the more easy. — On Education.

Those marriages generally abound most with love and constancy that are preceded by a long courtship. The passion should strike root and gather strength before marriage be grafted on it, for a long course of hopes and expectations fixes the idea of our minds, and habituates us to a fondness of the person beloved. . . . An agreeable person not only occasions, but continues love, and promotes a secret pleasure and complacency in the beholder, when the heats of desire are extinguished. It puts the wife and husband in countenance, both among friends and

strangers, and generally fills the family with a beautiful and healthy race of children. . . . No one thing is a greater mark of a degenerate age than the common ridicule which passes on this state of life. A happy marriage has in it all the pleasures of friendship, all the enjoyments of sense and reason, and, indeed, all the sweets of this life.—On Love and Marriage.

As curiosity is a passion peculiar to rational beings, it has a power over both sexes, and is prevalent in all degrees of mankind. We may view it in the servant, as well as in the lady of quality ; in the tradesman and the philosopher. It is observed as one of the first passions we discover after our coming into life, and one of the last we retain in departing from it.

And then, alas !—

Curiosity is nowhere more prevalent than in the female sex, and their desires generally turn on things which, if known, would give them the greatest uneasiness. The impertinent part of curiosity is ever hurrying some of the fair sex to fortune tellers, astrologers and cunning men and women, which occasions more uneasiness in private families than any foible whatsoever.—On Curiosity.

Ceremony is described as—

Nothing else than the art of disguising our own faults in compliment to those of others. Good manners is founded on this single rule, "To bear with the frailties of others, and take care that our own shall not offend ;" if we should add a grace in doing trifles, and ease in affairs of moment, we exhibit an accomplished person, and ceremony can add no more.

The last fourteen pages of the work are devoted to music, singing, and dancing. The tunes are attractive and so are their names : "The Shepherd's Delight," "Sweet Kisses," "Willy of the Green," "The Complaining Maid." Some are songs sung at Vauxhall and Marylebone by famous singers of the day—e.g. Mrs. Hudson, Mrs. Vernon, Mr. Dubellamy. Did David, we wonder, hear Mrs. Hudson sing her famous *rondau*, "Why should we of humble state ?" when he made the journey to London in 1782, the expenses of which are entered on a blank page of his pocket-book ? Was the lady mentioned in one of his letters from Hull his frequent partner in "London Tavern," "The Alderman's Hat," and the other fashionable country dances of the time.

Your Mother [he writes] was at the Ranters' Meetings. They held a Camp Meeting the whole of Sunday on the west side of New Dock, which was attended by thousands of people, but I did not see them, for I trust that my mind is fixed on a more Sure Foundation.

Or did he "Allemand, then foot it sides and turn" with some other maid ?

The whole is well worth thinking over. The old letters lift the veil from the past and many forms may be discerned. Besides David Thirkell and those that he begat, there are country folk who write disjointedly and at long intervals of money losses, cattle, woodmanship, and the vicissitudes of county families. Calamity alone seems to make them really articulate, for their longest letters narrate in lugubrious detail the deaths of those they loved. There is also a voluble divine consumed with missionary zeal, and impressive even now in his conviction of the impending final dissolution. There are ladies, too (his spiritual co-heirs, no doubt) who write to each other, and pay 9d. for the letters, apparently with the sole and undivided purpose of reminding each other of the coming Day of Doom. They seal with adhesive texts or the impression of a mortuary urn. Others, again, are at pains to compose or to transcribe verses like the following :

Who makes me of his joy partake,
But, if aught chance his peace to break,
Tries to conceal it for my sake ?
My Husband.

Or these :

Marriage was formed in Heaven ! 'tis Heaven on earth
When it is founded on esteem and worth.
Oh ! what were man if woman ne'er had smiled ?
A lonely wretch, his Eden but a wild.

And so on for some seventy lines. Most of these ladies have left careful inventories of household store, and the "ranting" dame never destroyed the accounts for her daughter's schooling. One or two travel abroad and write urgent letters to seaport friends to recommend maids, and find out the times

of sailing vessels. All these and many more have written the old letters I have been reading. Would they, I wonder, have greeted me with the right hand of fellowship? Possibly not all of them. But every one, I believe, won a measure of favour or charity from the owner of the worn old pocket-book.

M. H.

NOTES ON GIRLS' SECONDARY EDUCATION IN CANADA.

THERE are only two types of institution, broadly speaking, at which girls can receive secondary education in Canada, the "high" school and the "private" school. Neither term has its English use or limitation. The "high" school is a secondary school supported wholly or chiefly by public funds and managed by popularly elected trustees; the "private" school is any other school, whether proprietary, charitable, managed by a religious community or by trustees of a particular denomination or privately owned by its principals.

The high school is called a "collegiate institute" in Ontario and several of the other provinces, when it is large enough to obtain a staff and equipment of stated size. This high-sounding title is seemingly much appreciated by those connected with the institution, but it does not imply any advance in status. It is, as they say, a real "secondary" school—that is, it only takes pupils who have finished their primary education and prepares them to enter a University or normal school, should they so wish. The course is for three or four years and the entrance age varies from twelve to fifteen.

These schools have the following advantages. They are generally free, and their equipment is good, frequently magnificent; buildings, ventilation, furniture are as imposing as the town or city can afford, and can easily be renewed every few years, when the school site rises in value and the whole affair may be moved and lavishly rebuilt without extravagant calls upon the taxes. They are also fairly accessible, as the law provides for their opening, even if they begin in a few rooms of the primary school, as soon as there is a reasonable demand for them. In them the student is sure of obtaining a standard preparation for various examinations, notably for University entrance or normal certificates. In the West there is an increasing tendency to diversity of courses; commercial and household training are often open to girls.

These great advantages would be still more appreciated if some boarding houses for girls were connected with the schools. As it is, the fact that courses and textbooks are uniform throughout the province ensures that the pupil who is obliged to move from one school to another in the same province finds her work little hindered. But the parents of a girl living remote from town or city must choose between boarding her somewhere in a town and paying "non-resident" school fees as well, or sending her to a private boarding school.

Some parents also object to co-education, and many wish their daughters to receive religious instruction, especially Bible teaching, at school. From an outsider's point of view, the high school has certain other disadvantages—some recognized by the teachers themselves. In the interests of education it is tragic that the girl's work should change so abruptly from primary to secondary. Four or five new subjects are begun together—algebra, sometimes geometry, one or two sciences, two foreign languages. The last is a desperate matter. A quite common result of beginning French and Latin together at this stage is for the astute pupil to disregard the pronunciation of both equally. For instance, a girl entering for matriculation can achieve a pass without oral French, so she economizes energy by pronouncing all her French as—Canadian English!

Again, old subjects are kept which might well be completed in the primary course. English grammar of an elementary type is still studied, so are writing, spelling, and arithmetic. In composition lessons the progress is often not very definite. One hears students in the high school still telling easy stories

in oral work as they do in Grade 2 or 3 (answering to Standards I and II in England) of the primary school.

The result is a time-table crowded beyond the imagination even of an English secondary teacher. All lessons are cut down to half-hour periods or sometimes less. Certainly they save time by having no assembly, and scanty prayers; in some provinces physical education is neglected, in some art, in most music. On the other hand, some add to the crowd of subjects compulsory household science for girls and manual training for boys. Half, or all, Friday afternoon is often devoted to a "literary society" meeting—that is, a small concert by the staff and pupils, extremely varied, but most unliterary as a rule. Obviously, much of the work will be superficial on both sides.

The "tone" of the "collegiate institute" is curious to an English observer. There is very little corporate spirit aroused in so short a period, and what does develop is not very satisfactory. The students are treated as if already at college; Tom and Mary Jones become "Jones" and "Miss Jones," and quite exempt from discipline of any English type. A lack of "rules" is excellent in its way, but, if it leads to each teacher making his or her own rules and punishments and standards of behaviour, it does not satisfy. The average teacher controls merely by popularity; they say it is wise to "make companions of the students." This means that the student, who has probably no special impulse towards such companionship, is apt to become the superior partner. The students' attitude towards the staff is peculiar, but supremely frank. A curious illustration of this occurred last year, at the prize-giving entertainment given at the collegiate institute in one of the largest cities of Saskatchewan. The staff took no part whatever in preparing the performance, yet for two days or more the students were practically free from ordinary work, in favour of rehearsals.

The first part of the program was chiefly musical—various solos, part-songs, and choruses of no interest were ineffectively performed. The most entertaining item was a burlesque drill by boys dressed as music-hall tramps of different types, but all assuming intoxication. The second part of the performance was a little play, "A Case of Suspension." Three girls in a "seminary" invite three undergraduates from a college near by to a secret feast. A professor discovers the provisions, and, in order to identify the culprits, gets into the basket in which they intend to raise the boys to their window. They make terms with him, however, while he is hanging between earth and sky, and he has to join the revels. The lady principal arrives while these are proceeding and is induced to follow the professor's example. The seminary servants join in, and all is merriment.

The performance was enlivened by witticisms aimed at the teachers, and especially at the principal of the collegiate. These were uproariously applauded. The moral evidently was that the young people knew what was best for themselves, and even for the faculty on occasion.

This performance was the chief annual function of the school, widely advertised and reported, and open to all who would buy half-dollar tickets. On discussing it later with a seventeen-year-old student of another collegiate institute, we tried to arrive at her attitude towards her own teachers. "I cannot imagine one of them telling me to do something I didn't want to do," was her remark.

One result of this lack of distance, rather than lack of respect, between student and teacher is a gain in sincerity. A Head Mistress of much experience said to me of her pupils, "If they are naughty, they are always found out." There is little motive for concealment. So, if respect is shown, it is felt, and the student is not tempted to hypocrisy. One must also make full allowance for great differences between Canadian and English children. The former live in a country where intercourse is simplified by the lack of conventional, one-sided deference; "sales lady" and shopper, pupil and teacher, child and parent, meet on a level, on simple, business-like terms, almost always courteous on both sides, and even cordial, if both desire it.

Again, the girl of thirteen to seventeen is no child in Canada. She has lived with grown-up people from infancy;

nurseries are almost unknown. She has assumed responsibilities on her own account, and often on that of others, at an early age. Many a high-school student has earned money, at teaching or other work, with which to support herself during the course. It is common for the girl students in Saskatchewan, for instance, to take a "third-class teacher's diploma" after one or two years' work at the collegiate, and to teach in a rural school for a year or so before proceeding with their own work. Some of these "prairie schools" are open only for two or three months in the summer, and the students can then teach in them at about £10 a month during the long summer holidays. Such girls have all the assurance and independence of a woman of forty.

Among the advantages of the private schools the chief are that all of any size take boarders, and almost all give more or less definite religious instruction. Many of them are extremely like English boarding schools, as is only natural when one considers that the staffs are generally English; the Canadian mistress does not adapt herself readily to "resident" work. There are a few, however, that resemble American rather than English institutions; a large new "college" at Calgary, for instance, with a Methodist connexion, is absolutely co-educational.

Even the most English of them differ from "Old Country" schools in the prominence they give to social training. The girls, and even mistresses, generally have weekly "at home" days, on which they receive relations in their best attire. Parents haunt the schools, and take genuine, even technical, interest in their children's productions. This difference is due to the difference in the girls' position. Other local influences affect public and private schools in much the same way; in a city where for various reasons the girls at the public schools work hard and intelligently, the same reasons will make the pupils of the private schools satisfactory; if the private-school mistress complains that her girls only want "a good time," the neighbouring "collegiate" will generally echo her. It is a matter of locality, and personal influence in neither case seems able to counteract it efficiently.

Other advantages of the private schools are the continuous education given (though at least one large high school in the province of Quebec shares this distinction) and the individual care of the pupils. The latter is hardly possible in the high schools. I asked the geometry master in a large collegiate in Ontario whether the students gave him in much written work. He said they never did any, as it would be impossible to correct it. One or two worked out exercises on the blackboard in class. Individual attention is a great feature of the moral and intellectual training in the private schools. One of the largest offers private coaching in any subject at so much an hour; any girl may ask for help, not necessarily in her weak subjects, and have a mistress's sole attention as often as she likes.

The moral training is difficult to gauge, but the personal influence of the teachers has far greater force than in any high school and is almost extravagantly valued by the parents. Discipline, even in the convents, is usually less severe than in English schools, but arrangements prevail by which the mistress and pupil see a great deal of each other.

Æsthetic training has almost its only chance in the private schools. Drawing, which is excellently taught in the primary schools of the western provinces, is generally crowded out of the high school curriculum, or is taken only in the first year, and no studio provided. In some of the private schools it is wonderfully taught, generally on the Ablett system. Unfortunately the convents still give much time to copying the most appalling designs and studies, but they teach beautiful embroidery. Music has a poor chance in the high school; it is a subject to which the Canadian child should give much time, for its ear is dull and its voice harsh. Only in private schools at present can one hear singing worthy of the name, and the allied arts of dancing and recitation generally receive some attention.

There is no doubt that many more "private" schools are and will be needed in Canada, but the day has gone by when "any woman could put up a sign and start a school." The

inaugural expenses are far greater than they were. The school must be central, or at any rate on a car route, in a country where the children cannot face the weather for longer than five minutes during six or eight severe weeks every winter. Land in such positions is at fabulous prices, whereas it was absurdly cheap ten years ago. The magnificent buildings and equipment of the high schools and the general swift advance of the standard of comfort make it almost necessary for a new school to impress the public by a specially built, well warmed and lighted, and expensively equipped house from the first. Private capital is now hardly equal to the strain, and here and there small companies are being formed to provide schools for both boys and girls, generally with a religious bias. A company of this type formed definitely with the object of establishing Church of England boarding schools in cities where none exist might at the present moment do more for the future of that Church than any other missionary enterprise. There are few cities where a convent school cannot be found, and most of them have a large proportion of Anglican scholars whose parents have no choice except between the convent and the high school. Such schools should also try to keep in touch with the University of their province or city. Education of girls is much hampered in the eastern provinces by unnecessary distances between the "English" private school and the Canadian University to which it should lead.

BLACK'S NEW READERS

Ed. by **JOHN FINNEMORE** (Author of "Social Life in England").
Each volume with 8 plates in colour and many in black and white.

LITERARY READERS.

Book I. Including Introduction to		
Little Folk of Many Lands.	Price	10d.
" II. Introducing the British Empire:	"	1s. 0d.
" III. How won, how kept, how used.	"	1s. 4d.
" IV. Dealing with North America.	"	1s. 6d.
" V. Dealing with Australia, New		
Zealand, and South Africa.	"	1s. 8d.
" VI. Dealing with the Indian Empire.	"	1s. 9d.

The special feature of this set of Readers is that in all Books above the Second an attempt is made to show how Britain came by her world-wide Empire. In the Third Book the special lessons deal simply with general considerations. In the remaining Books the great colonies are taken in turn, and a series of lessons is given on their history and how we came by them. Three-fourths of the prose, however, consists of lessons of general interest.

Edited by **E. E. SPEIGHT.**
Each volume with 8 full-page plates in colour.

SENTINEL READERS.

Book I	...	Price	10d.
" II	...	"	1s. 0d.
" III	...	"	1s. 4d.
" IV	...	"	1s. 8d.
" V	...	"	1s. 6d.
" VI	...	"	1s. 9d.

Sentinel Hours (an anthology of Prose and Verse) 2s. 0d.

This set of reading books has been prepared with a view to awakening intelligence and imparting knowledge, and of widening the sympathies of boys and girls in all humane directions.

The lessons embodied in these Readers are such as indicate themselves. Didactic talk has been as much as possible avoided, for all good teachers are agreed with the poet that

The argument most fit and ample
For present use is the example.

Edited by **W. J. GLOYER.**

GERMANY THROUGH LONDON BOYS' SPECTACLES.

LAST year twenty boys from the King's College School, Wimbledon, went for a tour in Germany, under the guidance of Herr Koch, the Senior German Master. I have been privileged to see some of the descriptive essays written by these young pilgrims, and entertaining reading they are.

Seeing the Kaiser was a memorable incident in the tour. Accompanied by the Kaiserin and Princess Victoria Louise, he chanced to visit Saalburg while the boys were there. The schoolboy salute was graciously acknowledged. One of the party, with an eye for comedy, recalls an amusing collision between enthusiasm and Teutonic officialdom. "— pushed himself to the front of the crowd and called for three cheers for the Kaiser. He was immediately, to his indignation and our amusement, thrust into a large puddle by a gigantic policeman. After this he was invariably known as 'the man that tried to cheer the Kaiser.'" We are told that the Kaiser "looked very handsome in green forestry costume."

One sparkling essayist was repeatedly impressed with the height of perfection to which eating and drinking have been brought in the Fatherland. "The Town Hall of Elberfeld is very fine," he writes, "and I imagine that few industrial towns could show such a fine council chamber. Underneath the Town Hall is the *Ratskeller*, a fine restaurant and town wine-cellar, presumably for the convenience of the councillors." This is a truly aldermanic touch.

And, again, in schoolboy fashion, "I should like to say a word about the best of German institutions—the *Automat*, or automatic restaurants. You can obtain all kinds of wines, coffee, and chocolate, sandwiches, and cakes by merely putting a 10-pfennig piece into the slot. These are most useful, and form another example of the high art." But one diarist lets fall a sympathetic tear at the absence of "tuck-shops" from the German schools—"one little amenity of English school life that is missing is the tuck-shop. True, an old man comes round at the pauses between lessons and sells various dried fruits, but I heard from one of the boys (on the last day, of course) that his habits of preparing them for sale were not above suspicion. Still, he did a good trade."

A paragraph on railways is worth quoting. "We always found the German carriages very comfortable, the third class being better than Belgian, or even English, second. In many Belgian carriages only a small part of the window can be opened. Also the German lavatory accommodations are much better than English or Belgian. In Germany not only is railway travelling cheap, but schools or school-parties are carried at a reduced cost, and this facility was accorded us." And again: "The stations are always clean and well built, for the Germans realize that stations and post offices"—Mr. Samuel might take note—"can be made an ornament to a town."

German beds were not so comfortable. "They have an unpleasant way of letting your feet come out at the end, if you turn about too much." But of the hospitality which sprang up everywhere—a thousand people waited in welcome at one station—there is abundant praise. "Three glorious weeks among the hospitable German people."

The steel works of Haniel & Lucy were visited. "Those of us who had cameras had to give them up. They have a good plan of hiding the dirty part of their factories," writes a future town-planner, "by erecting fine offices to face the street. In fact, it is only the tall chimney-stacks that let you know that Duesseldorf is a town of great steel-works. I was greatly impressed by the delicate adjustment of the massive-looking

hydraulic forging presses. We saw immense long propeller shafts being pressed into shape with ease."

Several naive touches come out in "doing" the Rhine. Castle Marksburg is best," confesses one young observer, because "it has not been 'modernized' like Stolzenfels." The arrangements inside rather appealed to the writer, especially the fireplace for boiling the lead to drop on people who attacked the Castle. Later on, in Frankfurt, a legend about a bridge across the Main caught the fancy of all the essayists. Here it is in the words of one of them. "When it was being built the two sides could not be joined together. They kept on breaking mysteriously in the night. In despair, the builders called the Evil One to help them. He promised to do the work for them if he was given the soul of the first living thing to cross the completed bridge. The wily builders drove a cock over the bridge."

A long sojourn was made at Godesberg, "among the finest watering-places in the Rhine Valley." The principal of the Paedagogium, a very large school, was particularly kind, and for days the London boys and German boys mixed as play-fellows. "We were greatly surprised," says the diarist, "to see a small zoo attached to the school. It contained many kinds of small animals and birds. They were all looked after by a special committee of boys." In the Palmengarten at Godesberg English music was played in honour of the young guests. At times the boys reciprocated by rendering German folk-songs learnt at King's.

The wine cellars of Deinhard & Co.—"which, by the way, we thought to be a very appropriate name"—the bottling of Godesberg natural mineral waters (some for King George), the cleanliness of the newer German towns, a Zeppelin airship, a music hall at which "many of the turns were English," the use of sand for blotting-paper in the Town Hall at Cologne, an evening with a German schoolmaster—"we drank 'Mai Bowle' and ate cakes and sang all kinds of songs, including 'Everybody's doing it,' which was much appreciated." These are a fragment of the themes on which these twenty "innocents abroad" make spicy comment. And the closing note is best: "We had a good reception indeed, which goes to point out that a friendly feeling exists between England and Germany." S. W.

SAFE NOVELS.

Enter Patricia. By E. E. COOPER. (3s. 6d. Cassell.)

"Patricia was a girl of strong sense and principle. Moreover, she had been brought up entirely by a man of public-school and University training; woman though she was, this education had given her mind balance and reasoning power not common in girls of nineteen." Not a very promising introduction to the heroine of a novel, and a woman critic is likely to observe that there must have been something defective in Patricia's education, as the first incident of the story reveals her absolute ignorance of the existence of tides. The chief actors, however, are a dare-devil brother and sister; and the plot turns on one of their wild escapades—the harbouring of an escaped convict—into which Patricia is led by the discovery that he is a lost sheep of her father, an East End parson. The convict, introduced as a crawling reptile, turns out a Jean Valjean, and Patricia ends by marrying the baronet. The thread round which the story is spun is somewhat thin and worn, but the Harrow boy and his twin girl sister are living characters; and the descriptions of the Cornish coast and of sailing are vivid and animated.

The Ffolliots of Redmarley. By L. ALLEN HARKER.

(6s. Murray.)

Mrs. Harker's last novel will delight her many admirers no less than "Miss Esperance and Mr. Wycherly," and we cannot award it higher praise. The six Ffolliot children all bear a strong family likeness, but they are as clearly differentiated as the children in Miss Yonge's "Daisy Chain," and the humours of the nursery are as spontaneous and natural as in Henry Kingsley's "Ravenshoe." The father is a study of the egoist, less subtle and elaborate, but no less convincing than Meredith's, and the youngest of the flock, Ger, is a brother of a boy to whom we lose our hearts, a hero who, true to the public school code of honour instilled into him by his elder brothers, suffers what to him is martyrdom sooner than blab.

(Continued on page 82.)

Mr. JOHN MURRAY

LIMEN: A First Latin Book

By Professors

WALTERS AND CONWAY.

The **FOURTH** (Revised) EDITION of **LIMEN** is now ready, 2s. 6d. Also a **TEACHERS' EDITION**, including the **APPENDIX** (Suggestions for Teachers on the Oral Method.) 3s.

The Recommendations of the Joint Committee on Grammatical Terminology have been followed throughout the book, except in three points of detail where the authors find themselves unable to accept the findings of the majority of the Committee.

ANTE LIMEN.

A New Latin Book for Younger Beginners. Compiled, under the Guidance of Professors WALTERS and CONWAY, by Miss R. H. REES, B.A. 1s. 6d.

MATTER, FORM, AND STYLE.

A Manual of Practice in the Writing of English Composition. By HARDRESS O'GRADY. 2nd Impression. 2s.

ENGLISH COMPOSITION.

By E. E. KITCHENER, M.A. Whitgift School, Croydon. 2nd Impression. 1s. 6d.

Especially suitable for the Oxford and Cambridge Local and similar Examinations.

ENGLISH GRAMMAR.

By R. B. MORGAN, M.Litt., Whitgift School, Croydon. 2nd Impression. 1s. 6d.

Especially suitable for the Oxford and Cambridge Local and similar Examinations. *The Recommendations of the Joint Committee on Grammatical Terminology have been adopted.*

GRAMMAIRE FRANÇAISE

ÉLÉMENTAIRE. Avec Exercices.

Post 8vo, cloth, price 7s.

THE STATIONERS' COMPANY, Stationers' Hall, London.

The framework of the story is slight, and the outsider who plays the leading part seems to us the one portrait where the artist has comparatively failed. Eloquent Gallup is the son of a country town draper who has made his pile, and he bears out Mr. Shandy's philosophy of names by getting into Parliament; but he never throws off the counter-skipper, and we have to take on trust the arts by which he wins the votes of the rustics and obtains a footing in county society. On the other hand, he serves as an excellent foil to the Ffoliot family, especially to Mary, the eldest girl, who champions him against her father's aristocratic snobbery, and goes all lengths short of falling in love with him. Your vulgar novelist would have married them.

The Coryston Family. By MRS. HUMPHRY WARD.
(6s. Smith, Elder.)

In this column all that can be allotted to what has been proclaimed by a host of reviewers as the novel of the season is an afterword. The first feature that strikes one is Mrs. Ward's pre-eminence as an impressionist. She sits in the Ladies' Gallery of the House of Commons, makes a thumb-nail sketch, and then renders it in words that make it clear and distinct as a Dutch painting. The same with the two country houses where the scene is laid. So, too, with the characters. They are not photographs, or even composite photographs; but we can often tell who has sat for a model, and feel sure that in each case there was a model. "Mr. Glen-William" is a transparent pseudonym, like Mr. Hewlett's "Bendick," but he is a lay figure, an Aunt Sally for everyone to have his fling at. What really interests the authoress (and her readers) is the religious problem, the struggle between the Church and free thought, and this is skilfully presented by the protagonists, Mr. Newbury and Lord Coryston. Our personal sympathies incline rather to the ascetic aesthete than the *frondeur* peer; but the double tragedy to which the Catholic law of divorce leads clearly shows that *tantum religio* is Mrs. Ward's last word. A secondary motive, less conspicuous but underlying the whole story, is a rooted antipathy to woman's suffrage. As one of the characters bluntly puts it, "When women meddle with politics it is the very 'devil.'" Whether the possession of a vote would make women more or less meddlesome is a pertinent question, but we are reporting, not criticizing. The novel ends abruptly. Mr. Lloyd-George goes down in another Titanic accident, and the Coryston property

is divided between the rival brothers—honours easy, but the Conservative wins the old trick.

Deering at Princeton: a Story of College Life. By LATTA GRISWOLD. (6s. Macmillan.)

This story of a young man's life at one of the "thirteen American colleges that count" is very readable, and seems as if it might be a true picture. Its tone is healthy, and the young man yields to the admonitions of his friends against gambling with a readiness we could well bear to see imitated a trifle nearer home. The Great Sandy is an object of worship among the juniors to an extent one hardly expects in the States; he is well delineated, and the athletic contests are also graphically described. A safe book for lads, but the way the young man renounces his inamorata out of friendship savours more of the passivity of Oriental than American women.

"Here are Ladies." By JAMES STEPHEN. (5s. net. Macmillan.)

Some American young folk were discussing a *risqué* novel. They decided that it was enchanting, but not suited for parents. The reviewer wonders how these "Ladies" ever found their way to the staid and serious shelves of the Journal; it cannot be recommended for Sunday or day-school libraries, but doubtless tired teachers will be glad to study the art of Mr. Stephen. It is delicate, allusive, suggestive; very real, and true to life. "The Triangle" is especially clever. A lady is married to a heavy, idle husband, and has just waked up to the fact that he is a shocking bore, and ought to be compelled to work, when her cousin comes to pay a visit. She finds the husband intensely interesting, but the wife promptly ejects the Snake from Paradise. The girl with three brothers—rude, opinionative, who pinched her and kicked her hat—makes another telling, impressionist sketch. She falls in with a young man of another type: "Every word he said was uttered tentatively: it was subject to her approval: and if she opposed a statement he dropped it instantly, and adopted her alternative as one adopts a gift. . . . He spoke, too, of the loveliest things imaginable—matters about which brothers had no conception, and for which they would not have any reverence." That is in the highest degree probable; but, when Mr. Stephen says that "the girl who has been reared among brothers has few defences against other males," the reviewer begs to hold a contrary opinion. These brief sketches—by an Irishman, it seems—show much psychological insight, observation, and a good deal of artistic simplicity.

For Next Term's Work in English.

THE MOTHER TONGUE

BY G. L. KITTREDGE AND S. L. ARNOLD.

The Mother Tongue bases the teaching of English upon inductive principles, and the practice of composition is encouraged from the very beginning of the lessons. Its purpose is to develop and encourage the power of expression through frequent practice in composition, first oral and then written, with the most familiar things as themes carefully arranged in a systematic sequence. In this way the child is led to appreciate the need for grammatical rules, which are gradually introduced and learned as the occasion for them arises.

THE PRACTICE OF ENGLISH

(Being Book II of the English Edition of "THE MOTHER TONGUE").

Edited by J. W. ADAMSON, Professor of Education in the University of London, and A. A. COCK, Lecturer in Education in King's College, London. [In the Press]

A sequel to the well known Book I, English Edition, of "The Mother Tongue" has been prepared for the use of Secondary Schools, and for the Senior Classes of Elementary Schools; it will be available in one volume or in three separate parts. This revision is based on Books II and III of the original work.

The new volume contains a complete course in composition and such grammar as is necessary for the more advanced practice of the mother tongue. A special feature is the adoption of the principal recommendations of the recent Report on Grammatical Terminology, published through the English Association.

The exercises in composition are also designed to serve as an introduction to literary appreciation and criticism. For the purposes of these exercises the book is well provided with examples of standard prose and poetry, as well as with numerous pictures.

The first part deals chiefly with narration and the auxiliary grammar; the second with description and its necessary grammar; while the third part is devoted to exposition and criticism, the rest of the grammar, and an appendix on prosody. The work also contains a short preface to the use of the book.

Book I.—Lessons in Speaking, Reading, and Writing English.

Revised by JOHN W. ADAMSON, B.A., Professor of Education in the University of London. 308 pages. Illustrated. Price 1s. 6d.

IN PARTS FOR USE IN THE LOWER FORMS.

In response to repeated requests from heads of schools all over the kingdom, the publishers have much pleasure in announcing that they now issue this well known book in a style more suited to the needs of the pupils in the lower forms.

The book is divided as follows:—Part I. 106 pages. 6d. Part II. 92 pages. 6d. Part III. 154 pages. 9d.

Each part contains numerous exercises—both written and oral—to help the pupil to speak and write his mother tongue; and passages of simple prose and poetry, chosen from standard authors, for reading and memorizing. There is nothing *cheap* about these books except the price. They are printed from the same clear type on equally good paper as the complete book. They contain the same illustrations and are strongly and attractively bound.

Complete Catalogue post free on application. Books sent on approval to Teachers.

GINN & COMPANY, ST. MARTIN'S STREET, LONDON, W.C.

GEORGE PHILIP & SON, Ltd.,

WALL ATLASES

Wall Atlas of Modern History

A Series of eight attractively coloured Wall Maps designed to illustrate those great changes in Political Geography which have characterized the main periods in the modern history of Europe.

By the insertion of essential names only and the use of strong colouring for the political features, the maps are rendered beautifully clear. The Wall Atlas forms a supplement to the School and Students' Editions of **Phillips' Historical Atlas**.

Set of eight mounted as Wall Atlas, on cloth, with roller, **35s. net**; singly, mounted on cloth and varnished, with roller, **5s. net** each; on cloth and dissected, with brass eyelets for hanging, **5s. net** each; set of eight mounted, dissected and eyeleted, in cardboard box, **37s. 6d. net**.

Detailed Illustrated Prospectus free on request.

Comparative Wall Atlases

Europe, British Isles, Asia, Africa (others in active preparation).

Edited jointly by J. F. UNSTEAD, M.A., D.Sc., and E. G. R. TAYLOR, B.Sc. Arranged for COMPARISON.

To show by eight maps the chief facts of geographical phenomena. Relief of Land, Pressure of Winds, Rainfall, Temperature, Vegetation, Industries, Population, &c. *The newest, most adaptable, and most educational maps obtainable.* Size, 43 by 33 in.

Unmounted, singly, **2s. 6d.**; on cloth, dissected and eyeleted, singly, **3s. 6d.**; cloth, rollers and varnished, singly, **4s.** Sets **21s.** and **27s. 6d.** Miniature Coloured Facsimile of the Europe set sent free.

The Europe and Africa sets are particularly useful for OXFORD LOCALS work.

School Atlas of Modern History

By RAMSAY MUIR, M.A., Professor of Modern History in the University of Liverpool. Over 121 Maps and Diagrams. Emphasis is throughout placed on the *physical basis* of historical geography, and careful attention is given to Colonial Development, Industrial Growth, &c. Demy 4to (11 by 9 in.), cloth, **3s. net**.

Essentials of World Geography

By J. F. UNSTEAD and E. G. R. TAYLOR. A broad view of the chief features of the earth and its inhabitants; expressed in a simple way for juniors. Third Edition, Revised and Enlarged. Containing a new Appendix on Map Projections, &c. **Particularly suitable for Junior and Senior Oxford and Cambridge Local Examinations.** Crown 8vo, 260 pp., with Diagrams and Maps, **2s.**

The "Piers Plowman" Histories

An entirely new Series, presenting history in different ways to suit the different stages of the mind's development: to the youngest as simple stories; to those a little older as elementary and picturesque descriptions of social conditions; to the elder ones as the development of national life and government. Pupils' books, beautifully illustrated and designed to induce a real and lively interest, and teachers' books containing a wealth of illustrative material. Seven Junior Books, from **9d.** Four Senior Books, from **5s. net**. Booklet, with specimen pages and coloured plates, free.

EVERYTHING EDUCATIONAL

FOR PUBLIC AND SECONDARY SCHOOLS.

FURNITURE, STATIONERY, REQUISITES.

STANTON DESK.

The "Stanton" is the best Desk of its kind. It is made in all heights, and it is not only the most comfortable Desk made, but is also built on hygienic lines, and satisfies the aesthetic sense of form and colour.

Supplied in Oak, Pitch Pine, and White Wood, stained various colours.

Manufactured and supplied direct from our own Factories.

CHAIR DESK.

A desk with separate chair is now being adopted in many girls' schools. This arrangement has many advantages. The Chair and Desk are not more expensive than desks of the ordinary pattern.

Price of each set, 19/2

All kinds of Furniture, including Cupboards, Lockers, Easels, Blackboards, Chairs, Carpenters' Benches, Fittings for Laboratories, &c.

ART DESK AND EASEL.

Patent No. 11107.

This combination of an Art Desk and Easel has many advantages.

The desk portion can be raised, used flat, or it can be adjusted to any angle. The book shelf slides backward and forward, and can be used as a support for a drawing board or blackboard.

The size of the top is 26 x 16 in., and can be folded to occupy about 18 in.

EXERCISE BOOKS.

(As Illustration. Registered Design.)

Superior Paper. Artistic Style. Exceptional Value.

Price 18/- per gross.

Containing 96 pages; bound in stiff leatherette cover with embossed tinted label, which can be printed with name of School if required. The books are supplied in various rulings.

An immense stock of Exercise Books in all qualities and prices ready for immediate orders.

NATURE NOTE BOOKS.

Nature Note Books—the best and most complete series issued—made of excellent writing paper, interleaved with superior cartridge paper, and strongly bound—at 18/- per gross and upwards.

SCIENCE NOTE BOOKS.

The most accurate Series issued. In various Rulings, including $\frac{1}{10}$ and $\frac{1}{2}$ in., $\frac{1}{15}$ and $\frac{1}{2}$ in., millimetre and centimetre, 2 mm. and 2 centimetre, at prices 9/-, 18/-, 27/-, 54/-, 78/-, & 108/- per gross.

Graph Papers in all Rulings.

SIMPLEX MARK JOURNAL.

An excellent form of Pupil's Journal. The marks are entered by the pupils themselves. No extra work for the Class Master or Head. The records made promote keenness, neatness, and punctuality among pupils, and are of the greatest value to the school and parents.

For Boys' and Girls' Schools,
One Term, 3/- per doz.

TEXTBOOKS, MAPS, and DIAGRAMS.

The despatch and accuracy of our Book Department are exceptional. We carry the largest stock of Educational Books in London, and urgent orders are dealt with by our trained staff of assistants immediately on receipt, urgent orders being sent by return mail.

Full particulars on application to the PRINCIPAL.

MADAME BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIAC TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

STANSFELD TRUST. THE SCRUTINEER issues

Reports on all Bills, Public and Private, as they are introduced into Parliament, that

COMPLETE IN ONE VOLUME, 7s. 6d. net.

"It is a masterly work; the numerous maps, coloured and uncoloured, with plans in the text, are of unusual excellence and value."—*The Educational Times*.

"It is exceedingly well written, it contains scholarly references at the end of the chapters, a measured enthusiasm beats through the book and gives it unity and interest. In other words, it is a book, not a textbook, and is written by a man who is a good teacher because he is thoroughly conscious of the dignity and capacity of his theme."—*The Journal of Education*.

PATON'S LIST OF SCHOOLS AND TUTORS.

An Aid to Parents in the Selection of Schools.

1216 pages, crown 8vo. Red Cloth, 2s.; post free, 2s. 6d.
SEVENTEENTH EDITION NOW BEING PREPARED FOR PRESS.

THIS BOOK secures for its advertisers a far larger proportion of *definite results* than any other publication of its kind.

PUBLICITY.

The Army and Navy Gazette.—"PATON'S LIST OF SCHOOLS is quite invaluable to parents. It is carefully written and revised, and the articles on the Navy and the Army and how to enter them are particularly recommended, for they are compiled with skill and expert knowledge."

The Daily Telegraph.—"PATON'S LIST OF SCHOOLS AND TUTORS is more than its name implies. Not only are there classified lists of the boys' and girls' schools of the United Kingdom, training, nursery, kindergarten colleges, &c., but particulars are given in a concise and practical form of many of the best of them, to assist parents in their choice. Arrangements are made so that the List may be consulted at our Consulates and Embassies, and in the best home and foreign hotels, while it is included in the libraries of a score of the principal steamship companies."

The Standard.—"A useful compilation that has fought its way to the front as an *accurate fingerpost* to parents in their choice of schools."

The Journal of Education.—"This annual, now in its sixteenth year of publication, as it grows in bulk, increases its usefulness. A parent in search of a school for boy or girl has only to turn to the map and index and he will find sufficient information about the schools, public and private, available in any large town or neighbourhood to enable him, not indeed to make his choice, but to select the few which will *prima facie* suit his requirements. To most schools a photograph of the buildings is attached, and photographs, unlike prospectuses, cannot lie."

The Yorkshire Post.—"Contains all the features which in the past have established it as a safe guide to schools."

The Scotsman.—"Parents who are deep in the question: Where shall we have our boys (or girls) educated? can have no better aid to its answer than is afforded by PATON'S LIST OF SCHOOLS AND TUTORS."

The Montreal Star.—"The Guide to the Schools of the United Kingdom, issued by Messrs. Paton, is so complete and so carefully compiled that anyone requiring information regarding British educational institutions cannot do better than have recourse to it."

RECOMMENDATION.

INDIA, 25.9.1913.

"We have to thank you very much for the trouble you have kindly taken on our behalf, and we feel that but for you we would not have been able to make a proper selection of school, and to get this at terms within our means, so that we can continue to keep the boys at the school on a permanent footing."

LONDON, 13.10.1913.

"I have sent my little boy to — School. He is very happy there, and well looked after, and I am very pleased with everything I saw there. Many thanks for the great assistance you were to me."

COLCHESTER, 13.9.1913.

"I am extremely obliged to you for the great help you were to us, and for sending us such a splendid selection of schools, and shall most highly recommend your Agency to any parents requiring schools, for with your help it is no trouble at all."

BRISTOL, 18.8.1913.

"My son returned home yesterday from the Tutor with whom I placed him on your recommendation. We are well pleased with his progress and the way he has been looked after. I now wish him to take a course of Chemistry and Physics, and should be glad to know of a good place. Friends have given me some names, but your experience will be of far greater value."

EDINBURGH, 5.9.1913.

"Two years ago you placed my daughter in — School. She has made splendid progress there. I now propose to send her abroad, and should be glad of your help, as I know that anything you recommend can be thoroughly relied upon."

HAMPSTEAD, 2.10.1913.

"We have to thank you very much for your courteous assistance in placing D—. It is just the school she required, and we feel we were fortunate to have had the benefit of your knowledge in the matter. Next year we shall be sending our younger daughter to school, and shall certainly seek your advice again."

MANCHESTER, 14.7.1913.

"I cannot thank you enough for your help in finding me a suitable school. I am exceedingly pleased with — School in every way."

HODDESDEN, 20.9.1913.

"I promised to let you know how my son fared with the Coach to whom you recommended me some time ago. He was delighted with everything, and he could not have been better placed from an intellectual point of view. The stay has been quite an education, and I am happy to testify that it has broadened him generally."

PUBLICITY plus RECOMMENDATION.

"You will be pleased to hear that we shall have two more girls through a pupil whose parents saw our advertisement in your book. We have already had four girls through the same source, though this pupil came to us only eighteen months ago."

Specimen Copy with full particulars forwarded free to PRINCIPALS ONLY on receipt of application with copy of School Prospectus.

OCCASIONAL NOTES.

THE Conference Week of Educational Associations—now a *fait accompli*, as our Conference Supplement testifies—has suggested to the President and Council of the Teachers' Guild the formation of a separate and independent Society of Education to carry on this special work of the Guild, and by means of other meetings, local branches, and the publication of transactions, to promote the study of Education as a science. Few are old enough to remember the old Education Society, of which A. Bain, S. Laurie, E. Thring, R. H. Quick, and its founder, C. H. Lake, were leading members. It formed the nucleus of, and was absorbed by, the Teachers' Guild, and it is a natural step in evolution that the Guild should attempt to unite in one body all the various associations of teachers which have since sprung up, and enlist at the same time all who as legislators or administrators are actively interested in education. There is, however, no intention that the new Society should absorb the Guild, which, it is hoped, will carry on and extend its social, economic and legal sphere of work while co-operating with the Society. The draft constitution is, as we write, being considered by the Council, and we hope to be able next month to publish the details.

VISCOUNT BRYCE—whom we congratulate on his well-earned peerage—in his address to the Conference of Educational Associations asked why English boys cared so little for learning, and suggested many answers, without plumping for any one of them. No doubt the weakness of our young barbarians was correctly diag-

nosed, though when we compare them with their German cousins we must remember how much the *Einjährige* system stimulates the young Teuton's thirst for knowledge. We are inclined to think that the national carelessness about intellectual pursuits springs very largely from two causes, both historical. The first is the fact that we won our position in the world at an epoch when knowledge and brains counted for much less in the race for wealth and power than they do at present. The second is the predominance for generations in our public schools and grammar schools of a system of education which appealed only to a few and presented itself to the many as an unintelligent grinding at the mill. But, whatever be the cause, the desire to *do* something is one of the bedrock facts of the British schoolboy's mentality. Even our old classical education recognized this, and attached far more importance to writing prose and making verse than to assimilating the matter of the authors read, whereas in German schools the order of these elements in importance is reversed. The practical deduction from these considerations is that any system of modern education which we evolve must give full play to this desire for creative activity, or it will not be a success.

THE Private Schools Association is at present halting between two opinions, and it is hard to determine from the utterances of the leaders, which we report elsewhere, whether it will decide to stand aside in splendid isolation or take its place in the organization of national education, and, as a necessary corollary, submit to some form of public inspection. Dr. Sibly is an individualist who holds that the State is a monster without one redeeming virtue, that in education for the last quarter of a century *nihil quod tetigit non foedavit*, and apparently would restore the Heptarchy, the dames' day schools, and Dotheboys Halls. But even Dr. Sibly has advanced since 1888, when the President of the P.S.A. thanked Providence that he was not a teacher on the other side of the Channel, bound to have his name registered as though he were a dog. Now Dr. Sibly sits as an active member of the Teachers' Registration Council.

MR. MICHAEL SADLER played, as usual, the part of mediator. He saw no reason why all schools in England should be licensed by the State. On the Continent schools were subject to State supervision—first, in order to secure a high standard of teaching; secondly, to prevent the propaganda of political opinions subversive of the established form of government. In England we could not presume to-day, as did German statesmen a century ago, to lay down authorized curricula and courses of study, nor was there in England any danger of anarchical or disloyal teaching. Yet he counselled those private schools which occupied a place in the public supply of education and in which the instruction was elementary, to submit themselves to inspection. "Where a private school existed as a protest against the dominant public ideal, registration or inspection would be a peril to its *raison d'être*."

WE confess the distinction drawn by Mr. Sadler does not seem to us very clear, and in all this discussion there is much confusion of thought. The worst that

The Bugbear of Whitehall.

private schools have to fear is a Bill authorizing the Board of Education to inspect all schools, with a view to recognizing those that are pronounced by its Inspectors efficient. No statesman to our knowledge has ever yet proposed to make it penal to hold a school or teach without a licence. The real complaint of the private teachers is not loss of liberty, but the threat of painless extinction by under-selling. But against this the only remedy is to submit to inspection. We would gladly see County Council scholars admitted to them, and even grants awarded in certain cases by the Board, but obviously they cannot claim to receive public moneys without an audit. The inquisitorial terrors of Whitehall that Dr. Sibly conjures up are purely chimerical. Schools, both public and private, which have voluntarily submitted themselves for inspection, have found in the Board's Inspectors no Egyptian taskmasters, but sympathetic advisers and well-wishers, such as Egeria found in her Numa, who is now Dr. Sibly's principal witness against Whitehall.

SIR JOHN MCCLURE seemed to be in a somewhat pessimistic mood when he addressed the Head Masters' Association as their President. The result of the Act of 1912 had been to put schools into the hands of the "practical man," with the result that an education was demanded which the practical man could appreciate. No doubt the danger he pointed out is a real one, but in our opinion it is more than counterbalanced by the greatly increased interest taken by the public in education. We have not the slightest doubt of that increase of interest; the columns of the daily press are sufficient evidence of it. Nor do we agree that the unpopularity of education is growing. No doubt the public frets over its big school bill, but it is much more ready to foot such a bill than it ever was before, and the demand for efficient education is greater than at any time within living memory. But when Sir John spoke of the shortage of teachers, due to the bad conditions of the teaching service, he was on firmer ground. And when he alluded to the growing celibacy of the profession, illustrating it by the fact that two years ago 49 out of the 63 assistant masters at Eton were bachelors, he drew attention to a very serious evil. A celibate teaching order is the last thing that we want to see.

A DEPUTATION consisting of representatives of a number of educational associations, and headed by Sir John McClure, urged upon Mr. Pease the other day that, if the Exchequer grants for education are increased, some portion of the increase should be assigned to the improvement of salaries. The Minister, we are told, promised that the Government would give the suggestion "sympathetic consideration." Such an allocation, though obviously a stubborn governing body could easily evade it, would probably have considerable effect in the direction desired, but the proposal is a curious example of our haphazard British methods. The scientific way of approaching the question would be first to decide what is the real cost of carrying on a school efficiently, and then to divide that cost between rates, grants, and fees in just proportion. But nobody seems to know what ought to be paid for good secondary education, and all that

we can even propose to do is to scrape up as much money as possible from various sources.

IT not infrequently happens that while we are all eagerly discussing great questions of pedagogy, small administrative questions, on which much depends, are overlooked. We hear much of the higher aims of education, we discuss the development of individuality, the Jaques-Dalcroze method, and the best means of inspiring a love of literature; we argue fiercely whether our popular education is a success or a failure, and those of us who believe it is a failure are ready with any number of reasons why it must and ought to fail. Meanwhile few people know that the County Council is forcing upon London schools a system of promoting children which is almost sufficient in itself to ruin any system of education. All classrooms must be kept full, so runs the Council's decree, and boys and girls must be moved up so as to keep them full, without regard to their fitness or the welfare of the class into which they are moved. This no doubt may seem a small matter to zealous reformers with schemes in their pockets for revolutionizing education, but to the teachers whose efforts are hampered by this absurd system it is no small matter. The amateurish officialism of the London County Council is doing more harm to the schools than all the schemes of the reformers could do good. We comment elsewhere on the recent steps taken by the L.C.C. to burke inquiry.

WE regret the tone of Sir F. G. Kenyon's address to the Classical Association, because we think it is likely to do harm to the study of Greek, and we do wish to see Greek hold its own and put forth new branches. To claim for those who have studied the classics a monopoly of culture and wisdom, to suggest that no one who cannot read Sophocles in the original can ever hope to be anything but a barbarian—this line of argument is idle, because nobody really believes such violently one-sided statements, and it is injurious to the classics, because it suggests that the study of Latin and Greek conduces to narrowness rather than to breadth of mind, and that in particular to read the Hellenic literature is to eat of some insane root that takes the reason prisoner and prevents the appreciation of other literature. Again, to argue that we must teach boys to read Aeschylus so that they may be able to appreciate Shakespeare is a flagrant case of putting the cart before the horse. Understanding of the native literature must come before the understanding of any foreign literature. Greek would surely be the gainer if its supporters would drop these artificial and unreal arguments, and would try to show the public what there is and what there is not in Greek art and literature (for the modern man needs an immense deal that the classics cannot give him), frankly recognizing that Hellenic authors do not appeal to everyone, and that two persons may differ in taste without either of them being a boor or a philistine. Finally, is there any evidence that the decay of Greek in the schools has been followed by any diminution of the general interest in Hellenic letters? Do not all the signs point the other way?

THE discussion on the teaching of history in elementary schools at the London County Council Conference was rather disappointing. Canon Masterman

History in Elementary Schools.

was, as he always is, eloquent, and his address was full of lofty feeling; but the teachers present would, we think, have welcomed some practical advice. Prof. Vickers' plea for local history was overcharged and not very helpful to the London teacher. It is a perverted view that everything that has happened within the four-mile radius is part of the local history of the capital. Nobody really threw any light on the problem of what or how much history can be taught in elementary schools—a question than which there are few more difficult in the whole range of education. We cannot help thinking that the organizers of the Conference make a great mistake in putting so many lengthy papers on the program. After three very solid courses no one has much appetite left for savouries and sweets in the way of discussion. We suggest that next year they should try the plan of introducing a subject with two twenty-minute papers, and see if that does not produce a more fruitful discussion.

MR. BOLTON KING, at the same Conference, gave an encouraging account of the prefect system in Warwickshire, and a London Head Master spoke of its good effects in his own school. Among the head teachers in Warwickshire who have tried it there seems to be a general opinion that the prefects have had a good influence in reducing swearing, putting down bullying, improving street manners, and fostering habits of tidiness, decency, and cleanliness. Of course, the system is in the experimental stage, and the Warwickshire lads are no doubt sweeping with the proverbial thoroughness of new brooms, but we have good hopes of the scheme. The misfortune of the elementary school child is that his life is cut up into two halves, the one spent in school under strict discipline, and the other spent in the streets in completelicense. Of self-imposed discipline, or social discipline, he has known little. But it is just this discipline which is the most valuable for the making of a man. He is getting some discipline of this kind now from games and from scouting; he will get more from a prefect system. The absence of tradition was mentioned by more than one speaker at the Conference as a difficulty, but it is not altogether a disadvantage. If good tradition is absent, so is bad. The code of the public-school boy does not always coincide with the dictates of the highest morality. One warning we would give, which we are sure every public-school man will endorse: a prefect system cannot be set going and left to run alone—it needs careful watching. Prefects must work independently, certainly; but, at the same time, they must feel that the eyes of the staff are upon them.

SIR HENRY MIERS, in his Presidential address to the Modern Language Association, deplored "the extraordinary inability to write decent English shown especially by science students." It is an old text, but one on which too many sermons cannot be preached. What is the reason of this weakness? Sir Henry attributed it in large part to the lack of practice in translation. He declared that many students of modern subjects have not learnt French or German long enough or in such a way as to enable them to write a good version of a foreign author. This is another testimony to the deleteriousness of the modern habit of teaching subjects

in watertight compartments, against which Mr. Cloudesley Brereton and Mr. Chaytor protested at the same meeting. The teacher of modern languages is told that he has nothing to do with teaching English, and the result is a serious blow to the writing of English.

BUT this is far from being the only reason for the science student's deplorable lack of command of his mother tongue. What is not understood is that the power of self-expression—whether with tongue or pen—cannot be successfully developed if practice is given only in lessons set apart for that particular purpose; it ought to be a natural part of the learning of every subject. The old rule was that every lesson should be a lesson in English, and we are not yet convinced that it was an unsound one. Teachers are too much enslaved to the idea that writing English means simply writing essays. The truth is that that is only one form of composition, and for most of us not the most useful. It is equally necessary that boys and girls should learn to relate their own experiences tersely and intelligently, to describe what they have seen, to reproduce and comment on what they have read in books, to give answers of some length to questions in history and geography, and to write letters. Verbal and written descriptions of phenomena and experiments should form part of the work in every laboratory. Probably many teachers of science are under the delusion that such descriptions are easy, and that to write them comes by nature. The truth is that to describe accurately, tersely, and intelligibly what you have seen is very much more difficult than is imagined, and the power to do so is certainly not the natural inheritance of the British schoolboy.

DR. BOAS did good service at the London County Council Conference when he reminded his audience that strenuous work and achievement possessed an interest of its own for boys and girls, whatever the subject of study might be. We are all trying so hard to find means of interesting children in their work that this fundamental truth is frequently forgotten. Yet nothing can compare in charm with achievement which is the result of effort, and nothing grips the mind like effort which may be expected to end in achievement, whether the achievement has or has not any practical value or any relation to actual life; countless boys have found happiness in making Latin verses or in solving algebraical puzzles. This is not an argument in favour of making all boys and girls write Latin verses or solve quadratics, but it is an argument in favour of making them all do things which need a severe effort. Drudgery itself is cheerfully submitted to if it is seen that it leads somewhere; it is only against the drudgery that ends in nothing that school children kick.

ON another page will be found a vigorous defence by Dr. Rouse of the Direct Method as applied to Latin. It is not often that the Journal is called upon to meet a charge of ultra-conservatism, and, in basing the teaching of classics on the Reader in place of the old Latin Primer and gerund-grinding, Dr. Rouse has had no more active supporter than the Journal. Our contention was, and still is, that conversation cannot take the same place in Latin that it does in French teaching. French is, or ought

English in every Lesson.

The Interest of Achievement.

The Writing of English.

Conversational Latin.

to be, spoken by the master as readily as his native tongue. Latin is a dead language, and to adapt it to the life of to-day is a *tour de force*. French conversation leads on naturally to French literature. Latin conversation, Dr. Rouse contends, will similarly lead on to Plautus, but it is no prelude to Virgil or Tacitus; and how many boys who leave the Perse school at sixteen or even eighteen will keep to their Latin for the sake of reading Plautus or Petronius? In the Jesuit schools at Rome the speaking of Latin out of school was forbidden for fear of corrupting the scholars' latinity.

THE Vice-Chancellor of the Leeds University was taken to task in the *Nation* for encouraging undergraduates to take part with the citizens of Leeds against the municipal employés on strike.

Syndicalism. The question seems to us to turn on the gravity of the crisis. Municipalities, like other employers of labour, may be hard taskmasters, and labour may be justified in combining to resist them, though the capital they represent is public property. But when not only the business, but the very life, of a city is threatened as it is by cutting off the supply of gas and water, the community is bound in self-preservation to enlist all the forces of order and settled government in resisting the attack. *Salus populi suprema lex*. All would agree that it is most undesirable for those *in statu pupillari* to be mixed up in local politics, and had it been a municipal election, or even a tram strike, the University authorities might have forbidden undergraduates from interfering. Even syndicalists would allow that the London medical students were fully justified in turning "blacklegs" to supply the hospitals with coal.

LOCAL AUTHORITIES.

THE concise statement of statistics relating to the receipts and expenditure of Local Education Authorities in the year 1911-12 issued by the Board of Education is of great value. It is very properly pointed out, however, that it is unsafe, on the basis of these figures alone, to make any general inferences as to the financial or educational policy of a particular area or type of area. Such inferences can only be properly made after a full study of all the conditions obtaining in the areas under review. These conditions, of course, vary very greatly, and it is difficult, and often impossible, to present them in a summary statistical form. The function, therefore, of the statements now issued is to suggest and guide, rather than to supersede, further investigation; they are the beginning, not the end, of a scientific inquiry.

THE total expenditure on elementary education in England and Wales in 1911-12, including loan charges, was £24,685,125, or 92s. per child. The relative cost, and the produce of a penny rate, per child in the different administrative areas varied as follows:—

	Cost per Child.			Produce of 1d. rate per Child.		
	£	s.	d.	£	s.	d.
London	7	7	10	5	5	
Counties (excluding London) ...	3	19	4	2	11	
County Boroughs	4	9	1	2	7	
Boroughs	4	0	11	2	11	
Urban Districts	4	16	10	2	4	
Average	4	12	0	3	1	

Having regard to the amount produced by a penny rate in London, the relatively high average cost per child in that area does not represent a heavier burden on the rate-payers than that which the relatively small cost per child in the other counties imposes upon

the rate-payers of those areas. That is, if the total cost per child had to be met by rates, the total rate would be a little over 2s. 3d. in both cases. The municipal boroughs appear to be similarly situated; but as regards county boroughs and urban districts, rates of 2s. 10d. and 3s. 5d. respectively would be required to produce a similar result.

IT may be of interest to correlate the sums paid in teachers' salaries in a similar manner. The figures are as follows:—

TEACHERS' SALARIES.		
	Amount.	Per Child.
	£	s. d.
London	2,753,093	84 8
Counties (excluding London) ...	5,712,318	53 2
County Boroughs	4,878,045	58 0
Boroughs	1,505,686	55 5
Urban Districts	1,052,584	61 9
Total	15,901,726	59 3

Here, again, assuming the salaries to be paid out of rates, the expenditure of urban districts would be equivalent to a rate of 2s. 2d.; county boroughs, 1s. 10d.; boroughs, 1s. 9d.; counties, 1s. 6d.; while in London the relatively high salaries paid by that Authority would only amount to a rate of 1s. 3d.

BUT of course the Government grant is not in proportion to the expenditure incurred, and therefore a higher assessable value per child only partly compensates for greater expenditure on each child in average attendance. The following table shows the total grants paid by the Board of Education per child, the net expenditure to be met by rates, the equivalent rates, and the percentage of total expenditure contributed by Parliament and by rate-payers.

	Grants.		Rates.		Equivalent Rate.		Percentage.	
	s.	d.	s.	d.	s.	d.	Grants.	Rates.
London	40	6	105	8	19	5	28	71
Counties (excluding London)	41	9	35	6	12	3	54	45
County Boroughs	43	7	43	8	16	9	49	49
Boroughs	41	11	37	6	13	0	52	46
Urban Districts	50	2	45	1	19	2	52	47
Average	43	7	53	6	16	2	47	52

In reviewing these figures, it is to be remembered that, while compared with sixteen years ago, say, the Government contributions for elementary education have nearly doubled, the demand upon the rates has more than trebled. This, of course, was due to the Act of 1902, which made Local Authorities responsible for the efficient maintenance of all schools.

THE average expenditure on School Medical Service, it appears, represents the comparatively small figure of 9d. per child in average attendance. As about 25 per cent. of the children in average attendance are medically inspected, the actual cost of the service is therefore about 3s. per child. It is a branch of public work which may be extended with advantage, and now that the lever of a Government subsidy is available, it may be taken for granted that the extension will be rapid. Several Local Education Authorities are taking steps to provide further facilities for medical treatment. In Devonshire expenditure is to be increased by over £2,000, and the Gloucestershire Authority have adopted proposals for the dental treatment of children at an estimated cost of £2,270. The East Riding of Yorkshire Committee have adopted a scheme for dealing with the worst cases of defective eyesight. Selected children will be visited at various centres by ophthalmic surgeons, whose services it is hoped will be secured on payment of a retaining fee and a fee of 5s. for each child treated.

AN interesting report has been issued on dental treatment at the Worthing School Clinic, which was opened about a year ago. During the year, 902 children under eight years of age were examined, and of these 880, or over 97 per cent., had teeth requiring attention. Some 393 special cases amongst older children were also dealt with. The 907 young children had 19,142 teeth, of which 15,649 belonged to the "milk," or temporary, set. Of these, 3,820 were hopelessly decayed, and in many instances doing serious damage to the health of the child and to the teeth of the permanent set forming beneath them in the jaw. Of the 3,624 permanent teeth, 3,463 were sound,

62 hopelessly decayed, and 92 required filling. The time occupied by the dentist was altogether 54 half-days, or 162 hours, 45 hours of which were devoted to inspection in the schools and 117 to treatment at the clinic. This work was undertaken by the Worthing Committee as an experiment, and it has indicated that there is abundant scope for remedial work of this kind, and that the results are very beneficial.

THE statistical report of the Board of Education for 1911-12 does not appear to indicate that the supply of teachers is at present likely to meet requirements. It may be estimated approximately that 10,000 certificated and uncertificated teachers are needed each year to repair the wastage and to provide for new schools and improvements in staffing. The number of pupil teachers in respect of whom grants were paid was 4,638 (nearly 2,000 less than the previous year), and the Bursars numbered 2,765, as compared with 3,217 in 1910-11. If 1,707 student teachers are included, the total number of boys and girls in preparatory training is 9,110, and, as the normal course is two years, half that total represents the "supply." The position appears to be a very serious one, and it is doubtful whether the proposals for enlisting recruits in the rural districts will go very far in the direction of making up the deficiency.

SCIENCE NOTES.

IN his presidential address to the Association of Science Masters Prof. H. B. Baker dealt with several matters which touch the members nearly. He did not shrink from expressing his personal views on matters of controversy, and did not expect, nor did he obtain, the assent of his hearers to all his views. But there were no dissensions when he said, "How often is it triumphantly declared that a boy who has been educated on the classical side is superior to one brought up on the science side! I wish, for just one year, that the science masters could have their pick of the boys in all the public schools. I warrant that that statement would never be made again."

PROF. BAKER went on to caution parents against sending boys into engineering works without sufficient training in mathematics and science. He urged that the intending engineer should give most of his time during the last two years at school to mathematics, chemistry, physics, and *both* French and German, "of which languages he should have a speaking as well as a reading knowledge." He thought that the Home and Indian Civil services would benefit greatly by admitting more science boys. He also drew attention to the fact that, even now, for every industrial research chemist in this country there are twenty in Germany.

PROF. TURNER was only repeating a popular error when he stated in his lectures to juveniles at the Royal Institution, "Aristotle said that a weight of 10lb., for example, fell ten times as fast as a weight of 1 lb." In a letter to *Nature*, Captain Hardcastle points out that Aristotle said nothing of the kind. The passage in the "Physics" which appears to have misled so many, including perhaps Galileo, refers to the limiting velocity of a solid falling through a resisting medium, and it seems that Aristotle's ideas are quite concordant with modern gunnery research. Sir George Greenhill points out that Galileo versus Aristotle can be shown off in a tumbler of soda water, where a bubble starts off with double Galileo's gravity acceleration and nearly attains the terminal velocity of Aristotle before reaching the surface.

THE discussions at the Public School Science Masters' meeting were of a practical character, the dominant idea being to answer the question, "How to make the best use of the boys' time in lecture-room and laboratory." In discussing the division of the time between lecture and practical lessons, one speaker pointed out the advantage of a room which was both lecture-room and laboratory in one. This enables a transition from the one kind of work to the other at any moment, which is of great value when heuristic methods are followed. We may point out that this arrangement results in economy of building and fitting out, also of the laboratory assistant's time. But it is not desirable to work two classes simultaneously,

so that the arrangement is uneconomical in so far that one half of the room is usually unoccupied at any given moment.

THE *London County Council Gazette* for January 19 contains sound advice on the manipulation of optical lanterns in which limelight is used. It is assumed that a blow-through jet is used (and beginners should not attempt mixed jets unless they are accustomed to laboratory work), and the advantage of a small, bright, and accurately focused picture is rightly insisted upon. A 6 ft. picture in a school hall and a 4 ft. picture in a classroom are recommended. We would add that a border formed by the unilluminated margin of the screen greatly enhances the artistic effectiveness of pictures.

IN our December notes we referred to the micro-telescope which has been brought out by Messrs. Davidson & Co. The instrument, when a triple objective of $5\frac{1}{2}$ in. focal length is employed to form the real image in the place of a micro-slide, is highly efficient for observing small animals. The colour-correction of the objective is good, and we can foresee many uses for this invention in school laboratories both physical and biological. The flatness of field is not the least of its advantages.

THE Mathematical Association held its annual meeting at the London Day Training College on January 7. A report on the mathematical work for non-specialists in schools was presented by the Teaching Committee. The guiding principle appears to be to develop fruitful mathematical concepts rather than skill in manipulation of symbols. It is recognized that the mathematical boy specialist—e.g. the future engineer—must have the practice in algebraic manipulation; but this is not vital to the development of the mathematical intelligence needed by the ordinary citizen. At the same meeting Mr. Carson expounded his views on the teaching of graphs, with an eye more particularly to inculcating ideas of functionality. Dr. W. N. Shaw gave an outline sketch of the powerful researches which he has made into the dynamics of the atmosphere. The London Branch will meet, on February 7, at the Regent Street Polytechnic, and will hear an address from Dr. Dyson, the Astronomer Royal.

THE TEACHING OF NATURE-STUDY.

By A. R. HORWOOD, Leicester Museum.

III.—DIFFICULTIES AND THEIR REMEDIES.

IN the endeavour to formulate some definite principles for the efficient teaching of Nature-study in the schools, certain questions have arisen which appear to lie at the root of the difficulties that teachers put forward as effectual hindrances to Nature-study work. How far can these difficulties be removed by the utilization of museums? The points which require clearing up may be dealt with under the five heads which follow.

Lack of Material in the Schools for Illustrating the Official Syllabus.—One of the defects of the now antiquated science syllabus is the lack of intelligent choice of types for the study of principles. Thus, for teaching zoology, such animals as the cat, the dog, and the giraffe are recommended. Similar stereotyped examples are chosen to illustrate the principles of botany, and so on.

In the first place, the matter of the syllabus, carefully tabulated as it is for the edification of the teacher, is obviously not intended to be illustrated when adapted for the pupil by *actual* specimens; but, unless Nature-study rests upon a basis of objects, its value and *motif* are at once destroyed. Moreover, the value of Nature-study lies especially in the use of common objects, which can be easily secured, handled, and studied from every point of view and whenever required.

It would be practically impossible for a lesson upon the giraffe to be illustrated by a specimen in the school. True, giraffes can be seen in museums; but it was not the object of the syllabus to encourage the use of the museum. Apart from this, except where there is a zoological garden, the use of exotic animals, even if they can be seen in a museum, is ill

advised, because half the interest in an animal or plant dies with its death.

If, however, common types are chosen, then the children can collect in the neighbourhood specimens selected in the syllabus, and can in school or out observe for themselves the points of interest and importance. And, as the great value of Nature-study rests upon observation, it is essential that common types should be chosen.

Here comes in the necessity of the school museum. Good examples of all the common objects to be studied and others of interest should all be found in the collection. But it is the common failing of the school museum that it contains anything and everything but the thing required when the time comes to use it. It is not surprising, therefore, that teachers, as a rule, bemoan the lack of material for illustrating their syllabus; but this should not be difficult, except in thickly populated districts, and even there it needs only a little zeal to devise ways and means of co-operating with other centres more favourably situated.

Hence, amongst other reasons, comes in the importance of a close co-operation between museums and schools. For if there is no school museum, or if it is, as is so often the case, deficient in common material, then there is no means of illustrating the lessons in school except by a visit (or rather a series of visits) to the local museum. There all the common objects in the natural history department, at any rate, can be seen, as well as the rare or unique specimens not likely to be seen elsewhere.

The object of a museum is obviously to encourage a use of the collections it deals with. It is not strictly its function to go outside this principle and to start collections elsewhere. The formation of a travelling exhibit, which may consist of a type or index collection of common objects to illustrate principles, and may be lent to one school after another in rotation, is a practice which has been adopted in many centres; but it is really, properly considered, only an adjunct or subsidiary aid, which must not be a substitute for museum visits. But, properly used, it serves as one solution of the difficulty as regards lack of material in the school for illustrating the syllabus.

Another mode of assisting schools is by the loan or donation of duplicate specimens from the museum collections to illustrate some definite subject. Most museums have large stocks of such material. The staff are often able to supply duplicates of their own collecting, conversant as they usually are, or ought to be, with all the natural resources of the district. Thus a set of local rocks to illustrate geological principles could easily be supplied. Botanical and zoological specimens can similarly be provided. But it is incumbent upon school teachers that they should know what they want. If these conditions are fulfilled, the first difficulty may be overcome.

The Difficulty of Numbers.—A common plea raised against the visit of children to a museum is the initial difficulty of bringing classes of sixty or more to see the same specimen at the same time. As museums are arranged, this is a physical impossibility. The most obvious remedy is to reduce the number of children in a class. But this, whilst a national need, affecting all subjects, is, under present regulations, impossible. Another solution is the subdivision of the class into sections, and the sending of one contingent at a time. But this demands a multiplication of teachers, and this again, under present conditions, with the great shortage of teachers, is rarely practicable.

A third suggestion is more feasible. This is the setting apart of some one room in a museum, preferably not open to the public, for the use of schools. In this all the children could see a series of selected objects brought together to illustrate the subject for which the visit was undertaken.

In the Smithsonian National Museum at Washington there is a children's room which fulfils these requirements, and is, moreover, arranged with exhibits suited to the young. Nowadays, as I have explained elsewhere, museums undertake to prepare special exhibits for the different classes of visitors, so that the task of a school instructor is greatly facilitated.

The Need of Expert Instruction to Teachers and Lectures for Children.—A very great drawback to the teaching of Nature-study in the schools is the lack of knowledge in the subject evinced by the teachers. Since it is not an obligatory subject, but an *extra*, or alternative, it is no discredit to the hard-worked teacher that he or she knows next to nothing about it. It would be unreasonable to expect anything else. But it is now so well recognized by the teachers that Nature-study helps their other work, being an incomparable educer, that they are beginning to take it up more energetically than ever before. Hence many of them are self-instructed already. But a far larger number wish to become proficient in it, though time or other difficulties prevent them.

It is therefore essential, as they have themselves admitted, that they should receive instruction in the subject by competent teachers. Lectures upon the subjects which Nature-study (*i.e.* natural history) includes have in fact been given to teachers with success. As a rule, they necessarily deal primarily with the material in the museum illustrating the syllabus, but cover generally the branches of natural history (*i.e.* geology and biology). Where training institutions for the teaching of natural science exist in any centre, teachers should be recommended to attend courses of lectures in Nature study. Where they do not, the staff of a properly organized museum may be entrusted with this duty.

Then comes the desirability of lectures to the children themselves. Whilst the school teachers should and can teach all the elements of Nature study, the more intimate knowledge of the habits and characteristics of any group of plants or animals is better conveyed to the child's mind by an expert; and here again a museum staff may be regarded as the most capable exponents of this more difficult branch of Nature-study. At Leeds and elsewhere lectures to children have been given regularly on a systematic plan.

The principle of docentry—or guiding visitors around the collections of a museum and explaining their interest and meaning—comes, again, to us from America. It has been adopted by the British Museum and is now general in this country. It may be employed perhaps most effectively in the case of children. A museum staff may to a limited extent lay itself out to undertake this work of informal explanations of exhibits to the children.

The Inevitable Need for a National Movement for the Better Recognition of Nature Study.—(a) *For the Official Recognition of Nature Study.*—Nature study, which grew out of the old "object lesson," has been more or less studied in the schools for thirty years. Though it is included in the Code, it is not officially recognized as a necessary and important part of the curriculum. The other subjects come first, and must be taught. Nature-study may, but need not, be taught. In this position it has no facilities nor basis of encouragement. If it is to be taught properly it must be officially recognized and made compulsory, and teachers must qualify in a knowledge of it and the power to instruct in it. Until this is done, the present difficulties will largely continue.

(b) *Universal Instruction in Nature-study and the Training of Teachers.*—The present lack of knowledge of the subject and absence of training colleges or courses of study in Nature-study are a sign of the want of interest the State shows as to whether or not Nature-study is taught. If, however, the value of this subject as a method in training the perceptive faculties is once admitted, the need for teaching it effectively will be grasped at once. But, until some sort of public opinion upon the matter is created, the present state of affairs will go on. Enthusiasm in one centre for reform must be communicated to others, so that gradually every town and city will call for better conditions.

The Recognition of the Place of the School in the System of Education is the only means of securing these ends.—Hitherto a school has been considered as a separate institution, existing as an end in itself. That is to say, a child has been supposed to be efficiently educated for its life struggle at school, without any outside assistance. Similarly, museums, art schools, and all those organizations which exist for the diffusion of knowledge, have been regarded as an end

in themselves, self-contained, and unconnected with any other institution. The only approach to any sort of co-operation has been between the school and the University, but this has rather applied, especially in the past, to a certain grade of society well enough off to afford the training of both. But ideally, as I have recently said (*Westminster Review*, September 1912), all such institutions are but part and parcel of a single system of education, and each is but an integral part of the whole scheme. They are dependent upon each other, and not disconnected.

When this principle is realized, the proper relation of the school and the museum will be recognized, and only then will Nature-study be efficiently taught. The new principles I have formulated and with which the encouragement of Nature-study is intimately connected may be summarized in the following premises. Ideally education embraces all institutions capable of training any faculty of the mind—e.g. a technical institute, an agricultural college, &c. Hence for Nature-study teaching, the special institution schools should utilize for its illustration is the museum. As a corollary of the last, seeing that the elements of education are imparted in the school, it is necessary that there should be more attention given to the special faculty of each pupil, to decide to which other finishing institution he or she should be sent.

REVIEWS AND MINOR NOTICES.

The Development of English Theology in the Nineteenth Century. By VERNON F. STORR, M.A. (12s. 6d. net. Longmans.)

The existence of a God, which is postulated by the term "Theology," is the most important of all facts, and its application to human life is the most important of all practical considerations. The history of theology is the history of the attempt which has been made throughout the ages to found a philosophy and a practice upon these two factors of life, speculative and practical. The practical question *solvitur ambulando* by Christians of every sect, unless we are to accept the despairing conclusion that there is no solution but in Rome, and that the rest of Christendom lieth in wickedness: the philosophical question eludes human inquiry, but never ceases to fascinate, whether we call it Theology or Philosophy; for, whatever practical men may say, they do not deny its importance, though they may think it insoluble.

Canon Storr's treatise on "The Development of English Theology in the Nineteenth Century," of which the first volume has recently been published, dealing with the period from 1800 to 1860, bears too comprehensive a title; for it takes little account of theology in Scotland or Ireland, which cannot be dissociated from English theology, or among the Non-conformist bodies, but is mainly occupied with Anglican writings; but within this limit it is complete and full of instruction and interest. The principal subject of the treatise is, as it could not fail to be, the rise of Biblical criticism, and the action upon theology of that "universal solvent," as Newman called it.

Development is the problem of our age, in religion, science, politics, economics. "It is the pivot on which turns the Modernist movement in the Church of Rome. . . The publication of 'The Origin of Species' made the category of development dominant in the mind of the century" (page 23).

Canon Storr points out how the nineteenth century entered upon a wider range of reading than the seventeenth century, which would not go far beyond the Fathers or the Reformers, or the eighteenth century, much concerned with abstract "unhistorical" reasoning, or with the problems of spiritual religion as they presented themselves to the Methodists and their contemporaries and successors of the Evangelical school. The controversies known as Trinitarian, Deistic, Bangorian, and Subscription, conceived of Reason and Revelation as kingdoms, the frontiers of which were already defined, and did not foresee the incursion of science through the methods of

historical criticism, into the region marked off as belonging to religion.

The history of theology in the nineteenth century may be summed up under two heads: on the one hand, the advance and extension of research into Biblical and ecclesiastical origins according to old and new canons of inquiry; and, on the other, the reversion to Romanizing doctrine on the part of a large and distinguished section of the Church of England, the Oxford movement with all its consequences. Side by side with these movements, and affecting them externally, were proceeding on the one side the disintegration of theology by German research, and the growth of Ultramontane doctrine, culminating in the Papacy of Pius IX.

The weak side of Evangelicalism was want of learning. "The Evangelicals had no philosophy of history or religion." Christ's message was looked upon rather as "a sudden interposition of God to save a world from ruin than as the culmination of an age-long process" (page 71), the last term of a series of continuous revelations from the beginning. The Evangelical leaders did not lay claim to erudition; their business was with the soul, not the mind. They were accused of "enthusiasm," i.e. emotional fanaticism. A religion of which the mainspring was personal emotion, and which took little account of history, laid itself open to the charge brought against it by the pioneers of the High Church movement—Sikes, Jones, Jebb, Joshua Watson, and his friends, and especially Alexander Knox, of "uncatechized" doctrine and neglect of Catholicity.

Oxford became the focus of controversy. The "Noetics" of Oriel—Copleston, Hawkins, Whately, and Hampden—pre-figured the Broad Church of the next generation, the Tractarians the Romanizers of the present day. The two tendencies are personified in Arnold and Newman, the one directed by the historical method (as ably set forth in Chapter VII), the other based on authority, but condemned by the "logic of facts" to be for ever examining the ground of authority. From one point of view it may appear that dogma is now winning the day, both at Rome and elsewhere; from the other, the rise of modernism beginning with the "Old Catholic" movement, and the growth of historical inquiry in England, taking its rise with Milman and Thirlwall and proceeding through Stanley, Lightfoot, Westcott, and their circle, open a wide prospect: for theology has to reckon not only with historical but with scientific criticism, and the vista opened by Galileo has never been closed.

Canon Storr (page 131) points out the relations, sympathetic and antagonistic, of Romanticism and Tractarianism. "Religion was proved to be natural" to man, not an invention of priestcraft. He deals shortly but conclusively with the claims of physical science, showing that in its own region its authority is final; but that the doctrine of divine immanence, condemned by Rome, contains a hope of reconciliation. Such an expression as "immanent purpose" like *natura naturans* (page 125), *évolution créatrice*, and other formulæ may be metaphysical and unscientific, and yet indicate the direction in which science is proceeding. Meanwhile, each generation, century, school, country magnifies the importance of its own point of view, and our author does not altogether escape the tendency of the age to make historical development an idol, and to view everything in its light.

Canon Storr's analysis of Newman's position is lucid and fair. Newman's theory of development was invented to account for the facts as he saw them. Like Ruskin, he created his own canons of criticism. His seven tests or "notes" of a true development are arbitrary; and a skilful logician could apply them to suit the history of Protestant creeds. To use Newman's own figure, he saw the steeple of the church soon after he began his walk, and knew whither he was tending. Without consciously allowing it, he argued from the conviction that "Rome will be found right after all," and the wings of his inquiry were limed by the responsibility of

* The romantic temper, with its sense of mystery, lent itself naturally to sacramentalism in theology. The growth of ritualism in the Church of England was certainly in part an outcome of the romantic love of colour, movement, pageantry.

thinking right in so grave a crisis. In his mind reason must bow to faith; the search for truth only came in the second place.

Among the most interesting chapters of the book are those on Schleiermacher, the founder of modern theology, who announced that religion, the sense of dependence upon and redemption by a higher power through Christ, is a universal factor of life and independent of dogma; and on Coleridge, "the intellectual father of the philosophical movement which was continued by Julius Hare and Maurice, and one of the 'seminal' minds of the century."

Coleridge, "not a completely consistent thinker," and "hopelessly unsystematic" as a writer, had a prophet's insight and a prophet's "occasionalism and informality." In these respects he resembles Kant, Hegel, and Plato. Like them, he saw the vastness of truth, the gleam of the "untravelling world," whose margin ever receded as they approached it. Man's mind must always be growing; and where there is growth there can be no finality.

Want of space prevents us attempting to do more than direct attention to these chapters and to those which treat of Biblical criticism in Germany and in England and of the negative movement, whether directed against all intrusion of the miraculous into the field of religion—as in the instances of Strauss, Baur, Feuerbach, and, in England, Mill, Lewes, Hennell, and Greg—or against the current view of inspiration, but not entirely denying all authority to the Scriptures, especially the New Testament.

Canon Storr writes as a Broad Churchman; that is, he represents an indeterminate doctrine, negative in method, conservative and hopeful in temper—the only possible position for a religious inquirer who accepts the established conclusions of science past and prospective. Religious philosophy must occupy the middle region between the dogmatism of science and the dogmatism of creeds.

The difference between the Broad Churchman of 1860, the period of "Essays and Reviews," and the Broad Churchman of the present day is thus summed up: "The modern Broad Churchman has a keener historical sense . . . he has learnt that a core of solid fact lies at the heart of each dogma of his religion." In the second place the Person of Christ is more prominently the central figure in his system. This is indeed the salient fact in the controversy of the age, and more and more as the figure of Christ is cleared from the mists of mythology the question "What think ye of Christ?" grows in importance.

Canon Storr's work is important, both historically and philosophically. He has mastered his subject, and dealt with it comprehensively and methodically, and with just appreciation of the intellect and character of the persons who come in review; for such a work as this must be partly biographical. We look forward with great interest to the appearance of the second volume.

Moral Instruction: its Theory and Practice. By F. J. GOULD. (2s. 6d. Longmans.)

Those who are under the impression that moral instruction is conducive to "priggishness" or hypocrisy will find here a complete exposition to the contrary, for a sane, healthy view of life, character, progress, and service is the basis of what Mr. Gould has to say on the subject, of which he is the greatest authority. His experience adds weight to his words, for in the preface we learn that he has taught in schools for twenty-five years, has been member of a School Board and a Town Council, and has conducted classes in psychology, history, economics, &c. He helped to found the Moral Education League, and has given demonstration lessons in England, Scotland, Wales, and Ireland, in various towns of Bombay, and at present is engaged in a seven-months' tour of the United States.

Moral education is defined as "such a training in the service of the larger life as involves personal hygiene, self-development and character building," and farther on the remark occurs, "The training of the entire soul is the object of moral education." Thus the teacher is urged, "by all pos-

sible channels . . . to keep in communication with the great world outside. His interest in the social order and progress, in local and national institutions, in the political development of his country, in the general economic betterment, should be of the active and personal character which renders him, in the finest sense, a citizen of the world."

The author thinks that there should be closer relation between the school and the home, and that the half-forgotten mother-power should be more utilized, as the mother's influence is the most potent of all. A school, he says, cannot be efficient unless it is definitely related to life and life's activities, and life's ideals. On the question of character Mr. Gould has a section of great value, as giving a conception of that term which clarifies the usual vagueness.

Character, in the precise sense, is the result of the combined action of the whole of the instincts, feelings, and thoughts expressing themselves statically in habits or dynamically in more or less creative acts of the will. The keyword in this statement is *result*. Feelings and ideas, propensities and imaginations are the springs of character. . . . Hence it follows we cannot act directly upon character. . . . We achieve nothing by exhorting youth to courage, caution, and resolution as things in themselves. . . . But increase in power depends on the deepening of feeling, the broadening of imagination, the exercise of the reason—in a word, the strengthening of motive, and here is the moral educator's sphere and duty. Given the eager and vivid motive, character will fast enough take the right form and pressure under the hands of the wise educator. . . . The practical maxim of moral education therefore becomes, *Act from affection and think in order to act.*

The necessity of direct, definite, and constructive moral education is insisted upon, and annotated specimen lessons are given in Part II which illustrate the method adopted and the sense of artistic building-up which the child must feel. In these lessons the wholesome touch of humour is present, and the "moral" is never laboured, nor does the lesson end with it.

Education should be synthetic, and to focus attention on that aim Mr. Gould has drawn up a correlation scheme in three stages, which deals in each stage with the Environment, Social and Political Action, Thought and Expression, and Ethics. Under these various headings a mass of material from which teachers may select is arranged. The scheme and its explanation deserve careful study, as do other schemes for training colleges, &c., and the enumeration of sources of material. The work in general is ahead of its time, but we believe that demand for it will increase as years go on, for it is based on long experience, impartial judgment, and a synthetic philosophy of education.

The Making of London. By Sir LAWRENCE GOMME. (3s. 6d. net. Clarendon Press.)

A love for London breathes through this book as it sketches the beginnings of the great city and describes the great Londoners who have helped in its making. From palæolithic and neolithic times Sir Lawrence Gomme leads the reader through Roman, Danish, and Saxon periods to the present century, tracing the growth and sketching the probable aspect of the city at each respective inroad or time. He has various theories which the usual history book does not make clear, and some of which are opposed to those of Freeman.

It is particularly important to understand that the social organization of the Celts, both at the time when they met the Roman armies in Britain and after the Romans had left Britain, was tribal in form, not national. It disposes of the various theories which have been built up of there being a great London city before the Romans came there . . . which is the creation of twelfth century chroniclers who translated Roman remains into evidence of Celtic history.

The charters, also, which the ordinary textbook treats as grants of freedom and privileges to towns, are regarded rather as documents setting forth the will of the king, but not changing citizen life or government. They were of more value to the king than to the city, and the Tower of London was not a protection for the city, but a menace against it.

The City of London was the citizen's city; the Tower was the King's outside the city area. The City of London was governed by

its own institutions; the Tower represented the sovereign government of the State. And these two institutions were always in contrast, always at feud, always claiming and defending rights and privileges, the City against the Tower.

The author pleads for a greater knowledge of the city, which has "a story of great beginnings, great mishaps, great struggles, but withal a glorious story. It is the living history of an institution. . . ." And he believes that "city life is the true method of civilization":—

And when once it is understood how great the story of it is, how London alone of all British cities is the capital city without a rival for its place—a capital city not because of formal appointment thereto, but because of the great position it has occupied in the country for nearly nineteen centuries, as Roman city, city-state, as municipal city, as national city, as empire city; then its sons and daughters will see to it that they, in their pride of it, will give all the tribute that is due.

The book is well illustrated, and could be made suitable for pupils in their teens as well as older students.

Education for Social Efficiency. By IRVING KING, Ph.D. (6s. net. Appleton.)

Why do Professors of Education not contrive some system of division of labour among themselves? Every one of them seems to think it necessary in due time to produce his tome covering the whole range of educational theory and practice in the same dismal way and without anything very new to contribute. If each would only concentrate on some point, and really work it out, their labours would be far more useful and productive. However, Dr. King's volume is an improvement on many of these products, especially the American sort, in some respects. Though discursive, it is of reasonable compass, and deals with concrete problems; moreover, it is written in tolerably grammatical English, which cannot be said of all the works of his compatriots. It is, perhaps, unfortunate that he should introduce that cant term "efficiency" into his title without defining exactly what it means; for, as Mr. Chesterton points out, it all depends on what we want to effect, and it is more important to have a right social ideal than to know the way to attain to some end or other, whether rightly or wrongly conceived. However, it is possible to gather in sundry parts and in divers manners what ideal the author has in view. Dr. King deals with rural schools, home life, the social value of play, school government, and the vocational interest. He also has some interesting comments on the method of instruction, and outlines some suggestions for reform on the principles of self-realization. Perhaps the most interesting portion is that which deals with the "Parent-teacher Associations." These have come into being in order to promote intercourse and encourage acquaintance between parents and teachers. They have been useful not only in getting parents to understand and sympathize with the aims of the teachers, but in promoting various municipal undertakings which have tended to the welfare of the children. In concluding, we must protest against one tiresome allusion, whose falseness has now been fairly exposed in England, with the consequence that it seems to have emigrated to America. "We recall that when the Duke of Wellington was asked to explain his victory at Waterloo, he replied that it had been won years before on the playgrounds [*sic*] of Eton." "Learn to play the game" is the moral which our author deduces; but "Learn to fight the fight" is what Wellington meant, for the victory referred to was won, not on the cricket field with admiring ladies for spectators, but "behind the wall," with fisticuffs and seconds, secretly at the hour of dawn.

Stoics and Sceptics. By EDWYN BEVAN. (4s. 6d. net. Clarendon Press.)

These are four lectures which were delivered in Oxford for the Common University Fund. The author intends them to be "rather an impressionist sketch than a photograph." Often, however, the "impressionist sketch" give us a more adequate idea of our subject than the more detailed and laborious photographic method, and this may be said to be the case in the present instance. Mr. Bevan begins by giving us a com-

parison between St. Paul's sermon at Athens and the coming into that same society of the Cyprian Zeno with a not dissimilar message three centuries before. The likeness is partly intentional, but there is a Semitic character common to the apostle of Tarsus and the sage of Citium. Perhaps the most interesting lecture is that on the sceptics, presenting as they do so close an analogy to the modern Agnostics. Mr. Bevan sets over against this obvious likeness a radical difference of motive. "Agnosticism often goes with a vigorous interest in science." Scepticism "was the expression of weariness, of disgust with the endless strife of tongues, of the relief found in mere ceasing from effort and stagnation." For this reason the older scepticism was less suicidal than the new. Its professors were indeed obliged to reply to the accusation that they themselves held one initial dogma, viz. that reality was unknowable, by professing a doubt in their own dogma; but that was of less account to men who needed an excuse for refusing to inquire than for those who were anxious to set up a monopoly of reality for one particular kind of knowledge. Mr. Bevan holds that the Christian dogmatist was as much open to the attack of the sceptic as was the Stoic dogmatist. Both should have refrained from trying to represent the certainty, which they felt, to be of the nature of a logical certainty. All who are interested in these later (and certainly not the least important) Greek philosophers should read Mr. Bevan's lectures. Dr. Schiller has recently stated (in the *Hibbert Journal* for January 1914) that Plato and Aristotle represented a reaction to what was most typical in Greek life. The Stoics and sceptics represented a reaction to Plato and Aristotle on the one hand and to Graeco-Roman life on the other. All these movements answered to spiritual needs or the failure to fulfil them, and in this way throw a light on social history no less than on the history of thought.

Where Education Fails. By PRESTON WEIR. (1s. Ralph, Holland.)

There is a reactionary tendency in Mr. Weir's outlook, since he praises the olden "payment by results" system, and seems to advocate drudgery for its own sake. But his intention is good, and some of his points are worth considering by the average teacher. However, some misstatements appear. "It is not the least exaggeration to say that at the present time the Inspectors, inspired, of course, from 'above,' deliberately discourage anything like painstaking accuracy." Few teachers would corroborate the above, and the remark about students from secondary schools who teach in elementary schools is false when it asserts that they "will never be anything but foreigners among the children." A plea is made for the average boy, who is neglected for the sake of the distinguished scholar, and a dismal picture is drawn of him in the present day. "His interest is not keen on anything; his laugh is not hearty; the bright side of things hardly appeals to him; he is amused with difficulty. He is not serious; he is simply dreary. Is not this an inevitable result of his present school environment?" If this is so, and we doubt it, we scarcely think Mr. Weir's suggestions will improve matters. We agree that there is a scarcity of people with any power of initiative, but punishment will not create that power, nor will rigid individual examination. Education will progress, and gradually discover the right and hopeful methods, but a less superficial treatment of the subject and a more sympathetic view than the one here expressed will go farther on the road.

Woman's Place in Rural Economy. By P. DE VUYST. Translated by NORA HUNTER. (3s. 6d. net. Blackie.)

It is a sign of the increasing recognition of the importance of womanhood in sociological problems when the Director-General of Agriculture in Belgium writes a book of this kind, and the Chairman of the Board of Agriculture for Scotland (Sir R. P. Wright) gives an introduction. The latter says: "It should be considered that the happiness, efficiency, and success of neither man's nor woman's life can depend on the perfect knowledge of any technical art. It is an excellent and useful thing to be a first-class maker of cheese, but the maker of cheese is likely to be more successful in that art, and will form a much more useful and capable member of the community, if the training in the technical art has been superimposed on a wider knowledge and a more generally cultivated intelligence." The treatise sketches the varied influence of the farmer's wife as it might be in the house, family, farm, and associations; and her social rôle is considered of the greatest importance, especially in the matter of checking rural depopulation. Accounts are given of

the professional training of the farmer's wife in Britain and various countries on the continent; in France the syllabus of instruction in some primary schools is very comprehensive. In Canada, the United States, and Poland an excellent organization exists in the Women's Institutes, composed of farmer's wives, in which questions of importance to dwellers in country districts are discussed, and the range is a wide one, as a glance at the programs will show: starting from "Yeast," one of them ranges through twenty subjects to "Books."

But it is in the experience of Belgium that the author is most interested; and here the agricultural training for girls has reached a fairly good standard, but is not yet satisfactory, as only a comparatively small sum is devoted to the purpose by the government. Public courses of lectures for farmers' wives have been instituted, and an experiment made by establishing Teachers' Study Circles to enable the teaching staff to keep in touch with all the newest processes and developments in other countries, and to study general questions of domestic economy, hygiene, education, gardening, care of animals, &c. The number of Unions of Farmers' Wives is increasing, and they now possess a National Committee. Various suggestions for the formation of associations take up one chapter, but the hints for lecturers strike us as being rather elementary. A very good bibliography in the French, German, Flemish, and Dutch languages, as well as English, ends the book. It is worth study as indicating a sphere of life and labour that is too little known: and to all rural teachers the study would be of much profit.

The Relations of Education to Citizenship. By S. E. BALDWIN.
(6s. Frowde.)

A series of addresses given at Yale University are here issued, which advocate the conscious and serious acceptance and practice of personal service to the State as a voter and a citizen. The advantages and power possessed by the educated for this purpose are emphasized. The lectures are discursive and not always interesting; but good points are made throughout. We select one: "The weak point of our . . . system of education seems to me in giving, in the earlier school years, too little information about necessary things, and perhaps, in the later school years, too much information about unnecessary things." And an insight not general is shown in the remark that "the ordinary man has a poor sense of proportion. He is too apt to be an extremist without knowing it."

The Everyman Encyclopædia. Edited by ANDREW BOYLE.
(12 vols. 12s. net. Dent.)

The old year saw the completion of this truly popular work of reference and every man a globe of knowledge, to use Bacon's phrase, for less than he is charged for the current issue of *Who's Who*, or, to reckon by words, matter that would occupy fifty average six-shilling novels. In previous notices we have sufficiently indicated the objects and plan of the work. Every encyclopædist and lexicographer must necessarily build on the foundation laid by his predecessors, and Mr. Andrew Boyle would be the first to own his obligation to the last edition of the "Encyclopædia Britannica," just as every future English dictionary will inevitably be indebted to Sir James Murray. In criticizing the article "Education" we noted some omissions, and these have not been made good in the subsequent volumes. We still lack a definition of "Public school," and for "Secondary" we are referred back to "Education." "Teachers' Registration," our King Charles's head, is missing. Under "Co-education" Miss Wood should be Miss Woods, and Cecil Grant's monograph is equally worthy of mention. Quick's Christian name was Hebert, not Herbert. Recent movements and heresies—Eugenics, Pragmatism, Syndicalism, Women's Suffrage, down to the "Cat and Mouse" Act—are duly recorded; but in education we miss Eurhythmics, Heuristic, Formal Training, the New or Reformed Method, Spelling Reform. It is strange to read of C. S. Calverley as "best known for his examination paper on Pickwick." Two famous epigrams record that at Harrow and Balliol he was known as "Blays," and his translations into English deserved a line. Nor should we describe J. K. Stephen (eldest, not second, son of the judge) as a "poet." But, like Scholasticus, we are judging a house by a specimen brick and examining the brick from a microscope.

French Idioms and Proverbs. By DE V. PAYEN-PAYNE.
Sixth Revised Enlarged Edition. (D. Nutt.)

We welcome a sixth edition of this collection, which we would commend to pressmen among others. We happened, as we were writing, to glance at the *Westminster Gazette* and found on the first page *recueillir à mieux sauter*. A double entendre and *en d'shabille* may possibly claim the right of naturalization, but the same claim cannot be allowed for *toujours perdrix, hors d'œuvres, nom de plume*. In the model French translations of *Everyman* we have twice found *hommes de bien* rendered "rich men." In the last edition several misprints have been corrected,

and Mr. Payen-Payne has found what we have long sought in vain—an equivalent for "a white elephant." *Béla's* *eis* *deur* still needs correcting, and *Addendum parvo* is probably the monkish form of the proverb—*parvum* cannot be right. Among books of reference, Billandeau's "Recueil de Locutions Françaises" well deserves mention.

Lectures Illustrées. Par E. MAGEE et M. ANCEAU.
(1s 6d. Black.)

A capital reader for beginners in the second term. The Lectures consist of simple descriptions of scenes and incidents in the life of a French child, anecdotes and nursery poems. Grammar questions follow each lesson, impressing the accidence. The full-page illustrations are not, as is usual in Reformed Method publications, mere blackboard sketches, but attractive pictures.

English Literature for Schools. Edited by ARTHUR BURRELL.
First twenty volumes issued in 1913. (6d. each. Dent.)

This series of Readers, to be completed in fifty volumes, aims at furnishing a library of school books of high literary merit, which will at the same time commend themselves to boys and girls and attract their attention. It is designed also when complete to provide materials for a study of comparative literature. Thus Greek, Latin, and English chronicles will illustrate one another. In the matter of paper, type, binding, and of price, the publishers have worthily collaborated with the editor. Half of the first batch are poetry, and the choice commends itself. Morris's "Life and Death of Jason" and "Selections from Hood" are comparatively new ground. The two volumes of Chaucer raise the question of notes. The text is followed fairly closely, but there are omissions, and hard words have been paraphrased. We should much have preferred a glossary or notes at the bottom of the page. "Pricasour" becomes "horsemen," but "prickying," a few lines further on, is left. "Rote" is changed to "flute" at the expense of the rime, "limitour" to "preachour," and sometimes the alteration necessitates an interpolated line—"His store of wine was known in special." Yet to have the "Canterbury Tales" in a form so near to Chaucer, and one that boys can read for themselves with a little practice, is a boon. "Greece and Rome in the English Poets" covers more familiar ground. Macanlay naturally is to the fore, and next to him Byron. Mrs. Browning's "The Dead Pan" does not seem to us suitable for a school anthology. "Difficult, but full of music," is the editor's justification, but the half rim—*iron* with *inspiring*, *islands* with *silence*—will strike the ears discords, and the envoi proclaiming that Christian poetry has eclipsed all the muses of Greece and Rome is not the moral that the volume seeks to enforce. In its stead we should have liked to see some of Keats and Cory and Wordsworth's "In that fair clime."

The prose volumes, which include selections from Borrow, Parkman's Conspiracy of Pontiac and Caxton's version of Reynard the Fox, are even more original than the poetry. We confess that the apology for the last strikes us as a piece of special pleading. If a justification was needed at all it would have been better to reproduce A. J. Froude's famous essay. The defects we have pointed out do not seriously detract from the striking qualities of the editor's work, and we hope that the series will be as widely used as it deserves to be.

A Biblical History for Schools (New Testament). By F. J. FOAKES-JACKSON, D.D., and B. T. DEAN SMITH, M.A.
(3s. 6d. net. Cambridge: Heffer.)

"This volume is an attempt to place before beginners a compendious account of the New Testament, its contents, history, and environment." To write such a book must have been by no means an easy task. The present attempt may be said, on the whole, to have achieved a considerable measure of success. The plan of the authors is as follows. The first three chapters are introductory, dealing with the New Testament generally—its contents, manuscripts, and versions—(Chapter I); Palestine between B.C. 5 and A.D. 37 (Chapter II); and a sketch of the early history of Christ from the birth to the beginning of the Galilean Ministry (Chapter III). Chapters IV to X deal with the Ministry of Christ as depicted in the Gospels, and include separate discussions of the last week in Jerusalem, the Crucifixion, Resurrection, and Ascension. In Chapters XI to XV the history embodied in the Acts is carried down to St. Paul's second journey; then follow discussions of the Epistles to the Thessalonians (Chapter XVI), St. Paul's third journey, his arrest, and trial (Chapter XVII), the Epistles of the third journey (Chapter XVIII), the journey to Rome, and later years of St. Paul (Chapter XIX), and a chapter on the later Epistles of St. Paul (Chapter XX). Finally, the Epistle to the Hebrews (regarded as of uncertain authorship), the Catholic Epistles, and the Apocalypse of St. John are discussed (Chapters XXI to XXIII). Here the case against the Petrine authorship of

(Continued on page 108.)

A NEW "IDOLA" SERIES

IDOLA LINGUARUM

THE JOURNAL OF EDUCATION will publish during 1914

A SERIES OF ARTICLES ON LANGUAGE TEACHING

 The Introductory Article, by Professor JOHN ADAMS, will be found on another page.

The following subjects will be treated in the course of the year:—

- | | |
|---|---|
| <ol style="list-style-type: none"> 1. ENGLISH GRAMMAR. By Professor ADAMSON. 2. ENGLISH LITERATURE AND LANGUAGE. By Miss LILIAN FAITHFULL. 3. ENGLISH COMPOSITION. 4. GREEK. By Professor GILBERT MURRAY. 5. LATIN. By Professor CAMPAGNAC. | <ol style="list-style-type: none"> 6. THE REFORMED METHOD: For. 7. THE REFORMED METHOD: Against. 8. FRENCH. By CLOUDESLEY BRERETON. 9. GERMAN. 10. MODERN LANGUAGES v. CLASSICS. By THE EDITOR. |
|---|---|

NOTE.—The Fifteen Numbers containing the previous series (IDOLA PULPITORUM) can still be obtained, price 23s. the set

2 Peter is cautiously put, and the Apocalypse is regarded as the work of a Christian prophet of Asia Minor, by name John (not the Apostle). This chapter (on the Apocalypse) is an admirable piece of work. The whole is written in a clear and interesting way, and ought to prove invaluable for the work of higher forms, and, indeed, as an excellent introduction for private study to begin with. The authors are to be congratulated on having produced an Introduction to the New Testament which is suitable for school use. We can recall no volume exactly like it. It certainly deserves a successful career, and will, we trust, be the means of stimulating an intelligent interest in the New Testament literature, as a whole, in circles to which ordinary New Testament Introductions would not be likely to gain access. The volume is handy and compact in form and well printed. There are some excellent maps (including a plan of Herod's Temple), and an Index of Greek words, which are occasionally cited, but in such a way as not to interfere with the progress of readers who do not understand Greek.

The Epistle to the Romans. Edited by R. ST. JOHN PARRY, B.D. With Introduction and Notes. (3s. 6d. net. Cambridge University Press.)

This is a volume of the Cambridge Greek Testament for Schools and Colleges, to which it is an important addition. The Introduction includes interesting sections on imperialism as a possible factor in St. Paul's intellectual development, on the History of the Roman Church, on the Pauline doctrine of justification, as well as on the ordinary topics. The notes are careful, scholarly, and thorough, and there are at the end some useful detached notes on important points.

On the Foundation and Technic of Arithmetic. By G. B. HALSTEAD. (4s. net. Chicago: Open Court Publishing Company.)

The mature teacher will find this book helpful, because he will be able to use it with discrimination, and also to thread his way through a somewhat meandering discourse. For example, much of Chapters XIII and XVII should come with Chapter III, and then the distinction between mere succession and group-imagination would be far clearer. The historical part of the work is suitable and interesting, and the pure psychology of early number is sound. Methods are not altogether satisfactory, nor are they treated of in sufficient detail to be of much value. There is a serious blunder in subtraction, where the complementary method is to be used, and yet the "carrying" is to be explained by the theory of equal additions.

Practical Mathematics. By NORMAN M'LACHLAN. (2s. 6d. Longmans.)

As a collection of elementary examples in practical mathematics, to be worked under the guidance of a teacher, this piece of work has considerable merit, but it is spoilt by the remarks leading up to each set of exercises, which seem to indicate that the examples are to be worked by unconnected rules of thumb. This criticism applies especially to Chapter IX, a chapter which the author definitely regards as of fundamental importance.

"Lands and their Stories."—Book VII: *Asia, Africa, and America* (outside the British Empire). By H. W. PALMER. (1s. 9d. Blackie.)

This concluding volume of the series with its coloured plates and endless woodcuts and other illustrations is a marvel of cheapness. Our only quarrel with it as teachers is that the joint comes at the end of the entertainment, and the pupil who has feasted on the choice morsels from books of travel and racy pictures of the Jap and John Chinaman will have little stomach for the solid physical geography with maps of mountain ranges, rainfall and temperature which is served up as an Appendix. Of course, the wise teacher will combine the grave and gay, but we should have preferred to see them presented in combination.

Britain and her Neighbours. Book III: *The Beginnings*, 55 B.C.—1066 A.D. (1s. 3d. Blackie.)

Children in our elementary schools might still be described, in the language of Virgil, as "penitus toto divisos orbe Britannos," and this series is designed as a frame to English history, to show how little they know of England who only England know. The present volume will give a child some notion of Julius Caesar, Augustus, Constantine, Alaric, Attila, Gregory the Great, Mohammed, and Charlemagne, hitherto mere names to him, if he has ever heard of them. The stories are sketched in broad bold outlines, but there is nothing a child cannot understand, and they will leave him, if he has any bent for history, with an appetite for more. The woodcuts of historical objects, &c., are well chosen. The reproduction of famous pictures leave something to be desired in the colours.

▲ *Wanderer in Florence.* By L. V. Lucas. (6s. Methuen.)
"Lucus a non lucendo"; no less true,
Look as looks Lucas, foreign towns to view.

BLACK'S NEW TEXT BOOKS

IN FRENCH - HISTORY - SCIENCE - GEOGRAPHY.

Edited by **F. B. KIRKMAN, B.A.**

SOIRÉES CHEZ LES PASCAL

Illustrated with 5 Full-page Illustrations IN COLOUR.
Price 6d.

The members of the PASCAL FAMILY will be familiar to the many readers of the "PREMIÈRE ANNÉE DE FRANÇAIS." The present book provides a first step towards the creation of an interest in the reading of French books as an end in itself.

Edited by **E. MAGEE** and **M. ANCEAU.**

LECTURES ILLUSTRÉES

(ÉLÉMENTS DE GRAMMAIRE.)

Containing 38 Illustrations, of which 32 are IN COLOUR.

Crown 4to. Price 1s. 6d. Bound in cloth.

"LECTURES ILLUSTRÉES" is intended for children who have already studied a simpler textbook on Direct Method lines, but, to obviate the difficulty of its possible use by beginners, the grammatical exercises have been arranged in the form of revision of the lessons, simply and comprehensively.

RÉCITS ET COMPOSITIONS D'APRÈS L'IMAGE

Containing 14 Full-page Illustrations IN COLOUR, with corresponding Text and Exercises.

Demy 8vo. Price 6d. Limp Cloth.

The title of this little book describes its twofold aim, i.e., that of a Reader, and an Introduction to Free Composition in French. It is intended for the use of pupils who have learned according to the Direct Method, and who have an elementary knowledge of grammar.

By **E. L. HOSKYN, B.A.**

MORE PICTURES OF BRITISH HISTORY

Containing 60 Illustrations, of which 32 are IN COLOUR.

Crown 4to. Price 1s. 6d. Bound in Cloth.

This is a series of stories arranged so as to follow after "PICTURES OF BRITISH HISTORY." The same methods have been followed in both books, but whereas the first deals mainly with men of action, the new one treats chiefly of those whose thoughts and ideals have made history.

By **Mrs. JESSIE WHITE, D.Sc.**

A FIRST BOOK OF EXPERIMENTAL SCIENCE FOR GIRLS

Small Crown 8vo, cloth, containing 11 Figures in the Text and Two Sets of Ground Plans.

Price 1s. 6d.

This book supplies to the pupils a great deal of information which they cannot derive from their own experiments. It also states in a clear way what the pupils will learn from their experiments.

All the subjects taken are viewed in relation to the "House." It starts with "Plan-Drawing," "The Soil on which the House stands," and "The Aspect of the House." It deals with thermometers, the barometer, and the physics of heating a house.

By **Prof. L. W. LYDE, M.A.**

SCHOOL GEOGRAPHY OF THE WORLD

Price 3s. 6d.

More than ordinary interest attaches to this new edition of Prof. L. W. Lyde's "Geography of the World." A feature of the new edition is the problems and exercises illustrated by diagrammatic maps. These have been inserted in response to the wishes of the numerous teachers who are using the book.

Published by **ADAM & CHARLES BLACK, 4, 5, & 6 Soho Square, London, W.**

Arithmetic, Preliminary. By A. BARRACLOUGH,
M.A. 1s. 6d. With Answers, 1s. 9d.

Biology, Plant. By F. CAVERS, D.Sc., F.L.S. 3s. 6d.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc.
Second Edition. 2s. 6d.

Chemistry, Junior Practical. By H. W. BAUSOR,
M.A. 1s.

Chemistry, Preliminary. By H. W. BAUSOR,
M.A. 1s. 6d.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc.
2s. 6d.

Heat, Junior. By J. SATTERLY, D.Sc., M.A. 2s.

Hygiene, First Stage. By R. A. LYSTER, M.D.,
B.Sc., D.P.H. 2s. 6d.

Magnetism and Electricity, Junior. By R. H.
JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 2s. 6d.

Science, Junior Experimental. By W. M.
HOOTON, M.A., M.Sc., F.I.C. 2s. 6d.

Sound and Light, Junior. By R. W. STEWART,
D.Sc., and J. SATTERLY, D.Sc., M.A. 2s. 6d.

LANGUAGES, &c.

English Composition, Junior Course of. By
E. W. EDMUNDS, M.A., B.Sc. 1s. 6d.

**English Grammar, with Parsing and
Analysis, Junior.** By A. M. WALMSLEY, M.A. 1s. 6d.

English Grammar and Composition, Junior.
In One Volume. 2s. 6d.

English Course, Preliminary. By A. M. WALMSLEY,
M.A. 1s. 6d.

**Brockmann-Chatrian: Le Blocus, Chapters
i-xiii.** With Introduction and Notes. By R. F. JAMES, B.A. 1s. 6d.
(For Cambridge only.)

French Course, New Junior. By G. A. ROBERTS,
M.A. 2s. 6d.

French Reader, New Junior. By J. P. R.
MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s.

French Course, Preliminary. By H. J. CHAYTOR,
M.A., and H. E. TRUELOVE, B.A. 1s. 6d.

Latin Course, New Junior. By J. V. THOMPSON,
M.A., and L. M. PENN, M.A. 3s. 6d.

Latin Reader, New Junior. By A. J. TATE, M.A. 2s.

Shakespeare: Tempest. By A. R. WEEKES, M.A.,
and F. ALLEN, B.A. 1s. 4d. (Junior Shakespeare.)

**Spelling and Punctuation (with Pieces for
Dictation).** By J. H. SHOOSMITH, M.A. 8d.

GEOGRAPHY AND HISTORY.

Geography for 1914 and 1915, Junior. (Includ-
ing Outlines of Physical Geography, the British Isles, and Europe.) By G. C.
FRY, M.Sc. 2s.

The following parts of the **Junior Geography**, by G. C. FRY, M.Sc., are
issued separately:—**The British Isles, with Outlines of Physical
Geography**, 1s. 6d. **Asia**, 8d. **North America**, 8d.

Geography, Preliminary. By E. G. HODGKISON,
B.A. 1s. 6d.

History of England, School. By M. E. CARTER,
3s. 6d. Also in Three Parts:—(1) To 1603, (2) 1485–1714, (3) 1660–1910. 1s. 6d.
each Part.

THE

JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page ...	£5 10 0	One Column [$\frac{1}{2}$ page] £3 0 0
Half Column [$\frac{1}{2}$ page] ...	1 15 0	One-Eighth Page ... 0 17 6
Per Inch in Column, 8/-.		

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—
6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.
prepaid rate.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each
8 words after, 6d.; *prepaid rate.*

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

*If a receipt is required for an advertisement under 10s., a post card or a
stamped envelope must be enclosed.*

*[Advertisers are reminded that "Letters addressed to INITIALS or to
FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post
Offices are not taken in, but are sent at once to the Returned Letter Office.]*

All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE
HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C.
should be made payable to WILLIAM RICE; Orders and Cheques may be crossed.

"The London City and Midland Bank, Ludgate Branch." *Postage stamps can
only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad,
stating full name and address of the sender; and all Foreign Money Orders
must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C

IDOLA LINGUARUM.

By Prof. JOHN ADAMS,

NO one should be surprised to find a new Idola series,
this time dealing specifically with language, since
language has always held a unique place in the educa-
tional curriculum. To begin with, it is a means as well
as an end, and in its capacity of means it is essential
in the teaching of all branches of study. So completely
is the whole curriculum permeated by the means of com-
munication that people sometimes go the length of main-
taining that whatever branch he professes every teacher
is of necessity a *Sprachlehrer*. Those of us who have
to give instruction in the history of school methods are
thoroughly tired of the eternal recurrence of the struggle
between *words* and *things*. The theorist has to patch up a
peace between forces that were never really in opposition, and
the wearisome "Things, not Words" has to be met by the banal
"Things and Words." Either of them without the other is
useless for the purposes of the schoolmaster. Accordingly,
when our professional bias tempts us to lay undue stress on
the verbal side of our work, we ought to be grateful to those
critics who seek to bring us back to the true path.

Truth to tell, it is not criticism that is lacking. Down
through the ages there comes the ceaseless wail of the prac-
tical person against the bookishness of our profession. We
have "ate paper as it were" and "drunk ink." When
Shakespeare gently gibes at the schoolmaster for believing
that things are more to him because he knows the Latin
names for them, the pedant must accept the reproof. Yet
there is a sense in which the schoolmaster is justified in his
apparently monstrous contention. The real thing no doubt
remains the same by whatever name it may be called—or at
any rate as nearly the same as the flowing philosophy of the
Heraclitean school will permit—and yet different names may
indicate different points of view. The same long-eared shaggy

quadruped may be indicated by the two terms *ass* and *donkey*. But who will venture to maintain that the same meaning is conveyed by the two terms? The notice *Cave Canem* that we can read to-day in a deserted street in Pompeii is as real as the dog that once lived and barked, and no doubt bit, under it in the olden time. The warning without the dog is useless, but the dog without the warning is dangerous. We must get into the way of realizing that this is a world in which things must be related, not isolated, if we hope to lead a rational life.

It is perhaps a warrantable reprisal of the humanist when he plunges into the enemies' territory with Condillac's *mot* and maintains that "La science n'est qu'une langue bien faite." But the attack is pardonable only as a retaliation. The practical effect of facts is greatly modified by the mode in which they are expressed in our dealings with each other. When Sir Walter Raleigh asks us to be honest and to admit that there are no such things as synonyms, he sets us upon a path that leads far. The same fact may mean different things to different persons, or, if the reader prefers another form, two persons may be unable to apperceive the same fact. May not some one call upon us next to be honest and admit that there is no such thing as translation? When we say that we translate we usually mean that we find certain ideas expressed in one language and then express those same ideas in another. Then we quarrel about what we mean precisely by this process. It is difficult to reach agreement, but, as this is a gentle article and makes for peace, perhaps it may be allowed to assume that most people are willing to accept as a gauge of the accuracy of a translation the degree in which it reproduces in the mind of the reader the effect the original did in the minds to which it was directly addressed. But to succeed in this aim is to change radically the mode of expression. The abstractness of English must be replaced by the concreteness of Latin, the flowery vagueness of the oriental must give place to the polite conciseness of the occidental. The idioms of a country are a crystallization of the national character that must be dissolved out and recrystallized into the different forms that represent the character of another nation. We know that certain ideas have no word to represent them in some languages, and we are apt to draw more or less justifiable conclusions from this lack. We are familiar with the somewhat self-complacent way we reason from the absence of an exact equivalent for our English "home" and "gentleman." But it will better become us to illustrate the point by considering the implications of the fact that our one word "sympathy" has to do the work that is shared by three German words—*Mitgefühl*, *Mitleid*, and *Mitfreude*. Why is it that in English we have no word to convey the meaning of the French *frileux*, though our Scotch friends supply the lack in their "cauldriif"? It is not without significance that Matthew v, 5 should be rendered in English "Blessed are the meek," in German "Selig sind die Sanftmüthigen," and in French "Heureux les débonnaires." Something real lies behind the shock an Englishman feels when he first encounters this French equivalent for our "meek."

Strong as is the case that can be made out on professional lines, the advocates of language are not content to let matters rest there; they take a still higher flight, and claim pre-eminence. The humanist teacher is fond of quoting, with some emphasis, the lines in which Shelley, speaking of the Deity, tells us

He gave man speech, and speech created thought,
Which is the measure of the universe.

These be high thoughts and somewhat removed from the sphere of the working schoolmaster, though worthy of consideration under the title "Idola Linguarum." Without claiming actual priority for speech the schoolmaster may not unreasonably hold that the interdependence between speech and thought is sufficiently demonstrated to warrant him in demanding for linguistic studies a foremost place. To justify the demand it is only necessary to indicate the implications of the long-drawn-out debate regarding the possibility of carrying on thought altogether independently of words. Inconclusive as the debate has hitherto proved, it has at least demon-

strated the primary importance of words in our thought processes. We may be able to do a certain small amount of thinking without the use of words, but it is very generally admitted that it is impossible to carry on adequately a *train* of thought without the help of words or their equivalents in signs, motions, or other physical manifestations. Thought appears to require something to act as a sort of anchor and keep some of the elements in their proper relations while others are being brought into line with them.

All these considerations help us to understand the meaning underlying the statement sometimes made that a man is as much a man again for every foreign language he has mastered. Here we are being carried far past the mere utility of acquiring a foreign language as a means of communication between people of different nationality. The implication is that the sky really does mean more to the man who can name it intelligently from the standpoint of different nationalities. Volapuk or Esperanto, if successfully developed as world-speech, would no doubt be of immense practical use in carrying on the business of the world, but it would not be entirely without use in the higher sense implied in the saying we are dealing with. A world-speech would have the value of a lowest common denominator of world-thought, but it would also have the value of suggesting in a vague way the differences of thought lying behind it. A knowledge of the different languages brings out the differentiated thought that is crystallized in those languages. To learn a foreign language is not merely to acquire a new vocabulary; it is to attain a new point of view. Each new language acquired implies a new background against which all our ideas may be projected. A language cannot be studied intelligently merely as a language. It must be treated as the outcome and the expression of a special culture, a special environment.

Here we are brought up against the ever-recurring quarrel about the possibility of getting the full value of a literary classic through a translation. The practical Americans treat this question as settled, so far as a working scheme is concerned. At the University of Chicago there is a chair devoted to the subject of literature in English. It is the business of the professor—the present holder of the office is a distinguished Englishman—to bring before his students, in English translations, the masterpieces of world-literature. It is not maintained that the advantage the students derive from this study is identical with that resulting from a treatment of the works in the original languages. Even the least pedantic among us must admit that there is a difference between the original and the translation. But, while the importance of the language as such is not to be minimized, it must not be confounded with the importance of the background. The Professor of Literature in English is able, within the limits of his time, to supply the necessary background. One can conceive a capable teacher giving in one year a better set of backgrounds for understanding Latin literature than is acquired in ten by a student who works at the language merely as language. We are not here seeking to minimize the value of language as such, but are merely bringing out the results of the close connexion that we have seen to exist between speech and the things we speak about. The strength of the newer classical teachers lies in the fact that they realize the necessary connexion between literature and language on the one hand and literature and life on the other. Our best teachers have now come back to the standpoint of the earlier enthusiastic Humanists.

The place the teacher gives to vocabulary determines his attitude towards language teaching as a whole, whether we consider the mother-tongue or a foreign language. Too frequently vocabulary is viewed from a wrong standpoint. It may be dealt with either statically or dynamically. Words may be treated, as ideas sometimes are, as mere mental content. Pupils may be encouraged to collect words as they collect botanical specimens. It is true that words have in themselves a certain vitality that prevents them from ever being merely objects in a literary museum; but that it is possible to treat them on the herbarium plan is demonstrated by what actually happened in the case of some of the earlier teachers. Their object was to enable the pupil to acquire as great a collection

of words as possible, and to save his time certain ready-made collections were placed at his disposal. We read of gardens of words, forests of words, treasuries of words, all implying the selection of groups of words that were supposed to be specially valuable. The principle on which these vocabularies were framed was mainly static. No doubt the pupil was supposed to have exercises on the use of the words, but the word obviously came first in the estimation of the teacher; the exercise was more or less of an afterthought. Nothing proves this more clearly than the pride sometimes shown in demonstrating that no word was used twice in certain sets of exercises. The method was in its essence the same as that followed by the young student who, tired of continually looking up the dictionary for the meaning of words he had looked up before, set about learning the dictionary systematically, as being likely to save him trouble in the long run. Learning by vocabularies is really the heroic method of mastering the dictionary, smoothed down to human possibilities by adopting the Napoleonic motto "Divide and conquer." No doubt there is room for an intelligent use of vocabularies in the teaching of a language; but the vocabulary must be used as a smaller and more easily handled dictionary, and not as a mine from which material is to be dug in order to provide exercise in its use. It is amazing how frequently the fact that the vocabulary stands at the beginning of a lesson suggests to the teacher that it must come first in the pupil's learning. He must work up to, not down from, the vocabulary. We must pass from the text to the dictionary, not from the dictionary to the text. We acquire the meaning of words by using them, and by hearing or seeing them used. A great many words come to us without our ever having deliberately considered their meaning. How many of us ever learned by deliberate instruction or study the meaning of such words as "of," "do," "he"? In each new language we have to acquire the *Sprachgefühl*, and this comes only as a result of using the language. When we know a language imperfectly we are always appealing to the dictionary; when we have mastered the language we appeal from the dictionary to the *Sprachgefühl*.

The static view of vocabulary accounts for the ever-recurring disputes about the number of words that make up the vocabularies of people of different social grades. Sometimes we are told that an illiterate peasant gets along with some three or four hundred words. Others contemptuously demand at least twice this number for the yokel. A well-known professor of education, in the first edition of one of his works, maintained that a child of five knew only five hundred words. The Secretary of the Education Department of Quebec happened to read this in his drawing-room while his little girl of just five was playing about his feet. Picking her up he began an easy but quite fair investigation, and before he set her down again she had demonstrated her knowledge of over one thousand words. The confusion arises from that word "knew." We all know a great many words that we never use. For example, one of the stock complaints against our public-school boys is their extremely exiguous vocabulary. Indeed, as Mark Twain once reduced the whole German language to the two all-expressive words *Schlag* and *Zug*, so some critics would limit the vocabulary of the public-school boy to the two expressions "rotten" and "rippin'." The truth of course is that the boy has command of a great number of words that he would never think of uttering in ordinary conversation. Who ever heard a boy out of school hours use the word "nevertheless" or the word "albeit," both of which he probably quite well understands, though he might have a difficulty in explaining them?

The teacher finds it to his advantage to follow whither the dynamic view of words leads him, and that is to the conclusion that we each have different kinds of vocabularies—at least three different kinds: the speaking vocabulary, the reading vocabulary, and the writing vocabulary. In the case of an ordinary educated person the reading vocabulary is by far the most copious. Next comes the writing vocabulary, and at the bottom the speaking. The curious may amuse themselves by observing the fluctuating fortunes of the various vocabularies according to social and other variations. For the

educator the interest lies in the fact that it is his business to correlate the three vocabularies of his pupils. The teacher has always felt it to be his duty to increase the reading vocabulary of his pupils; the writing vocabulary has not been neglected; but the speaking vocabulary has hardly received its fair share of attention. In its case there is not so much need of increase as of organization. The reproach levelled at the public school boy's vocabulary may be justified to the extent that schoolmasters have rather despised the art of talking. It is a dangerous matter to interfere with traditions that have in other directions done such admirable service. But surely it is possible to develop a richer speaking vocabulary without running into priggishness. We do not want our boys to use "albeit," but we do want them to express themselves with a little more variety than we elders at least are ever privileged to hear from our pupils in their moments of leisure. The difficulty we have just encountered is only an additional illustration of the widespread range of the influence of instruction in the use of speech.

The language question permeates the whole of school life and work, and its problems cannot be limited to the rooms in which languages are taught. No master in a school, whatever his subject, can afford to neglect the teaching of language. Fortunately mathematical masters have long been convinced that accurate speech is essential to the scientific treatment of their subject. But the other specialists in school will be well advised if they take up their share in the work of teaching their pupils to express themselves accurately. Every written exercise in school should be regarded as an exercise in composition, as well as in the particular subject in connexion with which it is written. It is an unwise pose to profess to discriminate between matter and form to the disadvantage of form. The word and the thing signified are indissoluble in human experience, and what the nature of things has joined together let not the schoolmaster try to put asunder.

It is a platitude that language may be used to a bad end. We do not forget the moral of Caliban's complaint: "You taught me language, and my profit on't is I know how to curse." But here again we have but a reminder of the intimate connexion between form and matter. Most of the pitfalls of the teacher of languages are in some way or other connected with the neglect of this intimate relation, on which it is hardly possible to insist too strongly.

THE KINEMATOGRAPH.

ONE constantly hears the remark: "The picture palace [commonly called the "Cinema"] has come to stay." If this be true, it is time we understood the tendency of this new amusement. Yet we find that, beyond Canon Rawnsley and a few more lifting up their voices and revealing its true inwardness, our teachers, cleric and lay, ignore the subject. They ignore it, apparently, because it is popular—because, forsooth, to use the words with which we commenced this article, "it has come to stay." That the cinematograph has become popular cannot be disputed. Beginning as a toy, it is now a source of amusement for the many, and at the present moment may be said to influence the lives of millions in all parts of the civilized world. As a new form of entertainment the cinematograph is a powerful rival of the theatre; and it is difficult, in the present transitional stage, to prophesy what the outcome will be. Said a recent writer: "The theatre and the music-hall have been going arm-in-arm for some time now; and that, I honestly believe, to the advantage neither of one or the other; and here we have Mr. Arthur Bourchier, who has offered his arm before now to the music-halls, offering his other arm to the cinematograph. My firm belief is they should all three go their separate ways." Yet this is only one indication of the development of the film. Plays are now produced by Sir Herbert von Herkomer, who has a kinema studio at Bushey.

The kinemetograph, nevertheless, is but a travesty of the

real drama. It represents incidents which are accentuated for the sake of sensation. These incidents, for the most part, are not true to life: the photographs are taken under abnormal circumstances, and are not in harmony with their environment. Scenes are depicted which could not take place without the concurrence of two parties, who are, it is presumed, entirely antagonistic. Moreover, the photographs are "faked." The true human element is absent. Contrast this with the theatre. On the stage you have real flesh and blood; you have men and women proud to maintain their character as artists. There may be lapses, there may be exceptions, but in the best plays the personality is revealed. In the cinematograph, on the contrary, the comedies are ridiculous, the tragedies—well, it is impossible to say anything of them; they do not appeal to any thoughtful man or woman. The pictures may "catch on" for the moment, but they are entirely opposed to true art.

Yet the cinematograph is the most popular amusement of the day. There is hardly a town where it is not to be found. Even Stratford-on-Avon has been invaded, and it is said the Memorial Theatre is neglected for the Picture Palace. This is the more remarkable when we remember that from an artistic standpoint its shortcomings must be recognized. Its humour, its pathos, its passion are at the best not comparable to a good play, for the human element is absent. Indeed, there is a lack of reality about the whole performance. The photographs have been taken under conditions that cannot be considered normal or true to life. Further unreality is experienced from the fact that if the human voice is employed at all it is extraneous to the picture; it is something added to the pantomime, and we know it. The greatest asset of the drama, the human voice, actuated by real feeling, the expression of emotion, is wanting. These things are sufficient to condemn the picture palace, and to place it infinitely below the theatre.

It is claimed by some that the cinematograph is educative, or, at least, that it may be made educative. Let us for a moment see whether this can be admitted. Take an example. It has been stated that the growth of a plant can be illustrated by the cinematograph. "Here," says a schoolmaster in the *Manchester Guardian*, "in the twinkling of an eye, you have a plant grow, develop, and arrive at maturity. Yet in the schoolrooms of our progressive teachers you have the real plant grown in the germinating box. The child witnesses the slow development of the root and stem. The progress is noted in the drawing lesson and dated. In the senior classes the actual growth is measured. With a time record, and by the help of the metric ruler, drawing and painting lessons, a real idea of the growth of the plant is arrived at. Sense of time and proportion is presented to the child, but, in the film, the child knows it is not real—it is only a fake—and the sense of the unreal turns the child from it. It serves as a joke, but it is not science. I tested a class of senior scholars of an intelligent standard. They were required to describe a process which had been recently shown on a film at the picture show, and not one gave the proper sequences of the process."

According to a recent circular, "young minds do not learn, in any true sense of the word, by having information, unselected and heterogeneous, poured in upon them, but by assimilating what is given them by an active process analogous to physical digestion, and, to ensure that this, process is made possible, great care must be exercised, not only in the choosing of the films, but in the times of their exhibition." Every precaution, be it observed, is to be taken in the choosing of the films; "exciting scenes," we are told, "are to be avoided," and so on. Evidently, danger is admitted, and it is sought to minimize the danger. But is the game worth the candle? The mental demands are small; there is no true perception which is the result of observation and comparison. The desire for thought-action gives place to an inclination to have the senses atrophied. The brain is violently assailed through eye-gate alone; thought has no time to take its proper place; the mind cannot work freely. Canon Lyttelton believes that the influence of moving pictures is prejudicial to learning

exactly in the same way as the reading of snippets of information in halfpenny newspapers, only to a much greater degree. "If," he says, "the English people wish to create race suicide they can do it by over-taxing the brain energy of the very young, and never has human ingenuity invented a device more efficacious for this sinister end than the moving pictures."

We live in an age of science, but the knowledge we have gained, and are gaining year by year, does not necessarily affect life for the better. Our knowledge of fire is immensely in advance of our ancestors; the power of water was never understood as it is to-day; but we have learned that both fire and water, though they may be good servants, prove bad masters. And of the cinematograph in its present initial stage we may say its possibilities are great, but its influence, as it now exists, is frequently bad.

J. C. WRIGHT.

JOTTINGS.

THE Royal Sanitary Institute announce a course of lectures for school teachers, to be given at the Institute and Parke's Museum, 90 Buckingham Palace Road, on Physiology, Personal Hygiene, and the Sanitation of School Buildings and Dwellings. The lectures, at 7 p.m., will begin on Monday, February 16, and be continued on Mondays and Fridays till April 6th. The fee for the course is one guinea. Names should be sent in at once to the Secretary of the Institute.

THE Moral Education League will hold their sixteenth Annual Public Meeting at the Royal Society of Arts on Friday the 6th inst., at 8 p.m., when Mr. William Archer will deliver an address on "Knowledge and Character."

MR. J. HAROLD WILLIS, B.Sc., of the Education Officer's Department of the London County Council, has been appointed Principal Clerk for Higher Education under the Glamorgan County Council.

THE International Commission on Mathematical Teaching, of which the British members are Sir George Greenhill, Prof. E. W. Hobson, and Mr. C. Godfrey, will meet at the Sorbonne, Paris, on April 1-4, 1914, to discuss (1) the results obtained by the introduction of the calculus into the higher classes of secondary schools; (2) the place of mathematics in higher technical education. The General Opening Meeting will take place on April 2, at 9.30 a.m., under the presidency of M. Lucien Poincaré, Director of Secondary Education, when Prof. P. Appell will welcome the members, and Prof. F. Klein, President of the Commission, will deliver an address. Prof. Emile Borel and Prof. d'Ocagne will read papers. Conference tickets (gratis) and prospectus may be obtained on application to Mr. H. D. Ellis, Joint Hon. Sec., Mathematical Association, 12 Gloucester Terrace, Hyde Park, London, W., before February 26. Other meetings for which tickets may be obtained include those of the French Philosophical Society, April 6-8; the French Physical Society, April 15-17; the Congress of French Scientific Societies, April 14-18. The French railway companies will grant a 50 per cent. reduction to holders of conference tickets.

THE Welsh Department has issued for the use of teachers (price 3d.) an interesting pamphlet with suggestions for the celebration of St. David's Day. The one thing certain, or at least agreed upon, is that the Saint died on March 1. His earliest biographer, Rhygydd, lived some five centuries later and gave him the patriarchal age of one hundred and forty-seven years, but to the Welshman he is no legendary and half mythical figure like our English St. George. Of another Welsh worthy, Sir Hugh Myddelton, founder of the New River Company, there is a life and a striking portrait.

A MUSIC MISTRESS writes to us to complain of an unjustifiable system of touting that is creeping into the teaching profession. A certain London Academy which professes to impart "the one and only way of teaching music as an art," not content with circularizing head mistresses, is sending round a lady tout who inquires whether the Head is satisfied with her music staff, and urges her to send one or more to learn "the one and only way." Head mistresses will take warning and see that the lady-tout is not admitted.

THE REV. B. OWEN WILLIAMS, who died last month in his ninety-first year, was a contemporary of Tom Hughes at Rugby, and the original of "Slogger Williams" in "Tom Brown's Schooldays." His antagonist was the Rev. Augustus Orlebar, who died in 1912. The two combatants were lifelong friends.

IN the International Exhibition at Lyons, which will be open from May to October, "Schools" will form one section, and special attention will be devoted to the "Co-operation of Parents and Masters." Educators willing to contribute papers or documents to this section are requested to communicate with Prof. Paul Croizet, 110 bis, Boulevard Maiesherbes, Paris.

ARRANGEMENTS have been made by the Teachers' Guild for holding Modern Language Holiday Courses during the month of August at the same three centres as last year—Honfleur, Lübeck, and Santander. A full program will be issued in March.

AN American teacher hit on an ingenious device for improving the sanitation of a small country town. Finding that her lessons on health produced no effect on the home, she announced to her class one Friday afternoon that their work on Monday would be to write an essay on "The Worst Yard in Town and Why." Saturday would be a holiday to be devoted to a preliminary inspection, notebooks in hand. The best essay would be sent to the State Board of Health, who had offered a prize and would publish the prize essay. On her way home from the schoolhouse she observed the children busily raking and swilling their own yards, and in some cases the parents assisting.

THE Council of the Boy Scouts' Association are asking for an endowment fund of £20,000. The chief need is a special body of instructors for scoutmasters and others who would gladly take a part in the movement.

MR. H. J. CRAWFORD, Principal Clerk for Higher Education to the Glamorgan C.C., has been appointed Secretary to the University of London Appointments Board, in succession to Dr. A. D. Denning, resigned.

PROF. NAIRN will begin his course of six lectures on the Study of the Gospels in Relation to Teaching in Schools on Wednesday, Feb. 4th. The lectures will be given at 6.15 p.m., at King's College, Strand. For tickets apply to Secretary, Association for the Teachers' Study of the Bible, Avory Hill Training College, Eltham, S.E.

LAST December the London Teachers' Association instituted an inquiry as to the Promotion of Children and sent out a *questionnaire*, marked "Private and Confidential," to head teachers, asking for statistics, e.g. the number of children who had been in the top class for more than one, two, or three years. Sir Robert Blair has issued a circular informing them that they are prohibited by the Regulations from filling in the form "as it involves the use of school organization." The public will draw their own conclusions from this attempt of the L.C.C. to burke inquiry. We can only hope that we are doing them wrong, and that they are themselves conducting an official investigation.

MANCHESTER GRAMMAR SCHOOL.—At the Old Boys' Annual Dinner on January 8, Mr. J. L. Paton announced that, to celebrate the fourth centenary of the School, it was proposed to raise a fund of at least £10,000 among Mancunians, in order to pay off the debt incurred for their new buildings. At present this absorbed every penny of profits, and directly there was a balance on the right side the Manchester City Council and the other Educational Authorities reduced their grants. They needed money, moreover, for the purchase of playing fields and the extension of scholarships.

THE following candidates gained the Gold and Silver Medals offered by the Associated Board of the R.A.M. and the R.C.M. for the highest and second highest Honours marks respectively in the Intermediate Grade of the Local Centre Examinations in November-December last, the competition being open to all candidates in the British Isles. Intermediate Grade Gold Medal: Master Bernard T. Broughton, Liverpool, Violin. Intermediate Grade Silver Medal: Miss Catherine Campbell, London, Pianoforte.

THE Hon. Secretary of the Association for the Education of Women at Oxford writes to us to point out that, by a recent Statute,

women can qualify for Research Degrees in Letters and Science, though not yet actually admitted to the statutory degree. Candidates are required to have taken the Honours course at Oxford or a degree at some British University, and also to furnish evidence of their fitness to pursue research.

THE Head Master of Merchant Taylors School, Crosby, writes to us to correct the statement that the school had been transferred from the Company to the Lancashire County Council. It has an independent Governing Body, on which Oxford, Cambridge, and Liverpool Universities are represented as well as the County Council.

AMONG the New Year Honours, except the Right Hon. James Bryce and his four fellow Peers, there is hardly a name that will be familiar to the general public. In the profession, however, most will recognize Mr. Ernest Rutherford, Professor in the University of Manchester, Director of the Physical Laboratory, and winner of the Nobel Prize for Chemistry in 1908; and Mr. Robert Blair, Educational Officer of the L.C.C. since 1904.

THE Education Society of the Teachers' Guild is arranging a discussion on Saturday, February 7, at 5.30, at 74 Gower Street, on "The New Scheme of Training Teachers in Schools." Prof. Adams will be in the chair. Head and assistant masters and head and assistant mistresses wishing to attend should send their names to the Hon. Sec. of the Education Society at the Offices of the Guild, 74 Gower Street, W.C.

IN the *Bookseller's* classification of books published in 1913 Educational stand eighth on the list—453, against 521 for 1912 and 560 for 1911. Fiction, which, as usual, heads the list, shows a rise of 202 works since 1911.

IN spite of Lord Haldane's dictum, it may well be contended that the reform of education should begin from the bottom. In the care of infants England lags far behind other countries. In France Consultations des Nourrissons (Nurslings' Councils) were started in 1904. The movement spread, and in the intervening decade infant mortality in the principal French cities has decreased by a third. In 1905 Germany followed suit, and there are now 251 Infant Care Stations in the German Empire. In Berlin alone there are seven such stations financed by the Municipality, and the annual expenditure on each averages £2,400. In 1909 the babies brought to the stations numbered 13,494. As one result the percentage of bottle-fed infants has dropped from 60 to 35 per cent., and the infant mortality of the whole city has fallen from 20.5 to 15.6. In Great Britain there are only eight Schools for Mothers in receipt of over £200 a year. The highest is Glasgow (municipal), £650, and next stands St. Pancras (private), £600. We need another Florence Nightingale to preach the gospel of infancy.

OBITUARY: EBENEZER COOKE.

THERE died on December 16, 1913, in his seventy-sixth year, a man whose name will live as a pioneer of education. He was born at Horning, Norfolk, where his father had been the village schoolmaster. As a boy of twelve he came under the influence of a teacher named Morgan, an ardent disciple of Pestalozzi, whose influence can be traced through his subsequent career. At the age of sixteen he was apprenticed to Mr. John Lane, a lithographer, whose daughter he subsequently married, and started a flourishing business on his own account; but he discovered before long that his vocation was not business but teaching. So a teacher he became and remained to the very end, when death overtook him in the interval between two lessons.

In 1855 he joined Ruskin's drawing class at the Working Men's College. Ten years later he was appointed teacher of the Ruskin Drawing Class at the Working Women's College, Queen's Square, a post that he held for twenty-six years. He and his great master both came independently to the same conclusion on which his theory and practice were based: "Drawing from Nature is not drawing according to Nature, and the teaching of drawing must follow the nature of the child and its development." In 1878 he read a paper before the Education Society recently founded by C. H. Lake on Nature Teaching, illustrated by children's drawings, the earliest attempt to investigate this branch of psychology and

the precursor of James Sully's studies and numerous American monographs. In connexion with the Froebel Society he organized classes for blackboard, free-arm, and memory drawing, and elaborated his system of brushwork with colour and design.

In 1889 he co-operated with Sir H. Llewellyn Smith, the founder of the Whitechapel Crafts School, of which his son Gilbert was appointed Principal. The school, which still flourishes, won a gold medal for its exhibit at the Chicago Exhibition of 1893. Full particulars of his system and method may be found in Vol. I of "Educational Reports," under the title, "The A B C of Drawing, by E. C." He was also the author of the "New Alternative Syllabus of Drawing for Elementary Schools," issued by the Education Department in 1896, a syllabus which revolutionized the teaching of drawing throughout the country. From 1900 onwards he took an active part in all the International Congresses on Drawing, and in 1912 he was invited by the London County Council to give periodic lectures to their teachers, a post that he filled to the time of his death.

Ebenezer Cooke was the most modest and retiring of men, and others have reaped where he has sown. A tardy recognition of his public services came in the last year of his life, when his name appeared in the Civil Service List. He valued highly the honour, but died before the first instalment of his pension became due. Nor can he have seen what he would have prized no less, an article in the January number of a contemporary by Vice-Chancellor Sadler, in which his name is coupled with that of Richard Wormell (also gone to his rest), and another, as three pioneers of education.

COLONIAL AND FOREIGN NOTES.

GERMANY.

Defoe sent forth the first part of "Robinson Crusoe" in 1719.

Robinson Crusoe as Educator.

The following year a translation into German appeared, was received with favour, and became the begetter of a strange and numerous progeny: "The Spiritual Robinson," "The Medical Robinson," "Biography of the European Robinsonetta," "Robunse with her Daughter Robinsgen," and so forth. Pedagogues saw that the adventures of a Robinson could be converted into sugar coating for moral pills, and Campe's "Robinson the Younger" went through a large number of editions. Fifty years ago, in the winter of 1863-4, a series of conferences took place in Germany with the object of turning the story to the best possible account in religious education; and of these conferences the "Robinson Crusoe" published by Gräbner of Leipzig was the result. A jubilee revision of the book is now announced. Its main theme is the spiritual development of the young hero, and readers are shown his discontent with fate, then his repentance for the sorrow that he had caused to his mother, and lastly the emergence of an obscured faith in God. Whatever be the value of such a treatise in moral and religious education, it can hardly be credited to Defoe, who became tedious in proportion as he became didactic. Does anyone remember the second part of "Robinson Crusoe" with pleasure? By the way, the Germans must be distressed to learn that the hero, with them an educator, is in England the "principal boy" in a pantomime.

The English Government has been hard to move in the matter of Continuation. Indeed, only once has Mr. Asquith shown practically an interest in education.

When he transferred Mr. Runciman from the Board of Education to the Board of Agriculture it was to indicate an opinion that our children are, after all, of more importance than our salads. Meanwhile Germany goes forward and is steadily developing her forms of Continuation. We cannot in this journal follow the fortunes of the different Bills drafted to promote it in various German States. We look, however, at the latest of which we have knowledge—that for the Duchy of Oldenburg—and, instead of analysing the whole, we seek information from it on one matter. Section VII, *Das private Fortbildungsschulwesen und Fachschulwesen*, shows the German State at work in controlling private enterprise. The establishing and carrying on of a private institution for vocational training, says the Bill, needs the approval of the Landesamt. This approval is to be given only if the applicant can prove that he has adequate means, is of good moral character, and qualified to teach. It may be refused on other grounds; it may be given only for a time, and, for good cause, it may be revoked. With an application there must be sent in a plan of the establishment, showing the name that it is to bear. When the institution has been established, every change in the head master-

ship or in the staff, and all important alterations in the scheme of instruction and in the rooms where it is given are to be notified to the Landesamt. So cautiously does Germany guard her young in the field of Continuation. In England a burglar may keep a night school, and Fagin probably had a grant in aid.

Let us illustrate the actual state of affairs in Germany. At Dortmund, Westfalen, there is an industrial continuation school (*gewerbliche Fortbildungsschule*). The ninth year of compulsory attendance (*Pflichtbesuch*) ended on March 31, 1913, and the sum available for maintenance had been 108,650 Mk. How was it raised? Employers of labour paid 10 Mk. for each pupil; the State grant was 20,000 Mk.; 42,930 Mk. came from local funds, the town supplying and repairing the schoolrooms. The number of pupils at the close of the year was 2,272, and 477 were set free, their obligation to attend having expired. There were 87 classes, in 78 of which six hours of teaching a week were given, and in 9 four or five. Practical instruction was received by painters, printers, compositors, bookbinders, hairdressers, confectioners, and waiters. We shall be asked when the instruction was given. It was distributed thus: 32.28 per cent. of the lessons fell in the morning between 8 and 12; 27.17 in the afternoon between 2 and 6; and 40.55 in the evening between 6 and 8. No teaching was done after 8 o'clock in the evening or on Sundays. The attendance was fairly regular, absences being most numerous in the case of butchers (13.02 per cent.), and least numerous in the case of the railway men (4.48 per cent.). To enforce attendance, and for disciplinary ends, police punishments (*Polizeistrafen*) may be imposed; but during the year in question these were diminished in number by means of the newly introduced detention punishments (*Schülerarreststrafen*). The detentions took place on Sunday afternoon between 1 and 7, and were from two to six hours in duration, the pupils, collected in one room, being employed in writing—most commonly in copying out the regulations that govern the school. In 21 cases recalcitrant pupils had to be fetched by the police. Looking at a brighter side of the picture, we find that for conspicuous diligence or good achievement 147 pupils received *Prämien* (rewards) to a total value of 444 Mk.

Mr. Pease believes that compulsion were too drastic a measure for England, and, indeed, *Polizeistrafen* and *Schülerarreststrafen* might cost the party that made them possible some votes! For Germany, at least in many places, compulsion is not too drastic, and it yields her a goodly return. Those who will not pay the price of seed must not expect a harvest. Yet it grieves us that it should be said that Germany is making men whilst England is making money.

FRANCE.

The test of a good school in olden times was that the boy left it in the evening sore; then it was discovered that its merits were greater if he went to it in the morning gladly. From the text of an address delivered at the prize distribution of the *lycée* Hoche, the French seem to have learned the secret of making education attractive, at least in the elementary classes of the *lycée*. "Voyez-les arriver, nos petits, le pas alerte et la mine éveillée, par les chemins fleuris qui conduisent à la cour de récréation!" Have they the sullen look of children about to be bored? No—boredom has been banished from the *lycée*; its courtyards and its classrooms have been made pleasant places for the little boys. To charm their eyes the walls are adorned with pictures, engravings, and maps; to feed their curiosity and to develop in them the spirit of observation, collections are formed and little museums created, to which they themselves contribute objects of interest. At the *lycée* Hoche there is a magic lantern to teach by picture, and there is a botanical garden no less instructive. French is instilled not through commonplace phrases committed to memory, but by reading and commenting on the great writers. Arithmetic is made concrete, realities being joined to the notion of numbers. The children measure and weigh the things about them, and the problems that they do are the little problems of daily life.

The French girl used to be educated in convent schools; the Third Republic provides public *enseignement secondaire féminin* just as it provides secondary education for boys. What it offers is being accepted in growing measure. On November 5, 1913, there were 20,339 pupils in the *lycées*, as against 19,898 on November 5, 1912; there were 12,943 in the *collèges*, as against 11,882 in the preceding year; and lastly there were 5,076 attending secondary courses, as against 5,565. This decline in the number of those who attended secondary courses is itself a sign of progress, for it is due to the fact that the courses are being transmuted into

Continuation in Practice.

Or Compulsion.

L'éducation Joyeuse.

Statistics of Secondary Education for Girls.

collèges. In all, there were 38,358 girls receiving public secondary education in 1913 and 37,345 in 1912, an increase for the year of 1,013. In Paris alone the increase was about 600; it is in the towns that the Republic gains on the Church.

A new Library.

Last November there was opened a new library, *la bibliothèque Thiers*, installed in the house of the former President of the Republic. It is consecrated, in particular, to the contemporary history of France from the Revolution to the present day. The stock of books derived from M. Thiers himself is comparatively unimportant. The major part has been bought with funds provided by his sister-in-law; in 1911 the fine military and Napoleonic library of Henri Houssaye was acquired.

UNITED STATES.

The United States is ahead of us in respect of vocational guidance. The *Bulletin* (ix. 10) of the Grand Rapids Public Library—our thanks to the Chief Librarian for his kindness in sending it—shows

Vocational Guidance.

how much Middlesex has to learn from Michigan. In Michigan they give the child a chart of the seas before they send him forth on the voyage of life. He is encouraged to consider the elements of character that are wont to give success—to compare his own abilities and opportunities with those of successful men and women in the past. When he has fixed on work which he thinks he can do, his guides seek to stir his ambition to do it well. A purpose is now before him: when he has chosen a goal, even tentatively, his progress has direction. His later study of moral and social ethics becomes a study of himself in a social environment and gains thus illumination.

By what practical means is guidance furnished? In Grand Rapids through the English lessons, which all pupils must take from the seventh to the twelfth grade. Brief themes and discussions form the

How it is Given.

basis of the instruction. Boys and girls receive advice from special teachers, and books are classified so as to assist them at the several stages of their struggle towards a vocation. We give, in the wish to be helpful, the scheme of guidance, with examples of the books, taken from a list which is revision based on the experience of the last two years. Seventh grade: Theme—Vocational ambition. [R. S. Baker, "Boys' Book of Inventions"; Sarah K. Bolton, "Lives of Girls who became Famous"; Jas. Parton, "Captains of Industry."] Eighth grade: Theme—The Value of an Education. [W. Drysdale, "Helps for ambitious Boys"; G. B. Hill, "The Young Farmer"; Lu. Senarens, "How to become a Naval Cadet."] Ninth grade, first half-year: Theme—The Elements of Character that make for Success in Life. [W. H. D. Adams, "The Secret of Success"; O. S. Marden, "The Making of a Man."] Ninth grade, second half-year: Theme—Vocational Biography. [Lives of Franklin, Gordon, Florence Nightingale, &c.] Tenth grade, first half-year. Theme—The World's Work. [C. M. Alder, "Women's Ways of Earning Money"; L. R. Dicksee, "Office Organization and Management"; C. W. Haskins, "Business Education and Accountancy."] Tenth grade, second half-year: Theme—Choosing a Vocation. [Arnold Bennett, "How to become an Author"; Hugo Münsterberg, "The Choice of a Vocation"; J. S. Stoddart, "What shall I do? Fifty profitable Occupations for Boys and Girls."] Eleventh grade, first half-year: Theme—Preparation for Life's Work. [C. S. Cooper, "Why go to College?"; L. H. Gulick, "Mind and Work."] Eleventh grade, second half-year: Theme—Vocational Ethics. [T. G. Carson, "Man's Responsibility"; L. F. Post, "Ethics of Democracy."] Twelfth grade, first half-year: Theme—Social Ethics. [L. H. Gulick, "The Efficient Life"; F. D. Maurice, "Social Morality."] Twelfth grade, second half-year: Theme—Civic Ethics. [Lyman Abbott, "The Spirit of Democracy"; N. S. Shaler, "The Citizen."]

Columbia University, New York, is a giant among academies. To promote its work huge sums are subscribed. President Butler's Report (November, 1913) states that during the year the sum of 617,865 dollars

Columbia University.

was given to establish permanent funds or to add to existing funds; the sum of 337,475 dollars to purchase land or to erect and equip buildings; and the sum of 466,463 dollars to be expended by the University for designated purposes. And its students are numerous enough to fill a town: there are 13,120 of them receiving instruction in some form or another. But it is not in figures that the President's pride is placed. "The true test and measure of a University's efficiency," he says, "are to be found in the productive scholarship of the University's teachers and in the quality of the men and women who go out with the stamp of the University's approval upon them." He is able to point to a great mass of admirable work, the product of Columbia's studies and laboratories,

and to the amount and variety of the public service rendered by its members. What London University will become in the future we cannot say; in the development of it the authorities will do well to study the history and experience of Columbia as well as the rapid growth of the modern foundation, Berlin. An academy in a great city cannot draw its precedents from academies in the groves by Cam or Isis.

UNIVERSITIES AND SCHOOLS.

LONDON.

The two outstanding events of the month have been the Conference on Military Education and Sir Hildred Carlile's benefaction of 100,000 guineas to Bedford College for Women. The Conference drew a large and representative attendance, including Sir Edmond Elles, Sir Robert Baden-Powell, Sir Lonsdale Hale, Prof. Spenser Wilkinson, Mr. L. S. Amery, M.P., and representatives of the War Office, the Territorial Force Associations of London and the Home Counties, the London County Council, several City Companies, and the bodies specially interested. A resolution was adopted without dissent declaring that a need exists in London for a special institution for military education, particularly for students of the University and for Territorial officers. It was moved by Sir Edmond Elles and seconded by Mr. L. S. Amery, and a notable contribution to the discussion came from Prof. Spenser Wilkinson, whose work at Oxford as Professor of Military History is well known. A committee is to be formed to draw up a scheme for the proposed institution.

Sir Hildred Carlile's princely benefaction to Bedford College, in memory of his mother, Mrs. Edward Carlile, should enable the College to take a foremost place among institutions for the education of women. As Lord Haldane said, in acknowledging the offer, "Sir Hildred's generosity will place the College on an enduring foundation and has set an example which should influence the ways of thinking of others." The purposes for which the money is to be used have not yet been determined, but it is expected that a part of the fund will be used for the establishment of professorships.

A scrutiny of the lists for the B.A. and B.Sc. Honours recently published throws an interesting light on the work of the internal colleges and on the subjects studied. At the B.A., 13 took Honours in Classics, 8 in Mathematics, 53 in English, 32 in French, 8 in German, 3 in Hebrew, 4 in Philosophy, 1 in Psychology, and 26 in History. At the B.Sc., 13 took Honours in Mathematics, 18 in Physics, 48 in Chemistry, 6 in Geology, 13 in Botany, 1 in Zoology, 3 in Physiology, and 2 in Psychology. It will be seen that the largest Honours Schools are in order: English, Chemistry, French, History, Mathematics, Physics, and Botany; and of these, History has probably progressed most rapidly in recent years. At the B.A. the success of students at Bedford College and Holloway is particularly noticeable. University College and the Royal College of Science show the greatest numbers of successes at the B.Sc. Examinations. King's College does well in Physics, taking 7 places, against 5 for the Royal College of Science and 3 for University College.

Your correspondent looked in at a protest meeting held at the smaller Queen's Hall, on January 9, on behalf of external students. Canon Masterman appeared as a new convert to the cause. A resolution was adopted strongly deprecating any proposal that limitations should be placed upon the existing facilities for obtaining external degrees at the University. No one pointed out that limitations are at present in operation in respect of external degrees in medicine, architecture—and, I believe, mining—in each of which a course at an approved institution has been followed before an external student is admitted to the degree examination. At this precise moment, in the view of the meeting, such limitations are to stop—thus far and no farther. The Royal Commission suggests *inter alia* that a similar limitation should be extended to degrees in the proposed new Faculty of Technology. The meeting emphatically protested against the suggestion—possibly with reason—but the question is evidently one for experts. The meeting was on surer ground in demanding the continuance of the present powers of Convocation and opposing any change in the organization of the University which would lessen the influence of graduates upon its governing body or councils. One witty speaker suggested that the Commissioners, before applying these principles for the government of Universities in their own Universities, had thought it best to try the experiment on a dog.

A standing reproach to the University—its indifference to the social life of its graduates and undergraduates—is at last to be partially removed by the opening of a club for graduates, teachers, and officers of the University. Premises at 19 and 21 Gower Street have been selected for the first home of the Club. The houses are

directly opposite the site of the proposed Shakespeare Memorial Theatre. A strong and representative committee has been formed with Sir Henry Miers (Principal of the University) as Chairman.

OXFORD.

The first meeting of Congregation this term is to be devoted to the consideration of amendments to the Statute for the reform of Responsions. They are of two kinds. Some are intended to make the examination easier. One, for example, proposes that there should be four rather than five subjects. The result of this, as Latin, Greek, and mathematics must be left in, is to make English optional. Another which will probably meet with general approval proposes to keep algebra and geometry as alternatives. The other class of amendments deal with Latin and Greek and propose to allow the use of dictionaries in translation and of grammars in composition. It will be interesting to see their fate. The Statute as a whole will probably pass, though there is strong opposition to it in certain quarters.

On February 3 Congregation will have before it the second attempt to change the Constitution of Council. The new Statute is framed in accordance with the voting on a series of resolutions presented by Council to Congregation the term before last, when Congregation, having previously rejected a proposal to throw all seats open without distinction on the ground that such a plan was unfair to the professors, then proceeded to reject all other alternatives offered to it and to pass the proposal it had previously rejected. The professors will protest against the abolition of their privileges, and with some reason. In the original proposals for reform it was proposed to give the professors some special privileges on the new General Board of the Faculties and on the newly constituted Boards of Faculties, and it was thought that as a compensation for this the special seats for Professors in Council might be abolished. As the statute dealing with those matters passed through Congregation however, amendments were introduced and carried which left the Professors on the whole in a position of less authority than they had had—a strange result of reforms part of whose object was supposed to be the assertion of the University against the colleges.

I ought last term to have noticed the passing of a Statute which allows women to obtain not indeed degrees but certificates corresponding to the degrees of B.Litt. and B.Sc. One noticeable feature in it, amendment to which was threatened but not pressed, is that it allows the work of candidates to be supervised by persons who are not members of the University—a proper recognition of the work of the staff of the Women's Societies.

The repetition this year of the congestion of scholarship examinations in the first week of December has renewed the hope that some system may be devised to distribute scholarship examinations more evenly over the year. All the Oxford colleges have now accepted the principle of rotation, but we hear that the opposition of Trinity prevents Cambridge from joining. That will probably mean that nothing will be done this year.

The last *Gazette* announces an amending Statute made by Christ Church, by which it is proposed to establish instead of the three existing Lee's Readerships three Professorships in Anatomy, Chemistry, and Experimental Philosophy. They are to be constituted when the present readerships fall vacant. As the Readership in Chemistry is at this moment vacant the University should soon have two Chemistry Professors. This, with the recent appointment of Prof. Perkin and the new laboratories which are now being built, should give a great impetus to the study of chemistry in the University.

Appointments.—The appointment of Mr. Wells to be Warden of Wadham will be welcomed by a large circle of his friends. Mr. Wells has to many people almost "been Wadham" for many years, and he has also played an important part in University affairs. Mr. A. C. Clark, of Queen's College, has been appointed Corpus Professor of Latin in the place of Prof. Robinson Ellis. Queen's College have filled up the vacancy thus caused by the election to a Fellowship of Mr. John Bell to Balliol College.

CAMBRIDGE.

The successor of Sir Robert Ball is Dr. H. F. Baker, of St. John's, and it is possible to doubt whether an election of the kind has ever given more pleasure than this does to the friends of Dr. Baker, so high and—one might say—so unusual is the regard with which he is honoured. A

great mathematician, he commands among men who have no mathematics a deep respect and admiration in virtue of an honesty of thought and character which are very unusual, and a gift of quiet friendliness happily less rare among students.

The *Review* announces that "the Chair was established for astronomy and geometry, and it is no secret that the electors had to appeal to the Chancellor to decide as to which of these subjects they should attach more weight." Dr. Baker's work has lain in the direction of geometry. It is interesting to note that the General Board—a much criticized body whom there are none to praise and very few to love—selected Dr. Baker to be deputy for Sir Robert Ball last term, and the Grace appointing him was published but not voted on when Sir Robert died. Their choice is thus strikingly confirmed.

Before we leave St. John's, it is pleasant to record the presentation of portraits of the Master and Prof. E. C. Clark. Perhaps the latter is the more successful picture, as the Master is painted standing with the air of a Vice-Chancellor, and the severity of the painter and perhaps the fatigue of standing have eliminated his twinkle—very much to the regret of his friends. It is unusual, I think, in the case of such presentations that the cost is over-subscribed, but in this instance it was, and the subscribers received cheques restoring each a third of his contribution. Someone has wittily called it "the picture that paid a dividend."

Prof. Clark, who has been Regius Professor of Civil Law for longer than most of us can remember, has placed in the Prime Minister's hands his resignation of his Chair. The appointment of a successor rests with the Crown.

Once more the question of Indian students has been raised by the Cambridge correspondent of the *Athenæum*. He emphasizes the solitude of Indian students here, so far as Europeans are concerned, though he acquits the English undergraduate of consciously avoiding them. I cannot quite go so far, as I have heard the abominable term "nigger" too often. The writer goes on to urge that the Indian element gains little either socially or intellectually from Cambridge, and does not even take part in our athletics. He debates, we are told, and it is darkly hinted that "he does not spend his leisure hours as healthy Englishmen in the University do." And the question is raised "whether the Government of India ought not to abandon their policy of encouraging students to come to England. Whether they get any good by coming to Cambridge is problematical, and whether the University does is certainly not a problem at all."

I disagree with the conclusions here, but I admit the base of fact. The Indian is a solitary figure but for his countrymen, and here and there an acquaintance with shop-girls at a dancing class. But will any action of the Indian Government stop natives of India coming to Europe for education—could a Government bar the exodus of natives of capacity to study at reputed seats of learning? And if it debarred them from Cambridge—or if the college tutors in some fit of ultra-tutorial narrowness excluded them, and were seconded by the Censor of Non-Collegiate students—what would happen? People forget or never noticed a letter once printed in the *Review* from a brilliant Indian—a University prizeman, not a British subject at all, but the subject of a native prince. He dealt with this suggestion of exclusion, for it is not new, and reminded us of what we—especially tutors and the like—forget: that there are other Universities. London, I understand, swarms with Indian students, and is not, I learn, a better place of resort for them; the conditions are worse than here—lodgings, associates, ideals, and all. But it was not of London that this gentleman reminded us: it was of Universities abroad which we do not control, and where the young Indian mind may be even less likely to be trained to love English supremacy. And there is America, too, I suppose, where at one time the Japanese thronged.

The other way out is in another direction. Hysterical efforts I have mentioned before by doctrinaire masters and professors to impose military efficiency on prospective B.A.'s by way of national service. Here is a national service, I venture to think, of a less histrionic kind, with no uniform, no flourish, no popular heroism—but real service for all that, and harder perhaps into the bargain—the cultivation of friendly relations with Indian students. Some of your readers may know such men—they and the Egyptians are in every University centre now—and I hope they will be willing to take the trouble to understand a stranger and a solitary.

I dare say some among your readers have their own quarrels with Mr. Lloyd George, real or imaginary. We, or some of us, have a grievance of our own. He has given notice to introduce to the House of Commons a Bill to deprive the Vice-Chancellor of his ancient right to

(Continued on page 120.)

THE BEST AND CHEAPEST DICTIONARY FOR SCHOOL USE.

The 'Highroads' School Dictionary

576 pages. Cloth bound. Sixpence net.

EVERY teacher appreciates the paramount importance of providing each of his upper class children with a dictionary. No better educational habit can be acquired than the "*dictionary habit*"—the practice of habitual reference to a dictionary for the elucidation of all new or unfamiliar words. Hitherto, two difficulties have faced the teacher. First, most dictionaries on the market are designed for adults and are prone to explain *obscurum per obscurius*; and second, the high price of most reliable dictionaries has been a deterrent. In the "**Highroads**" School Dictionary the definitions are always given in terms *that a child can understand*. The low price of Sixpence brings the dictionary within the reach of even the most penurious schools.

Clear—Simple—Inclusive—Handy—Cheap.

Every child in Class III and upwards should be provided with this dictionary. By means of it the teacher's work is reduced, the children are taught self-reliance, and are led to acquire the "*dictionary habit*."

This dictionary not only contains *simple explanations* of all the words occurring in ordinary books, but *indicates the derivation* and the relationship of words, and gives a simple guide to the *pronunciation of all words of more than one syllable*. An appendix contains *the chief words and phrases from classical and foreign languages* current in ordinary literary writing, the chief *affixes* and *suffixes*, and the more usual *geographical roots*.

FRANCIS HODGSON, 89 Farringdon Street, London, E.C.

grant wine licences within the town. The custom goes back, we are told, to days when the Proctors tested weights and measures—I don't know if this included measuring the old "yards" of butter. It is urged that Mr. Lloyd George's Bill destroys a fine old curiosity, for nobody's gain, just out of official pedantry—that passion for making everything uniform which all small souls call principle.

Mr. Lloyd George, it is rumoured, is coming to speak at the Union this term ("Ladies Not Admitted"). May we not hope that he may be brought to book for this wanton intrusion into the sanctities of an ancient seat of learning? Whether anybody actually enjoys such a licence granted by the Vice-Chancellor, I do not know; but every antiquary can see the charm of the notion of the Vice-Chancellor having power to frustrate a mere Licensing Committee of Magistrates and flooding us with licences to sell wine. Whether those who complain would wish to see Proctors once more measuring butter and taking the content of pots, pints, and quarts, I cannot guess. Most Proctors, I expect, would claim they had plenty else to do. But how it would add to the picturesqueness of this steadily more modern town with its four hundred motor cars and cycles run by persons *in statu pupillari*, to see the Proctor in his cassock (revived for his benefit) remonstrating with a stallholder on the market who elected to sell butter by the kilogram instead of the yard!

Deplorably lacking as we are in all the fine old flavours that once made Cambridge Cantabrigian, some people still believe in us and give us gifts which make for efficiency. Lord Esher has offered to convey to the

Benefactions.

University for the use of the Arthur Balfour Professorship of Genetics, "the message, land, and hereditaments" in Storey's Way (to be known as Whittingehame Lodge) which are at present his property and Mr. Balfour's. The Museum of Archaeology and Ethnology has received from Sir Arthur Evans a collection of one hundred and twenty-one specimens of celts and spear-heads, Roman enamelled brooches, medieval badges, finger rings, buckles, and other things, all found in Cambridgeshire and the neighbouring counties. Finally, studentships are being created by the King Edward VII British-German Foundation to enable young Englishmen to study in Germany, and our own students are to be eligible.

All sorts of interesting people are coming to lecture and speak to us—Miss Malecka, Mr. Lloyd George, and so on—and the theatre is to give us no end of "Girls"—

Fixtures, &c.

"The Girl in the Something," "The Girl at the Something Else," and "The Girl from Somewhere Irrelevant"—your readers will know these masterpieces. Q. is become quite an institution, but I need not mention that; are not his lectures reported in the London press? Rumour says the General Board is worried about the difficulty of finding seats at his lectures amid the hordes of non-academic and non-paying guests.

Mr. Pollock has resigned the Secretaryship of the Lodging House Syndicate and been succeeded by Mr. Rushmore in his difficult and most responsible duties. Landladies and their handmaids and children in every variety of permutation and combination—what a vista of human problems to be solved by a mere don! and how much depends on it!

CAMBRIDGE TRAINING COLLEGE FOR WOMEN.—Nine students passed the examination held last December by the Cambridge Syndicate in the Theory and Practice of Teaching, six being placed in the Second Class and three in the Third Class. Nineteen students have entered the College this term, all of whom have graduated at a University—thirteen in London (four with First Class Honours), two in Dublin (both with First Class Honours), one at Cambridge, one at Aberdeen, one at St. Andrews, and one at Belfast. This makes the total number in residence forty-one. Scholarships or Bursaries for January have been awarded to: Miss A. I. G. Hewitt, B.A. Lond., Class II; Miss E. E. Hurt, B.A. Lond., Class I; Miss M. E. Johnson, B.Sc. Lond.; Miss K. M. Linton, B.A. T.C.D., Class I; Miss G. A. Moore, B.A. Lond., Class II; Miss R. E. Pugsley, B.A. Lond., L.R.A.M.; Miss D. M. Young, Mod. Lang. Tripos.

WALES.

The Circular of the Department on the Celebration of St. David's Day is noticed elsewhere. The average Welsh schoolboy's ignorance of his country's history is very often pretty complete. But by concentrating on certain stirring incidents in the lives of famous Welshmen, and by recalling great deeds of the past, much may be done to dispel this ignorance, which is all to the good. The *Pall Mall Gazette*, however, regards the Circular as a dangerous political document full of wild separatist ideas! The writer thinks that the curriculum seems to be guided by a jealous exclusion of anything suggesting that Welshmen have ties beyond the borders of the Principality, or that they owe any loyalty that is not purely provincial! The critic must have developed very confused ideas as to the mean-

ing of "nationality" and "patriotism," or he would not have written such nonsense.

Elementary Education.

The recent Circular issued by the Board of Education entitled "Tabular Statement of Staffing," &c., must provide some of our Welsh Education Authorities with uncomfortable reflections on their neglect of their duty to the public. The proportion of unqualified assistants per thousand pupils is in some Welsh counties extraordinarily high; and until it is remedied Wales, as regards its system of elementary education, must be regarded as the most unprogressive in the British Isles. Cardiganshire is the most backward of all the counties. There we find that there are five supplementary and seven uncertificated assistants to every one certificated assistant. Radnor is not much better, with four supplementary and three uncertificated teachers to every one qualified assistant. The figures for Cardigan (per thousand pupils) are 2.6 certificated assistants, 18.1 uncertificated assistants, and 12.7 supplementary, while the average for the Welsh counties is only slightly more satisfactory. The respective numbers for the whole of Wales are 6.8 certificated, 14.8 uncertificated assistants, and 6.6 supplementary teachers. Barry's figures are about the best in England and Wales, with its proportion of 31.2 certificated assistants to 4.8 uncertificated. In the matter of salaries also Cardigan and Merioneth are the lowest in the whole country. They receive £107 and £84 per annum when they are certificated—salaries which cannot possibly be described as adequate or just.

The bearing of these statistics on the efficiency of the intermediate schools is obvious. It means that the schools are compelled to do a great deal of elementary work which should have been done thoroughly and satisfactorily in the elementary schools, but as long as the primary schools are swamped by untrained teachers, no other course is possible.

The Governors of the National Library have arranged to deposit small collections of books at those centres where classes under the auspices of the Workers' Educational Association are held. These places include Towyn, Barmouth, Llanberis, &c.

The Swansea Education Authority has been agitated by being called upon to express opinions on two questions which have a perennial interest in Wales. In the first the local Cymrodorion Society sent a deputation urging the Council to make Welsh a compulsory subject in the elementary schools, and we had a restatement of the familiar arguments. The debate that followed naturally proceeded along the usual lines, for it is clearly beyond the wit of man to devise new arguments bearing upon this question. Opinion was so divided that no step has been taken. Then the local employers of office boys at sweating wages have been complaining that the products of the elementary schools whose services they manage to secure are not above suspicion in spelling and arithmetic. They made a vigorous onslaught on the whole system of elementary education. To pacify them a conference was held, which ended as usual—in nothing but talk.

Some twenty years ago Lord Merthyr, one of our greatest coal magnates, established a scholarship scheme to encourage miners to acquire some technical training in the higher branches of their calling. Ever since the question of the proper equipment of mining students has been carefully considered, and at last a well-equipped Mining School has been opened at Treforest in the Rhondda Valley. The course at Treforest will occupy three years, but the most proficient students will be encouraged to enter Cardiff University College for a fourth year course, and the School will endow five studentships of £50 a year each for that purpose. The scheme further provides for the devotion of £9,000 to the University College for the improvement of the facilities for mining instruction there. It is also proposed to extend the scheme by establishing more mining schools in West Wales. Most probably one will be found in connexion with the Swansea Technical College. The Miners' Federation are, however, opposing the scheme on the ground that it is dependent on private and not on public enterprise. But unfortunately our Public Authorities have shown no desire or intention of proceeding in the matter, and it was not until the Coal Owners' Association seriously considered it that any progress whatever was made towards the better education of the miner, on whom the prosperity of South Wales so largely depends.

SCOTLAND.

Principal Sir Donald MacAlister has now recovered so far from his long illness that he has been able to preside at one or two meetings held in his own house. He will, however, be unable for some time to

'DUSMO'
The Dustless Sweeping Powder

Contains No Oil or
Grease, Destroys
Germs, Scours the Floor,
and Saves Scrubbing.

The removal of dust
prevents the spread of
infection. — Keep your
School healthy by the
use of 'DUSMO.'

**PRACTICAL.
EFFICIENT.
ECONOMICAL.**

'DUSMO' can be used any and every day of
Term. The Schoolroom is available immediately ;
there is no tedious drying or 'dusting' to wait for.

'Dusmo' is the cleanest, quickest, and most economical sweeping powder for effectively freeing your school from dust. *Dust simply can't exist where 'Dusmo' is used.* It is manufactured in two forms—'Dusmo' for use on carpets, and 'Dusmo' 'B' especially prepared for use on wood, linoleum, stone or marble floors. 'Dusmo' contains no oil or grease, and is disinfectant.

**DUST CANNOT RISE.
THE FLOOR IS SCOURED.
RESULT: A CLEAN SWEEP.**

The 'Dusmo' method *absolutely* prevents the dust from rising and removes it. When the accumulated dust has been absorbed the quantity of 'Dusmo' used daily is very small, and the cost would be even *cheaper than sawdust*. The old method of using water or damp sawdust coagulates the dust, leaving it sticking to the floor to return to dust again when dry.

DUSMO COMPANY, LTD.,

**11 QUEEN VICTORIA ST.,
LONDON, E.C.**

resume his regular work, and he has in the meantime gone to the south of England. Mr. A. J. Balfour has delivered the greater part of his first course of Gifford lectures. He has not given them a title; but their subject is a study of the grounds of theism on the basis of what he describes as "inevitable beliefs." His audiences have been very large—the Bute Hall, which holds about twelve hundred people, being crowded on every occasion. The attracting force has doubtless been the personality of the lecturer rather than any strong impulse to the study of natural theology. At the monthly meeting of the University Court one of the Town Council representatives, whose term of office has expired, made a long speech about University affairs, in course of which he made statements about the standard of work of the students, the qualifications of the Carnegie students, the inclusive fee, and the accommodation of the Faculty of Arts, which showed that he had either failed to comprehend or misunderstood the actual work and life of the University. His speech was an innovation, and it is to be hoped that his successors will not regard it as a precedent. Mr. Matthew W. Robieson, M.A., Assistant to the Professor of Moral Philosophy, has been appointed Lecturer in Moral Philosophy and History of Philosophy at Queen's University, Belfast. The Shaw Fellowship in Mental Philosophy, open to graduates of the four Universities who took their degrees during the last five years, has been awarded to Mr. George A. Johnston, M.A., a graduate of Glasgow with First Class Honours in Philosophy and in Classics. The two candidates next in order were also graduates of Glasgow. Mr. Johnston is Assistant in Moral Philosophy at St. Andrews. The annual Statistical Report of the University shows that during the last academic year the teaching staff consisted of thirty-five professors, sixty lecturers, and eighty-eight assistants and demonstrators. Six members of the junior staff were appointed to professorships in other Universities and colleges, including Reading, Princeton, Sydney, Western Australia, Wigan, and Calcutta. The number of matriculated students was 2,835, including 648 women, as compared with 2,794, including 681 women, in the previous year. There were 1,231 students (including 502 women) in Arts, 492 (including 44 women) in Science, 57 in Theology, 717 (including 87 women) in Medicine, and 204 (including 1 woman) in Law. The number of degrees conferred was 535, as compared with 481 in the previous year. About one-fifth of the Arts graduates took an Honours degree. The number of members of the General Council is now 8,914. The late Miss Mary J. Murray

has bequeathed one-third of the residue of her estate to the University for the purpose of founding scholarships at Queen Margaret College for women students of Arts or Science who intend to become teachers. The amount of the bequest will probably be £3,000 or £4,000.

The University has suffered a very great loss in the death of its Chancellor, Lord Strathcona, who took a deep interest in its work and made benefactions to it amounting in all to about £35,000. At a meeting

of the University Court it was intimated that investments had been received from the Carnegie Trust for sums amounting to over £32,000, which have accrued during the last ten years, for the endowment of lectureships in political economy, German, education, and constitutional law and history.

The University Court, after consultation with the Senatus, has agreed to grant a diploma in education and to institute a post-graduate degree in education. A committee has been appointed to draft an Ordinance providing for the degree. The University has also resolved to alter the date of the Bursary Examination from September to June or July. The change, which will give great satisfaction to teachers, cannot, however, take place until 1915. Some years ago Glasgow University changed its date to June, and for many years the Aberdeen examination has been in March. St. Andrews has also promoted an Ordinance to enable a similar change to be made. The annual report of the University shows that during the last academic year the number of matriculated students was 3,261 (including 549 women). There were 1,200 students (including 506 women) in Arts, 412 (including 26 women) in Science, 60 in Divinity, 254 (including 1 woman) in Law, 1,315 in Medicine, and 20 (including 16 women) in Music. 641 degrees were conferred. The number of members of the General Council is 12,288, of whom over 1,100 are women graduates. Prof. Henri Bergson is to deliver his first course of Gifford Lectures in the summer term of this year. His subject is "Le Problème de la Personnalité."

The report of the St. Andrews Provincial Committee states that 220 students (of whom 166 are women) have been in training during the year at St. Andrews and Dundee. Sixteen of the students were graduates

Provincial
Committee.

LONDON: WILLIAM RICE, 8 BROADWAY, LUDGATE HILL, E.C.

and fifty-nine were taking a University course. It is expected that the new training college and demonstration school will be completed at the end of the summer of 1915.

The annual Congress of the Educational Institute of Scotland was held at Aberdeen in the last three days of January. The President, Miss Fish, devoted her address to the question of teachers' salaries. She gave figures showing that more than two-thirds of the assistant masters in schools of all grades had salaries of less than £150 a year, and that less than 1 per cent. received salaries of £250 or more. Of the head masters, a little more than one-third receive salaries of more than £200, and only eighty-four receive as much as £400. In moving a resolution in favour of larger administrative areas for School Boards, Mr. Robert Dickson, M.A. Edin., pointed out that it took nine hundred School Boards to look after the education of one-half of the population, and only about fifty to look after the other half. In Aberdeenshire ninety School Boards with five hundred members looked after the rural districts, while one Board with fifteen members administered the City area with an equal population. This meant an enormous waste of money in the cost of administration. In Aberdeenshire the cost was 6 per cent. of the rates, and the total cost for the whole country was £132,000 a year. Resolutions were also adopted (a) in favour of increased Government grants; (b) protesting against the character of the Junior Student Course, which necessitates the continuous study of at least ten subjects throughout the course, while the secondary pupil has to study only four subjects; (c) in favour of a post-graduate degree in education; and (d) in favour of increased facilities for higher education in rural schools. Special addresses were also given by Mr. T. B. Morison, the Solicitor-General, on "The Teachers' Contract"; by Prof. J. Arthur Thomson on "Nature and Nurture"; and by the Rev. W. Main on "Continuation Classes." Mr. Main stated that since 1908 the number of continuation class centres had increased from 755 to 1,152, and the number of students in attendance from about 109,000 to about 145,000. Nevertheless, at present considerably less than 50 per cent. of the population between fourteen and seventeen years of age, and less than 25 per cent. of those between fourteen and twenty years of age, are under systematic instruction of any kind. The majority of the pupils attending continuation classes are doing so for one year only, instead of following an organized course for two or three years. Eighteen

School Boards have prepared by-laws for putting into operation the compulsory clauses of the Act of 1908. But Mr. Main regarded a general system of compulsion for evening classes as impracticable and undesirable, and suggested an alternative scheme (to be carried out with the goodwill of employers) by which boys and girls would attend day classes for four hours a week as part of their working day and without loss of wages, and in addition would attend classes for two hours in one evening a week.

The Edinburgh School Board has provided at Milton House School, Canongate, a set of workshops for the use of continuation classes in bookbinding, woodwork, stationery binding, and cookery, with a gymnasium in addition. The object of the Board is to develop technical instruction in the district in which the workshops are situated.

The Corporation of Glasgow has for some years organized a drawing competition, open to the pupils of Glasgow schools, the competitors having to select as the subject of their work any of the objects in the Corporation Art Galleries and Museums. The competitors are entirely unaided both in choice of subject and in manner of execution. The judges report that the work done has been of a high standard, that its excellence has steadily increased, and that, so far as the experience and knowledge of the judges goes, the children are producing work which is not excelled by that produced in any other city in the United Kingdom or abroad.

IRELAND.

Mr. Matthew W. Robieson, of Glasgow University, has been appointed to the Lectureship in Philosophy in Queen's University, rendered vacant by the selection of Mr. H. L. Stewart as Professor of Philosophy at Dalhousie University, Nova Scotia.

The Executive Council of the Association of Secondary Teachers held its annual meeting for election of officers and adoption of report in Dublin on January 10. The report was mainly confined to the negotiations carried on during the past year with Mr. Birrell and the head masters concerning the £40,000 grant and the *status in quo* of the

(Continued on page 126.)

For the new Term's Work In English.

A NEW ENGLISH GRAMMAR.

THE PRACTICE OF ENGLISH

(Being Book II of the English Edition of "THE MOTHER TONGUE").

Edited by J. W. ADAMSON, Professor of Education in the University of London, and A. A. COCK, Lecturer in Education in King's College, London.

363 pages. Price two shillings and sixpence.

An edition in three parts is in active preparation.

This volume contains a complete course in composition and such grammar as is necessary for the more advanced practice of the mother tongue. A special feature is the adoption of the principal recommendations of the recent Report on Grammatical Terminology, published through the English Association.

The exercises in composition are also designed to serve as an introduction to literary appreciation and criticism. For the purposes of these exercises the book is well provided with examples of standard prose and poetry.

The first part deals chiefly with narration and the auxiliary grammar; the second with description and its necessary grammar; while the third part is devoted to exposition and criticism, the rest of the grammar, and an appendix on prosody. The work also contains a short prefatory essay on the use of the book.

LESSONS IN SPEAKING, READING, AND WRITING ENGLISH.

(Book I of the English Edition of "The Mother Tongue").

Revised by JOHN W. ADAMSON, B.A., Professor of Education in the University of London.

306 pages. Illustrated. Price one shilling and sixpence.

IN PARTS FOR USE IN THE LOWER FORMS.

In response to repeated requests from heads of schools all over the kingdom, the publishers have much pleasure in announcing that they now issue this well-known book in a style more suited to the needs of the pupils in the lower forms.

The book is divided as follows:—Part I. 106 pages. 6d. Part II. 92 pages. 6d. Part III. 154 pages. 9d.

Each part contains numerous exercises—both written and oral—to help the pupil to speak and write his mother tongue; and passages of simple prose and poetry, chosen from standard authors, for reading and memorizing. There is nothing cheap about these books except the price. They are printed from the same clear type on equally good paper as the complete book. They contain the same illustrations and are strongly and attractively bound.

Complete Catalogue post free on application. Books sent on approval to Teachers.

question. The Association, which claims to represent the majority of the lay teachers in Ireland, considers that "Mr. Birrell's conditions are a compromise between the interests of the head masters and those of the lay teachers, but a compromise very largely in favour of the former," but is willing to admit compromise to secure the grant—and there can be no doubt that in this later object the lay teachers are at one with it.

On the other hand, Dr. O'Dwyer, in a public speech delivered in the course of last month, emphatically repudiated the grant unless the conditions, at any rate that requiring a fixed percentage of lay teachers, were altered. "There are, and always will be, a certain number of lay teachers [in Catholic schools], but they are comparatively few, and whoever attempts to deal with Irish education should keep that fact before his mind. The Catholic people of Ireland will never tolerate any interference by Government with religious teachers in the supposed interest of lay teachers." Perhaps this is a question on which the final opinion of the Catholic laity of Ireland has not yet been formulated.

The Commissioners of National Education in their seventy-ninth report, for the school year 1912-13, state that the attendance during the year 1912 showed a slight falling off, which they ascribe to the weather conditions of that year. The percentage of the average daily attendance to the average number of pupils on the rolls was 71.3-73.1 in districts where there were School Attendance Committees, 68.3 in the remainder. The Commissioners defend themselves against the charge, sometimes brought against them, of returning money to the Treasury which might have been expended usefully. They explain that their estimate for the Parliamentary vote for Irish primary education has to be submitted to the Treasury four months before the financial year for which it is intended commences, and that there is serious difficulty in obtaining money subsequently for unforeseen purposes by a supplemental vote. The sum voted, therefore, represents the maximum amount upon which they are entitled to draw, and it cannot be expended at discretion, but must be applied to the purposes stated in the estimate and sanctioned by the Treasury, any surplus being retained by the Exchequer. The Treasury grant for medical inspection for the year 1913-14 is limited to £5,000, conditional on local contributions, and it is estimated that about £1,300 of this sum will be retained for schemes of dental treatment which the Board has sanctioned. Five dental clinics are being established in Dublin and the vicinity, and one each in Cork, Antrim, and Naas. Another to be sanctioned was started in Belfast last April; in it the services of doctors and dentists are given free, their value being treated as a local contribution earning an equivalent amount from the Parliamentary grant. The Bangor Urban District Council has initiated a scheme embracing all the schools in the urban district. Other schemes owe their inception to private enterprise; for instance, the clinics started by Viscount Gough in Co. Galway, and those instituted at Bushmills through the instrumentality of the Provost of Trinity College.

The Commissioners complain with some bitterness that their schemes for higher primary or continuation schools have been frustrated through the refusal of the Treasury to grant money for the purpose; and contrast the treatment of Ireland in this respect with that of Scotland, where it is estimated that the proportion of children who take a real course of higher instruction is one to six or seven. The proportion in Ireland, were the precise figures available, would certainly not be found to exceed one to thirty. In the matter of school-gardening, however, the Treasury has shown itself more liberal, and new developments are contemplated in this direction.

The Irish educational world has lost more than one prominent figure during the month. M. Edouard Cadic de la Champignonnerie, who died on January 10, had worked in Irish education for the past thirty years and had received for his services in promoting French instruction in this country the distinction of Officier d'Académie from the French Republic. M. Cadic was for many years on the teaching staff of Alexandra College and University College, was a Fellow of the Royal University, and on the foundation of the National University became its first Professor of French. He is regretted by a large number of friends and past pupils.

Dr. Patrick Joyce, who died on January 7, was from 1845 to 1893 in the service of the Board of National Education, and for many years of that time Principal of the Marlborough Street Training College. Dr. Joyce, however, was better known to the world at large through his interesting as well as learned works on Irish language and archæology, notably his "Social History of Ireland," and his book on "The Origin and History of the Irish Names of Places." His charming "Old Celtic Romances" introduced many readers to the world of Irish legend, and his histories of Ireland are standard textbooks in Irish schools.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS.

MESSRS. GABBITAS, THRING & CO. have a large number of GIRLS' SCHOOLS on the books of their Transfer Department, but **ISSUE NO LIST**. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are a few of the Schools now on their books:—

IN AND NEAR LONDON.

No. 4,863. **PARTNERSHIP** in, or **TRANSFER** of, **FIRST RATE SCHOOL FOR BOARDERS AND DAY PUPILS**, in a pleasant residential locality. Good House with 13 acres. Accommodation for 45 Boarders. **NEARLY FULL** as to Boarders, and a good attendance of Day Pupils. Prospectus fees for Boarders 90 to 120 guineas. Gross receipts well over £6,000.

No. 4,694. **TRANSFER** of **PROFITABLE BOARDING AND DAY SCHOOL** in healthy residential locality. Grounds of 4 or 5 acres. About 15 Boarders and 25 Day Pupils. Prospectus fees from £75 to £94 10s., and from £12 12s. to £22 1s. respectively. Good Continental connexion. Gross receipts about £2,500, and profits £500. Goodwill £1,250.

IN THE SOUTH OF ENGLAND.

No. 5,319. **DAY** connexion in the Home Counties, suitable for a **LADY WITH NAVAL OR MILITARY CONNEXION**. Vendors moving to a different part of the country and taking Boarders only for the future. About 20 Day Pupils. The only School strictly for **GENTLEMEN'S DAUGHTERS** in the locality. Receipts from Day Pupils nearly £400. Goodwill £150.

No. 5,312. **TRANSFER** or **PARTNERSHIP**, with a view to succession, of old-established and very **SUCCESSFUL SCHOOL** for the daughters of professional men, Boarders only, at a **SOUTH-EAST COAST RESORT**. About 35 Pupils, at fees of 70 to 80 guineas. **PRACTICALLY FULL**. **PREMISES** specially erected for the School. Gross receipts over £2,700, and net profits over £450. **BOTH INCREASING**. For goodwill, furniture, and equipment about £2,000. Premises would be let.

No. 5,297. **TRANSFER** of old-established and successful **BOARDING AND DAY SCHOOL** at South Coast resort, containing about 20 Boarders and 10 Day Pupils. Prospectus fees for Boarders 75 to 90 guineas, excepting for Foreign

IN THE SOUTH OF ENGLAND—continued.

Boarders at 10 guineas per month. **GOOD FOREIGN CONNEXION**. Gross receipts for last 12 months nearly £3,000, showing **INCREASE** on average of last 3 years. **PROFITS ALSO INCREASING** nearly £500. Goodwill £1,100.

No. 5,296. **TRANSFER** of large and successful **BOARDING AND DAY SCHOOL** for Gentlemen's Daughters, at South Coast resort, containing about 30 Boarders and 50 Day Pupils. Prospectus fees 75 to 85 and 12 to 24 guineas respectively. **NUMBERS STEADILY MAINTAINED**. Gross receipts over £2,500. Profits about £500, which would be **LARGELY INCREASED** by incorporation of Junior House. Goodwill £1,500.

No. 5,287. **TRANSFER** of **FLOURISHING BOARDING AND DAY SCHOOL** in an **IMPROVING RESIDENTIAL DISTRICT**, on the outskirts of a healthy seaside town, containing nearly 20 Boarders and 40 Day Pupils and Day Boarders. Prospectus fees respectively 45 to 75 and 12 to 18 guineas per annum. Day Boarders pay 9 guineas in addition. Gross receipts over £1,800, and profits over £400. Goodwill £900.

No. 4,890. **TRANSFER** or **PARTNERSHIP**. Old-established School for Gentlemen's Daughters, at a South Coast Resort, with **BRANCH** at another Seaside Resort **SHORTLY TO BE ESTABLISHED**. Now **FULL**, with about 60 Boarders. Fees of 60 to 75 guineas. Receipts over £4,000, and profits over £1,200. Both **CONSIDERABLY INCREASING**. Goodwill of the whole, £2,000.

IN THE NORTH AND MIDLANDS.

No. 5,317. **OLD-ESTABLISHED** and **VERY PROFITABLE** Boarding and Day School, with Kindergarten, in Suburb of North Midland City. House specially constructed for the School. About 25 Boarders and 55 Day Pupils. Prospectus fees 60 guineas, and from 3 to 15 guineas. Gross receipts about £1,500. **STEADY ANNUAL PROFIT** of about £600. Goodwill £700.

In the NORTH AND MIDLANDS—continued.

No. 5,316. **TRANSFER** or **PARTNERSHIP** with a view to succession. **MIDDLE CLASS BOARDING AND DAY SCHOOL** in Midland County Town, containing nearly 10 Boarders and 70 Day Pupils. Fees from £30 to £40, and from £3 3s. to £10 10s. Gross receipts nearly £700. Goodwill of whole £300, or capitation fee.

No. 5,304. **TRANSFER** of good-class small **MIXED PREPARATORY DAY SCHOOL** and Kindergarten at a residential locality near a Midland city, containing nearly 20 Pupils. Profit about £100. Goodwill £100.

No. 5,303. **TRANSFER** of Upper Middle-class Day and Boarding School at an **EAST COAST RESORT**, containing about 10 Boarders and 20 Day Pupils. Prospectus fees from £30 to £60, and £6 6s. to £15 15s. per annum. Gross receipts over £800, and profits over £300. Goodwill £500.

ON THE CONTINENT.

No. 5,314. **TRANSFER** or **PARTNERSHIP** in **EDUCATIONAL HOME OF THE HIGHEST CLASS** on the Continent. **BEAUTIFUL DETACHED HOUSE AND GROUNDS**. Usually 6 or 8 Pupils finishing their education. Fees from £150 to £180 per annum. The **HIGHEST REFERENCES** in this Country and on the Continent.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require full particulars before arranging introductions to their clients. No charge is made to Purchasers.

A prize of £70 offered by the Educational Council of the Presbyterian Church in Ireland for the best Irish History suitable for schools, and open to all competitors, has been won by Miss Constantia Maxwell, Lecturer on History in Trinity College.
[Part of Irish Letter is held over.]

PRIZE COMPETITIONS.

The Translation Prize for January is awarded to "Lavengro."

Miss E. H. Wishaw's name should have appeared as the winner of the prize for October.

Will "Gradatim" be so kind as to send again her name and address?

The winner of the Translation Prize for December is Dr. R. L. Batterbury, Berkhamsted.

Shaftesbury, den ich nur zu nennen brauche, um jedem Gebildeten einen trefflichen Denker ins Gedächtnis zu rufen, Shaftesbury lebte zu einer Zeit, wo in der Religion seines Vaterlandes manche Bewegung vorging, wo die herrschende Kirche mit Gewalt die Andersgesinnten zu bezähmen dachte. Auch den Staat, die Sitten bedrohte manches, was einen Verständigen, Wohldenkenden in Sorge setzen muss. Gegen alles dieses, glaubte er, sei am besten durch Frohsinn zu wirken; nur das, was man mit Heiterkeit ansehe, werde man recht sehn, war seine Meinung. Wer mit Heiterkeit in seinen eigenen Busen schauen könne, müsse ein guter Mann sein. Darauf komme alles an, und alles übrige Gute entspringe daher. Geist, Witz, Humor seien die echten Organe, womit ein solches Gemüt die Welt anfasse. Alle Gegenstände, selbst die ernstesten, müssten eine solche Klarheit und Freiheit vertragen, wenn sie nicht mit einer nur anmasslichen Würde prunkten, sondern einen echten, die Probe nicht scheuenden Wert in sich selbst enthielten. Bei diesem geistreichen Versuch, die Gegenstände zu gewältigen, konnte man nicht umhin, sich nach entscheidenden Behörden umzusehn, und so ward einerseits der

Menschenverstand über den Inhalt, und der Geschmack über die Art des Vortrags zum Richter gesetzt.

An einem solchen Manne fand nun unser Wieland nicht einen Vorgänger, dem er folgen, nicht einen Genossen, mit dem er arbeiten sollte, sondern einen wahrhaften älteren Zwillingsbruder im Geiste, dem er vollkommen glich, ohne nach ihm gebildet zu sein: wie man denn von Menächmen nicht sagen könnte, welcher das Original, und welcher die Kopie sei.

By "LAVENGRO."

Shaftesbury—I need only name him, to call to the recollection of every cultivated person an excellent thinker—lived at a period when there reigned great unrest in the religion of his country, and the Church, which was in power, had it in mind to subjugate with brute force those who differed from her in opinion. Moreover, the state and public morals were threatened with many dangers, which could not fail to cause deep concern to a reasonable and right-minded man. To oppose all this a cheerful spirit, according to his view, was the prime necessity; he considered that a true vision was only possible when the eye of the seer was serene. He who could gaze with serenity into his own heart must be a good man. Everything depended on that, and all other good things had their source therein. Intelligence, wit, humour were the real instruments with which one so constituted got his grip on the world. All subjects, even the most solemn, must of necessity admit of such an enlightened and independent treatment, if they contained within themselves a kernel of genuine worth that did not shrink from the ordeal of proof, and were not tricked out with a merely assumed dignity. In this intelligent attempt thoroughly to master his subject it was inevitable that he should look out for some decisive standards of criticism: and thus it came about that, as regards the matter of his exposition, he set up reason; as regards the manner, taste, as the final arbiter.

In such a man then our Wieland found—not merely a predecessor to follow, nor a companion to be his fellow-worker—but a true elder brother in the spirit, whom he resembled completely without being modelled on his pattern; just as the case of the Menaechmi it was impossible to say which was the original and which the copy.

(Continued on page 130.)

HORACE MARSHALL & SON

THE NEW LATIN DELECTUS. By W. JENKYN THOMAS, M.A., Head Master of the Hackney Downs School, and E. P. DOUGHTY, M.A., Assistant Master at the Hackney Downs School. Part I. Price 1s. 6d. Part II. Price 2s. 6d. Beautifully Illustrated.

This Delectus is intended for the earlier reading of boys and girls who learn Latin, especially in schools with a leaving age of about sixteen. The contents of the two books which form the Delectus have been selected with a view to the better appreciation of English Literature. The earlier part consists of simplified Livy, graduated in difficulty, together with some Eutropius, to illustrate Macaulay's *Lays of Ancient Rome*. It is followed by extracts relating to the gods, and a systematized presentation, so far as it is possible through the medium of Latin, of the Greek myths which have most influenced English Literature. A vocabulary is appended to each book, in which French derivatives are given, and both volumes are beautifully illustrated.

RECITATIONS ET POÉSIES. With Phonetic Transcript. Edited by VIOLET PARTINGTON, French Mistress at the Queen's College School. With over Sixty Charming Pictures. Price 2s.

This is a collection of simple French Poetry and Rhymes for beginners.

LES DEUX FEES AND OTHER FRENCH PLAYS FOR LITTLE CHILDREN. By VIOLET PARTINGTON. In Decorated Paper Cover. 9d. This little book contains five short French Plays, suitable for acting by young children.

DANS LE ROYAUME DES FEES. A Second Series of French Plays. By VIOLET PARTINGTON. In Decorated Paper Cover. 9d.

The Journal of Education says:—"We can quite believe that the pupils who have acted in these plays have acquired a command of French phrases and idiom almost without effort."

LITTLE FRENCH FOLK. By C. T. ONIONS, M.A., Author of *English Syntax*. Price 2s. *Secondary Education* says:—"We know no better book for beginners in French."

DEUTSCHE SAGEN. Edited by MARGUERITE NINET. Price 1s. 6d. This reading book in German, adapted for pupils in their third year, contains four charming stories, based on mediaeval legends. They are prettily illustrated, and form a very attractive reading book.

ENGLISH: A Modern Grammar. By G. H. CLARKE, M.A., and G. T. UNGER, M.A., of the County School, Acton.

This work is an attempt to embody the results of recent studies in the grammar of modern English. As it sets forth usage and principles rather than precept and rule, it is hoped that it will be found useful in middle and upper forms. Numerous examples and exercises are provided throughout. Price 2s. 6d.

Prospectus post free.

LONDON: TEMPLE HOUSE, E.C., & 125 FLEET ST., E.C.

IMPORTANT NEW BOOKS.

Mr. HEINEMANN will publish early in February the following books of the greatest importance to every Teacher and Student of Education.

Dr. Montessori's Own Handbook.

A Manual for Teachers and Parents.

By DR. MARIA MONTESSORI, Author of "The Montessori Method of Child Education," &c.

Crown 8vo. Illustrated. Price 3s. 6d. net.

In this book, which is intended as a supplement to the larger book on her method, Dr. Montessori explains the system which is now taking its place in so many Schools, and describes the various implements she has invented to train the minds and bodies of children. It will be valuable to all teachers and for every mother who has the wisdom to use Dr. Montessori's wonderful plan in educating her child.

The Chassevant Method of Musical Education.

Adapted by MARIAN P. GIBB.

Guide to the Chassevant Method. Crown 8vo, 3s. 6d. net.

1st Solfège. Oblong 4to, 1s. 9d.

2nd Solfège. " " 2s. 6d.

3rd Solfège. " " 3s.

Mademoiselle Chassevant, who has been called "a Musical Montessori," is a teacher in the Geneva Conservatoire, who, after years of experience, has evolved a wonderful method of musical education in its widest sense. The results already obtained by the use of this method are extraordinary, and there is little doubt but that it is destined to exercise an important influence on music-teaching in this country.

Full Explanatory Prospectus on application.

LONDON: WM. HEINEMANN, 20 & 21 Bedford Street, W.C.

Fifth Class.—A.M.N., Norris, Gloria, Charlie, Quasi, S.R., Gollie, T.A.P., J.M., Ashley, Ave, Collin, Mouse.

The extract from Goethe was not too hard to have been set in the Higher Locals. The "Menaechmi" of Plautus puzzled many, but it should be familiar to most from Shakespeare's "Comedy of Errors," or they might have found it in Brewer's "Phrase and Fable." *Den Staat, die Sitten*: "Government and Morals." *Frohsinn*: "lightheartedness." *Heiterkeit*: "serenity" is the nearest equivalent, but the epithet "gay" is almost necessary to convey the German connotation of "joy and light." *Geist*, again, is hard to render; *esprit* would exactly express it, and "ready wit" might serve but that "wit" follows; we must be content with "intelligence." *Alle Gegenstände*: "all subjects, even the most solemn, must submit to this free and frank handling." *Bei diesem*: "this original endeavour to grasp and comprehend the whole world of thought necessitated the determination of the ultimate authorities."

A Prize of Two Guineas is offered for the best translation of the following passage from *Sainte Beuve*:—

Si on a contesté à Madame de Sévigné la naïveté de ses lettres, on ne lui a pas moins contesté la sincérité de son amour pour sa fille; et en cela on a encore oublié le temps où elle vivait, et

combien dans cette vie de luxe et de désœuvrement, les passions peuvent ressembler à des fantaisies, de même que les manies y deviennent souvent des passions. Elle idolâtrait sa fille et s'était de bonne heure établie dans le monde sur ce pied-là. Arnauld d'Andilly l'appelait à cet égard une *jolie païenne*. L'éloignement n'avait fait qu'exalter sa tendresse; elle n'avait guère autre chose à quoi penser; les questions, les compliments de tous ceux qu'elle voyait la ramenaient là-dessus; cette chère et presque unique affection de son cœur avait fini par être à la longue pour elle une contenance, dont elle avait besoin comme d'un éventail. D'ailleurs Madame de Sévigné était parfaitement sincère, ouverte, et ennemie des faux-semblants; c'est même à elle, une des premières, qu'on doit avoir dit une personne *vraie*; elle aurait inventé cette expression pour sa fille, si M. de la Rochefoucauld ne l'avait déjà trouvée pour Madame de La Fayette; elle se plaît du moins à l'appliquer à ce qu'elle aime. Quand on a bien analysé et retourné en cent façons cet inépuisable amour de mère, on en revient à l'avis et à l'explication de M. de Pomponne: "Il paraît que Madame de Sévigné aime passionnément Madame de Grignan? Savez-vous le dessous des cartes? C'est qu'elle l'aime passionnément." Ce serait en vérité se montrer ingrat que de chicaner Madame de Sévigné sur cette innocente et légitime passion à laquelle on est redevable de suivre pas à pas la femme la plus spirituelle, durant vingt-six années de la plus aimable époque de la plus aimable société française.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by February 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

These School and Teachers' Advertisements are continued from page 129.

HORLICK'S MALTED MILK

MALTED BARLEY, WHEAT, and MILK in Powder Form

The wholesome nutrition of pure rich milk and choice malted grain, supplying strength and vigour, with little tax on digestion. Instantly ready for use by stirring briskly in hot or cold water.

NO COOKING REQUIRED.

Equally useful to both

TEACHERS AND SCHOLARS.

A glass of "Horlick's" is an ideal lunch, as a delicious and nourishing food-drink may be easily prepared in a moment. **Keep a bottle in your desk.** Horlick's Malted Milk will be found to supply the strength and energy so necessary during the long hours of study, and its use will prevent lassitude.

An efficient corrective of insomnia, taken hot before retiring.

HORLICK'S MALTED MILK LUNCH TABLETS.

A delicious food confection, to be dissolved in the mouth. Especially useful during study for exams.

In Glass Bottles, 1/6, 2/6, 11/-, at all Chemists and Stores. Liberal Sample, either in Powder or Tablet Form, for trial free by post on request.

HORLICK'S MALTED MILK CO., SLOUGH, BUCKS.

CAMBRIDGESHIRE EDUCATION COMMITTEE.

CAMBRIDGE AND COUNTY SCHOOL FOR GIRLS.

A MISTRESS is required for Modern Languages, chiefly French. She may be required to help with other subjects. Duties to begin in April, 1914. A degree, or its equivalent and good secondary school experience are essential. Candidates who have been abroad will be preferred, other things being equal. Salary £130 a year (non-resident), or according to experience and qualifications.

Forms of application, which can be obtained of the undersigned, must be returned on or before the 18th February, 1914.

AUSTIN KEEN, M.A.,
Education Secretary.

County Hall,
Cambridge.

WEYMOUTH SECONDARY SCHOOL.—Wanted, after Easter, FORM MASTER. Essential subjects: Art and General Form Work. Experience and qualifications in Woodwork, Physical Drill, French, English, or History a further recommendation. Salary £120 by £5 per an. to £160, but previous experience will be considered in fixing the initial salary. Applications giving full particulars with dates to be sent to the HEAD MASTER.

TYPEWRITING (Certificated).—

Testimonials, 6d. per dozen copies; MSS., 8d. per 1,000 words. Promptitude and accuracy guaranteed. — DEXTER, 4 Gainsborough Road, North Finchley, London, N.

WANTED, in May, ART MISTRESS to teach pupils in all forms, and organize Handwork and Needlework. Experience and training in lower school work essential. Apply—HEAD MISTRESS, Girls' School, Newbury.

APPOINTMENT OF TWO ENGLISH MISTRESSES TO THE TRANSSVAAL

The Education Department of the Transvaal requires ENGLISH MISTRESSES for the Girls' High Schools at Pretoria and Johannesburg.

The appointments are to Grade A of the Transvaal Classification for High Schools, and the salaries are £330, rising by annual increments of £15 to £435 a year.

The qualifications required for Grade A posts are:—

- (1) University Degree, or other evidence of the necessary academic qualifications, and
- (2) The Transvaal Teachers' Second Class Certificate or other evidence of the necessary professional qualifications, and
- (3) Four years' experience, of which half at least must have been gained in Secondary Schools.

As the teachers may be called upon to assume general direction of the teaching of English in the Schools, it is essential that they should have had extensive and successful teaching experience. Candidates with qualifications in phonetics and elocution will be preferred.

Candidates should submit their applications in covers, marked C.A., to THE SECRETARY, Board of Education, Whitehall, London, S.W. Scottish Candidates should apply to THE SECRETARY, Scotch Education Department, Whitehall, London, S.W. The Candidate selected for Johannesburg will be required to take up duty as soon as can conveniently be arranged, and the candidate selected for Pretoria on or about the 10th April, 1914.

NEWCASTLE-UPON-TYNE EDUCATION COMMITTEE.

Wanted, for GIRLS' SECONDARY DAY SCHOOL, April 30th, a MISTRESS offering either (1) French and English for middle school work, or (2) good Mathematics.

Secondary School experience, with ability to take hockey, tennis, &c. desirable. Salary according to scale.

Application forms may be obtained by forwarding stamped, addressed envelope to the SECRETARY Education Office, Northumberland Road, Newcastle-upon-Tyne, and must be returned by February 16th.

COUNTY OF LONDON.

THE LONDON COUNTY COUNCIL

invites applications for the position of FULL TIME ART MISTRESS at the County Secondary School, Kentish Town. Salary £160 a year.

Applications must be on forms, to be obtained, with particulars of the appointment, by sending a stamped, addressed foolscap envelope to the EDUCATION OFFICER, London County Council Education Offices, Victoria Embankment, W.C., to whom they must be returned by 11 a.m. on Thursday, 12th February, 1914. Every communication must be marked H.4 on the envelope.

Canvassing, either directly or indirectly, will be held to be a disqualification for appointment. No candidate who is a relative of a member of the Advisory Sub-Committee of the school is eligible for appointment.

LAURENCE GOMME,

Clerk of the London County Council,
Education Offices,
Victoria Embankment, W.C.
24th December, 1913.

LONDON UNIVERSITY DEGREES

OPEN TO BOTH SEXES
WITHOUT CONDITIONS OF RESIDENCE

SOME SUCCESSSES

OF

University Correspondence College

FOR THE YEAR 1913:

AT MASTER OF ARTS 1913

19 of the 26 successful candidates were U.C.C. students, including ALL the M.A. List in Classics and ALL the M.A. List in French.

AT BACHELOR OF ARTS 1913

144 U.C.C. students passed, forming 60 per cent. of the Lists, and taking 55 of the 70 places in Modern Languages Honours.

AT BACHELOR OF SCIENCE 1913

88 U.C.C. students passed, taking 24 places in Honours.

AT BACHELOR OF DIVINITY 1913

14 out of the 21 successful candidates were U.C.C. students.

AT THE TEACHERS' DIPLOMA 1913

8 out of the 13 successful candidates were U.C.C. students.

During the last 10 years more than

**TEN THOUSAND
U.C.C. STUDENTS**

passed London University Examinations.

FREE GUIDES

to Matriculation, Inter. Arts, Inter. Science, B.A., B.Sc., &c., and full prospectus of Courses for London University Examinations post free from the Secretary

TEXT-BOOKS

FOR THE

**OXFORD & CAMBRIDGE SENIOR
LOCAL EXAMINATIONS.****LANGUAGES, HISTORY, AND
GEOGRAPHY.****A SENIOR COURSE OF ENGLISH COMPOSITION.**By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at
Luton Modern School. 2s. 6d.**SCHOOL HISTORY OF ENGLAND.** By M. E. CARTER,

Honour School of Modern History, Oxford. 3s. 6d.

This book is also published in three parts as follows:—

Part I.—To 1603. 1s. 6d. **Part II.—1485 to 1714.** 1s. 6d.**Part III.—1660 to 1910.** 1s. 6d.**EARLIER HISTORY OF ENGLAND (TO 1485).** WithBiographies, Maps, and Plans. By C. S. FEARENSIDE, M.A.
2s. 6d.**MODERN HISTORY OF ENGLAND.** With Biographies,

Maps, and Plans. By C. S. FEARENSIDE, M.A.

Part I.—From 1485 to 1714. 2s. 6d. **Part II.—From
1688 to 1901** (with a concise Introduction down to 1714). 2s. 6d.**SENIOR GEOGRAPHY FOR 1914-15.** Including Prin-ciples of Physical Geography, the British Isles, and Europe.
By G. C. FRY, M.Sc. 2s. 6d.**SENIOR FRENCH COURSE.** By Professor WEEKLEY,

M.A., and C. GILLI, B.A. 3s. 6d.

SENIOR FRENCH UNSEENS. By L. J. GARDINER,

M.A. 1s.

SENIOR FRENCH READER. With Notes and Vocabu-lary. By R. F. JAMES, B.A., French Master at Welling-
borough Grammar School. 2s. 6d.**SENIOR LATIN COURSE.** By A. J. F. COLLINS, M.A.,and A. ROBINSON, B.A., Wolverhampton Grammar School.
3s. 6d.**SELECTIONS FROM LATIN AUTHORS** (Senior Local

Edition). By A. F. WATT, M.A., and B. J. HAYES, M.A. 2s. 6d.

LATIN COMPOSITION. By A. H. ALLCROFT, M.A., and

J. H. HAYDON, M.A. 2s. 6d.

MATHEMATICS AND SCIENCE.**THE SCHOOL ARITHMETIC** (Senior Local Edition).

By W. P. WORKMAN, M.A., B.Sc. 3s.

THE SCHOOL GEOMETRY. By W. P. WORKMAN, M.A.,

B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

Also in Two Parts as follows:—

Part I.—Covering Euclid I, III (1-34), IV (1-9). 2s.**Part II.—**Covering Euclid II, III (35-37), IV (10-16), and VI. 2s.**SENIOR BOTANY.** By F. CAVERS, D.Sc., F.L.S. 4s. 6d.**SENIOR CHEMISTRY.** By G. H. BAILEY, D.Sc., Ph.D.,

and H. W. BAUSOR, M.A. 4s. 6d.

SENIOR HEAT. By R. W. STEWART, D.Sc., and J.

SATTERLY, D.Sc., M.A. 3s.

SENIOR SOUND AND LIGHT. By R. W. STEWART,

D.Sc., and J. SATTERLY, D.Sc., M.A. 4s.

SENIOR MAGNETISM AND ELECTRICITY. By R. H.

JUDE, M.A., D.Sc., and J. SATTERLY, D.Sc., M.A. 5s.

*Complete Catalogues of Books, including Special Subjects, for the Oxford
and Cambridge Senior and Junior Local Examinations, 1914 and
1915, post free on application.*

University Tutorial Press, Ltd., London.**THE CONFERENCE OF EDUCATIONAL
ASSOCIATIONS.**

THE Conference of twenty-one Educational Associations met again at the University of London on Friday, January 2 and sat continuously during the following week. Last year, when only thirteen Associations were represented, we regretted our inability to furnish an adequate report, and this year we can only attempt to present to our readers this month and next some of the most fruitful papers and debates, but they will be able shortly to procure for themselves the official volume of proceedings.

The Conference has grown and prospered beyond the expectations of its founders, yet it is still far from attaining its ideal—a Parliament of teachers representative of the whole profession. At the one extreme, the Universities, who have no Association of their own, took no part in it; the Head Masters were sitting elsewhere, and the Head Mistresses, for other reasons, were unable to join. At the other, the National Union of Teachers have naturally felt that, by reason of their numbers and the multiplicity of the special problems they were called upon to determine, nothing but a separate Conference Week would satisfy their requirements. The task of the future will be to combine and co-ordinate. We have the sections, but a British Education Association is still to seek.

One other feature of the Conference must have struck any foreigner present—the absence of the official element. On the Continent such a Conference would assuredly have been opened by the Minister of Education, if not by royalty, and the Secretaries and Inspectors of the Board would have had their say. In England Education still sits on the heights, and only “thunders of her mighty voice” come rolling to us in after-dinner speeches. The attendance was good throughout, and at some meetings there was barely standing room.

For the excellent arrangements, the soirée, and the exhibition of publishers, the Conference was indebted chiefly to Miss Henrietta Busk and Mr. F. Fairman, the Secretary of the Teachers' Guild.

OPENING ADDRESS.

Viscount BRYCE, who was introduced by the Vice-Chancellor, Dr. W. P. HERNINGHAM, took for his subject “Salient Educational Issues.”

Women Teachers.

Having watched education closely since 1864, when he was Assistant Commissioner to the Schools Inquiry Commission, he could say confidently that in the succeeding half century more changes had passed on English education than in any previous century since the days of King Alfred. What better evidence could there be of the increased activity and interest in education than this Conference representing twenty-one Associations, only two of which existed in 1865? Two of these—the societies of women teachers—witnessed to the growth of what is practically a new profession for women, secondary-school teaching. Fifty years ago there were no women graduates, and even in the United States only one college for women. Now the proportion of University-trained women in the States was far higher than in England, and Americans held that for junior pupils women were far better teachers than men.

Bible Study.

He expressed an earnest hope that, whatever might be the issue of the standing controversy between the religious sects, religious instruction and the Bible would never be excluded from our national schools. Experience showed that for moral training based on religion we could not rely either on parents or on Sunday schools. Both at home and in the United States he had noted the incalculable loss, both intellectually and morally, from the increasing ignorance of the Bible.

Nature Study and Spelling Reform were both important movements full of promise.

Problems to be Solved.

England is now fully supplied with elementary schools and fairly well with secondary schools. What is now wanted is intensive cultivation, higher quality rather than more quantity.

We spend already £30,000,000 of public money on education and

purpose next year to spend more. Our usual British impulse is to assume when there is anything to be done that money will do it, but thinking is more important than money, and it behoves us before asking for larger grants first to take stock of the whole present situation to see that what we now spend is all profitably employed, that there is no waste or overlapping.

Salaries.

For one purpose, indeed, more money is needed. The salaries of teachers of every grade are inadequate, and at the same time higher qualifications are demanded of the teacher. He must be professionally trained and he must have sufficient leisure to take in at the same time as he is giving out.

The Idle Apprentice.

The last question he would ask, but not attempt to answer, was: Why do not English boys care more than they do for learning? Wherever he travelled he found the same complaint from the Heads of our firms that the English youths sent out to them showed less interest in their work than their Continental competitors. They did not learn the language, they did not study out of office hours. That was why England was losing ground in foreign markets. Yet the English boy was certainly not inferior in intelligence or character to the boy of any other country. Why is it then that he cares so little for "the things of the mind"? Is it the fault of the schools or of the parents or due to that portentously engrossing interest in athletics?

Secondary Education.

Sufficient attention is not given to secondary instruction. Whether given in grammar schools, or, as was the case in Scotland, in the upper part of an elementary school, its soundness is the most vital thing for the progress of a nation. A nation moves forward less by the average citizens than by its strongest and finest minds. To make the most of these minds—10 per cent. or less of the whole—and to send on to the University the *élite* among these, duly prepared by the secondary school, is the best investment the nation can make.

Science and the Humanities.

Between these two sides of education we have not yet made a proper synthesis. The tide had now set in favour of science, just as fifty years ago it ran too strongly in favour of the humanities. The question to determine was what subjects and what sort of teaching of those subjects were best calculated to train men to think, to enable the mind to play freely round the phenomena of life. A special branch of the problem is to determine the curriculum or curricula of Modern Sides, fit for those who showed little aptitude for the study of language.

Multiplication of Universities.

British Universities might well take a lesson from America by providing more fully than at present for such subjects as political economy, commercial geography, and the elements of finance. But there was a danger that we might unduly multiply Universities. It was better to have a few strong than many weak seats of learning. Let colleges abound, but beware of lowering the standard of a University.

The Universities of the United States had succeeded in enlisting the sympathies and establishing close relations with the business community. At least one-half of their graduates passed into the ranks of commerce, and yet we must not think of education as solely directed to enable people to make their way in the world.

The test of a good education is that it fits men to enjoy the best pleasures, to love knowledge, art, and Nature, gives them springs of joy that will well up from within and supply refreshment and comfort through all the changes and chances of this mortal life.

INCORPORATED ASSOCIATION OF HEAD MASTERS.

THE Annual Meeting was held at the Guildhall, London, and Sir John McClure presided. After the customary welcome by the Lord Mayor, the president delivered his address, and dealt mainly with the Teachers' Registration Council, the unity of the teaching profession, the point of view of the practical man, and the reforms needed in the conditions of teachers.

A resolution welcoming the Conditions of Registration was moved from the Chair and was seconded by Mr. R. F. CHOLMELEY (Owen's

School, Islington), one of the Honorary Secretaries, and passed unanimously. Dr. CREES (Gloucester), in moving an amendment which was subsequently withdrawn, sharply criticized these conditions and pointed out that the bundling of heterogeneous teachers of very varied subjects into one register and the non-insistence of a University degree were a serious setback to the progress of secondary education.

The next subject was National Education. Mr. CHOLMELEY moved a series of resolutions to the effect that in view of the Government's promised Education Bill, certain essentials must be affirmed. These were: that a national system of education is urgently needed; that in all parts of the country children of all ages should have the opportunity of enjoying instruction appropriate in kind and satisfactory in quality; that the next step toward this is the organization of secondary education which cannot be successfully accomplished without financial conditions satisfying the increasing demands for teachers of high qualifications; that these financial conditions could only be established by the State assuming responsibility for securing adequate salary scales and pensions for teachers in all areas, and that if this be done the Board may require all teachers to be registered and all schools to be inspected. Mr. Cholmeley said that secondary education blocked the way at both ends for the future of educational progress. The salaries of teachers in secondary schools were terribly low, and there was no way of raising them under the present financial system. The state of pensions was still worse than that of salaries. There was the case of the Head Master of Kilburton School, who after twenty-five years' work was invalided, and nobody could pay him a penny. No self-respecting country could tolerate such a thing.

The Rev. C. J. SMITH seconded the resolutions.

Dr. CREES followed with a brilliant attack on the desire to establish the State as the supreme authority. Mr. Cholmeley had been talking Socialism all the time without knowing it. He did not think the State would succeed any better with education than it did with the telephones. The success of education in this country was due to voluntary effort. The aim of all Governments is to drive into our schools scholars incapable of benefiting by the education given and to cause the schools to be controlled by ignorant Local Councils. The best step would be to get increased grants from the Imperial Exchequer.

Mr. WILLIAMS (Yalding) said that his school, which had been founded in 1665, was much curtailed in its work by lack of State aid. The Rev. TELFORD VARLEY (Winchester) advocated a business-like system of national education, and Mr. L. M. JONES (Birmingham) was afraid that if the State paid the teachers it would lead to a minimum wage. A few speakers objected to the rather selfish tone of the particular resolution referring to salaries and pensions, and one speaker said, "We are not out merely for loaves and fishes." All the resolutions, however, were passed by very large majorities.

Examinations.

Mr. W. JENKYN THOMAS (Hackney Downs School), one of the Honorary Secretaries, moved resolutions approving of: (1) the action of the Board of Education in entering into negotiations with University Examining Bodies with a view to making school examinations more uniform and organic; (2) the establishment of two grades of school examinations, one general for pupils aged sixteen, and one special for those aged eighteen, to be taken only by schools in a position to supply the necessary specialized teaching; (3) the *pourparlers* of the Board of Education to obtain acceptance of these two examinations by Universities and professional bodies, without which no relief would be afforded to the schools; (4) the establishment of a co-ordinating authority by the Board in conjunction with the Teachers' Registration Council to deal with questions of standard; (5) the representation of acting teachers on examining boards; (6) permission of schools within limits to present their own syllabuses for examination. The mover said that they wanted the public to regard the examination at eighteen as the real leaving examination. The examinations which were best for the school must in the long run be the best for the University.

Mr. BARBER (Leeds) seconded.

Mr. STUART SMYLEY (Sudbury) followed, and in a telling speech convinced the meeting and the movers of the resolution that restriction of the higher certificate to schools in a position to supply the necessary specialized teaching would be prejudicial to the smaller secondary schools by depriving them of their older boys. This limitation, on the suggestion of the chair, was accordingly omitted. Mr. CALDECOTT (Wolverhampton) feared that the removal of the Junior Locals would be very bad, as boys would leave school without any examination certificate except what "we give them in our own estimation." Mr. JONES (Birmingham) thought the examination at eighteen would cause boys to leave at fifteen, as the examination at sixteen would be valueless compared with the eighteen examination, and boys would not take the former and would

be unable to remain to take the latter. He moved an amendment to omit words after sixteen. This was lost and all the resolutions were passed.

Home Work.

Mr. P. SHAW JEFFREY (Colchester) read an excellent paper on "Home Work in Secondary Schools," which we hope to publish next month.

Scholarships to Universities.

Mr. W. LATTIMER (Barnet) moved resolutions criticizing the present arrangement of University scholarships for scholars of slender means as wholly inadequate, and urging the Board of Education to consider the place of such scholarships in a system of national education. Mr. HEWETSON seconded and gave a very interesting survey of the scarcity of such scholarships in most of the counties. An amendment moved by Mr. J. MORTIMER (Ashburton), urging the need for maintenance grants to poor and able students of fourteen to sixteen, as without such aid promising pupils may never have a chance of higher training, was passed and embodied in the original resolution, which was also passed. The discussion displayed a warm sympathy with the capable child of poor parents.

SECOND DAY.

A short service was held at St. Mary Abchurch, at which the Rev. W. TEMPLE (Head Master of Repton) delivered a striking sermon on "Englishmen and Truth."

The Late Dr. Wormell.

At the second day's meeting the PRESIDENT expressed the deep regrets of the Conference at the death of Dr. Wormell, who for many years had been associated with it. Sir ALFRED EWING described again the arrangements for the New Naval Cadet. In answer to questions Sir Alfred said that the new arrangements would last till 1916. Canon SWALLOW suggested that one result of the Admiralty's latest move might be that boys would be taken away from the secondary school at an early age and sent to crammers. Sir JOHN MCCLURE asked whether, though the Admiralty have only guaranteed the scheme till 1916, they are not likely to be committed to the experiment unless it be successful. Sir Alfred replied that he could not attempt to say what was in the mind of the Admiralty, to which Sir John retorted that, as a fellow Scotsman, he was prepared to accept that as a satisfactory answer. He also explained that "public school" was used in the widest sense and would include County Council schools.

External Degrees of London University.

Dr. SPENSER (University College School, London) moved, and Mr. H. CARTER (The Foundation School, London, E.) seconded, resolutions: (1) That no University examinations whatever should be taken by pupils in schools, but that equivalent examinations should be accepted as exempting from such examinations; (2) that the minimum of Matriculation (entry to a University or college) should be seventeen; (3) that a student who has passed the lower of the two school examinations (see Report of Consultative Committee) and has entered a University for a degree course should be required to spend four years at the University before obtaining the degree, and that a student who has passed the higher of the two school examinations aforesaid may complete his degree course in three years; (4) that external examinations for degrees should be discontinued after a fixed date—say 1920—on the ground that the continual grant of degrees on examination only is inimical to the best interests of education; (5) that increased facilities for University training, such as are given in Scotland, should be given to the abler students intending to teach in elementary schools. Dr. Spenser based his plea on the fact that London University was crippling secondary schools and that the continuance of the external degree prevented the proper development of provincial colleges and Universities. Mr. CARTER said that the ideal of education could be fulfilled by an internal student, but not by an external student, for the latter only had knowledge, but not culture. He admitted, however, that he was an external graduate, and by the rare quality of his speech clearly disproved his thesis. The Rev. E. F. M. MCCARTHY, in opposing, said that the resolutions were contrary to the spirit of the age and that in the Midlands some very considerable and very fine educational work was done among the kind of students despised by the supporters of the resolutions. A long discussion followed, in which nearly all speakers deplored resolution (4), until at last Mr. CHOLMELEY moved an amendment to this resolution, which he said by pleasing none may please all and which read: "That the time has not yet come for the abolition of external degrees." This was approved by 44 votes to 16. The first resolution was lost, but (2), (3), (4) as amended, and (5) were carried.

PRIVATE SCHOOLS ASSOCIATION.

THE Annual Meeting was held at the University of London, on January 7. Dr. F. A. SIBLY, the President for 1914, delivered an address, with Mr. S. MAXWELL in the chair.

Dr. SIBLY denounced unlimited State control as the danger which threatened the commonwealth at large and the teaching profession in particular, and endorsed Froude's dictum that the touch of the Government was like the touch of a torpedo paralysing the nerves and veins of every organization with which it ventured to meddle. The private-school master might be a model of all the virtues and highly qualified to exercise his profession and yet be liable at any moment to find himself deprived both of his livelihood and of his savings, for every penny he had spent in fitting his premises for a school would be pure loss. And while the State had thus arrested the development of private enterprise, it had been setting up, regardless of cost, a standard of equipment that not even the wealthiest of endowed schools had attained. And at this juncture it was proposed to demand from private schools proof of their efficiency. The result of this interference was seen in the case of elementary schools over which, for the last quarter of a century, the State had exercised absolute control. The system was denounced by the most eminent of elementary teachers, who declared that the one lesson taught to a whole generation was to hate school and all its works, which the late Chief Inspector, Mr. Holmes, had described as the most perfect instrument ever invented for arresting the development of a child's faculties. A similar condemnation of the system had been passed by the President of the Education Section of the British Association, and by Dr. Sadler, who had given figures showing that workmen who had passed through the elementary school were actually handicapped by their previous instruction.

The Rev. F. W. AVELING, in proposing a vote of thanks to Dr. Sibly, said that while sharing his hatred of State interference he deprecated his sweeping denunciation of State schools. Could it be pretended that the system pursued in all private schools was immaculate?

A resolution was then proposed by the CHAIRMAN and carried unanimously, welcoming the new Teachers' Register and pledging the Association to support it, provided it received specific assurances from the Council that private-school teachers would be dealt with generously.

The proceedings were continued on Thursday. The Rev. S. BLOFIELD read a paper on "The Place of Science in the School Curriculum." Nature study—direct observation and the inferences to be drawn—must be the foundation. Physics should precede chemistry, dealing as it did with objects and activities that were seen and felt more easily. School chemistry should be mainly experimental, and training in careful description should not be neglected.

The Rev. G. H. MOORE read a paper on "Bureaucracy in Educational Administration." If private teachers were in some degree under State control this would be a guarantee to parents and also a support to themselves in resisting unwarrantable parental interference. It was possible also that certain private schools fulfilling functions that public schools would not discharge would receive grants. Personally, however, he preferred unchartered liberty. The Board of Education had assumed such autocratic powers that Local Authorities had but a semblance of power and had displayed such despotism that it seemed as though the parent would soon not be able to choose the school where he would send his children. The Department had, in short, become a nest of theorists and faddists.

In the evening, at a meeting convened by the College of Preceptors, Mr. MICHAEL SADLER gave an address on "The Position of Private Schools." He said he felt it to be unnecessary in this country in existing circumstances to require by law that every school should hold a licence from the Civil Authority. Reasons for establishing State supervision of all schools were, first, a desire to raise the intellectual standard of the teaching; and secondly, a desire to protect the established Government from the dangers arising from nurseries of political opinion hostile to the principles upon which the structure of the government of the country was based. So far as he was able to judge, more was to be gained in political stability in England from freedom than from restriction. In his judgment we in England were not in a position to determine with the confidence which German statesmen felt a hundred or a hundred and twenty years ago to what circle of studies pupils should be required to advance at each stage of their education. In other words, it was not certain what was the meaning of "educational efficiency." Education was so much more of an art than a science that it would be unwise to attempt to confine full freedom to act as teachers to persons who had conformed to what must be in the main an intellectual qualification. He suggested that where a private school filled a place in a national system of education which must be filled

in the public interest, that school must admit inspection and comply with the requirements of the public authorities; that where a private school was elementary, inspection was desirable but not necessary; and that where a private school existed as a protest against the dominant public ideal, registration or inspection would be a peril to its *raison d'être*.

NORTH OF ENGLAND EDUCATION CONFERENCE.

THE Annual Meeting was held at Bradford on January 2 and 3. There was a large attendance and a very full agenda. Mr. M. E. SADLER opened with a paper, "Thoughts on Present Discontents." Taking as his text Principal Griffiths's philippic at the British Association, he observed that the complaints therein set forth were all negative. None of the complainants had signified what he would substitute if he had the power, or what were his ideals. That was the real weakness of the situation. It was a time of transition, and he regarded the present unrest and dissatisfaction among educationists as a hopeful sign, an awakening from a time of torpor and indifference. In complaining of the huge sums now spent on education, Principal Griffiths forgot that there was a big debt to wipe off accumulated during a generation. He overlooked girls who outnumbered boys, yet for the first time in England girls' schools had been created on a national scale. Never within living memory had there been so many teachers enthusiastic about their work, ready to sacrifice their leisure for self-study, and for giving and receiving new knowledge.

Mr. A. C. BENSON contributed a paper, read in his absence, on "The Influence of the Older Universities on the Curriculum of Secondary Schools." The demand for a modicum of Latin and Greek as a *sine qua non* had limited both in range and extent the study of literature. His own experience had convinced him that there were many boys with literary interests and capable of literary culture who were not responsive to the classics at all. Greek culture was unrivalled, but it was a high and guarded fortress and approach was not easy. Latin occupied a far lower place. The one study that was bound in a short time to take a foremost place in the school curriculum was English literature and the training of expression. The old theory that this could be acquired incidentally as pigeons pick up peas was exploded, but it was not yet taught by well equipped and trained masters.

Mr. A. W. DAKERS, President of the N.U.T., expressed his profound disappointment with the address of the opener. Mr. Sadler had held before them lofty ideals, but what they needed was proposals for practical reforms. Would he not help them in their crusade against huge classes and unqualified teachers? He could never understand why thirty-five was the maximum for a class in a secondary school and sixty both the maximum and the minimum for a class in a primary school.

Mr. T. P. SYKES (Bradford) spoke of the growing discontent of teachers in regard to salaries and promotion. Before the end of the month 70 per cent. of the Herefordshire elementary teachers would "down tools." The strike might be met in three ways: Oxford University might send a supply of "blacklegs," but they would find teaching harder work than shovelling coals for gas-making; or the Board of Education might turn on their Inspectorate to staff the schools—that would be an excellent plan for giving these gentlemen some practical acquaintance with their work; or lastly, the Board might tell their Authority that the salaries they were paying were wholly inadequate. That had been the course adopted in the case of secondary schools all along the line, but the Board had resolutely refused to do so in the case of primary schools.

ASSOCIATION OF ASSISTANT MASTERS.

THE Annual General Meeting of the I.A.A.M. was held on January 3 at the London Day Training College.

The Report for 1913 showed steady growth: the number of members at the end of the year was 5,027, an increase of 563 on 1912.

The Treasurer, Mr. G. D. DUNKERLEY, in presenting the Statement of Accounts, stated that the yearly income from members'

subscriptions had increased by £240, but most of this had been expended in the work of propaganda. The Legal Fund now amounted to a total of £1,232—none too large a sum, as at any time they might be called upon to carry a case to the House of Lords.

Mr. W. A. NEWSOME, in presenting the Report of the Joint Agency, said that the number of vacancies notified to the Agency was the same as in the previous year, but the number of posts filled was greater by 20 per cent. He reckoned that the Agency had saved assistant masters at least £500 in commissions. In salaries he could report no advance. The average salary was still for resident masters £110, for non-resident £150, and it must be borne in mind that this did not represent the average salary of assistant secondary masters in England, for the Agency refused to deal with posts below a certain minimum, roughly £60 resident and £100 non-resident.

The retiring Chairman, Mr. J. C. ISARD (The Leys School), then delivered his address. He referred to the great Conference of Secondary Teachers in the first month of 1913, organized by the Association, at which Lord Haldane expounded the forthcoming Government Bill of educational reform. At that meeting, and afterwards at the Midland Conference held at Birmingham, their Council had fully set forth the policy of the Association and the proceedings had been fully reported in the press. With the Board of Education they had pleaded for the right of hearing of dismissed assistant masters before the governing body, but so far they had made little way. As it has not been legally decided that the governing body and not the head master is the employer, the right of appeal, if still urged, must obviously be to some other body than the governors. They had also pleaded with the Board to withhold grants from schools where the salaries were below normal. The allocation of Government grants to salaries had much in its favour, and had been advocated by Mr. Cholmeley in his recent volume, but there were difficulties in working out a general scheme, and the Federal Council feared that girls' schools with their lower scale of fees and salaries would find themselves at a disadvantage. They had also urged that in all new schemes for schools the staff should have the right to nominate representative governors. He would act as a channel of communication between the staff and the governing body. It was simply amazing how incessant might be the changes of staff in a school without the notice of the governors or any explanation from the head master.

He looked forward to the Teachers' Register as the first step towards organic self-constitution, as a professional corporation that would retain its own entity for many useful purposes, alongside of—dare he say possibly superseding?—the State Department.

Mr. SOMERVILLE proposed the first resolution approving the conditions of registration and recommending all members to register at once. The Vice-Chancellor of the University of London had told them the day before that teachers had now become an organized profession; he would rather say that they had for the first time an opportunity of becoming such. Mr. Bryce, at the meeting, had hinted, not obscurely, that the thirty millions allotted by the State to education might have been better spent. Had teachers had a voice in the spending there would have been far less waste. Local Authorities, new to the task, had been very wasteful. In the future he hoped that the three forces—the State, the Local Authorities, and the Teachers—acting on one another, would all move in the same direction. It was no paradox to affirm that from better organization more individuality would result. They had heard the day before from their Irish Branch a protest against their exclusion from the Register, and he hoped that a Register for Irish and one for Scotch teachers would soon be established. The Teachers' Council would do more than register. Two questions had already come before it, the training of teachers and the simplification of examinations. On both of these they hoped to co-operate with the Joint University Board and the Board of Education.

Mr. D. L. LIPSON (Bradford) seconded. Mr. Somerville had done more than any individual to bring this infant into the world. The resolution was carried by acclamation.

Mr. MARTINEAU (Birmingham) proposed a resolution expressing the Association's regret at the refusal of the Board of Education to insert in all schemes a clause giving to assistant masters served with notice of dismissal the right to be heard by governors.

Mr. A. FORSTER (Leeds) seconded. The resolution was carried unanimously.

Mr. G. H. HEATH (Mercers' School) proposed a resolution strongly condemning the action of certain Local Education Authorities in putting out assistant masterships to the lowest tender. He gave two flagrant instances. In one a selected candidate was told by the head master that he was far the best in the field, but that Mr. — had made a lower offer. In the other a candidate received a telegram from the clerk of the Local Authority, "What is the lowest salary you would take if appointed?"

ASSOCIATION OF ASSISTANT MISTRESSES.

THE thirtieth Annual Meeting of the Incorporated Association of Assistant Mistresses in Public Secondary Schools was held on January 9. Miss E. R. PEARSON (St. Leonards School, St. Andrews), the President for 1914, was in the chair.

Miss I. M. DRUMMOND (North London Collegiate School), in the presidential address, which was read in her absence, said they were faced with the alternative of the freedom but comparative inefficiency, from the national point of view, of individual effort in secondary education on the one hand, and the efficiency but inflexibility of a complete State system on the other, or they must find some compromise between the two. The shortest way to attain an immediate improvement in the general status of teachers and the quality of the weaker schools would very likely be for the Government to take entire direction of educational affairs. In spite of inadequate remuneration, she believed that the majority of the assistant mistresses put freedom in their work and the absence of hampering regulations before an increase of salary. They were, in fact, feeling their way to a compromise between the flexibility of the present system and the effectiveness of organization, and the compromise would be found in a process of decentralization. Side by side with the State's responsibility for education had come into prominence the Local Authorities, to whom, within wide limits, the Central Authorities delegated their power, retaining the right to criticize and even to punish. Here they had the framework for a national system of education—a system which might never be so perfect (or, at least, so neat and diagrammatic) as that of some other countries, and might never offer such security of tenure and uniformity of conditions of service for the teachers, but which would have the advantage of retaining a greater power of growth and adaptation to local needs than would be possible with more centralized control.

Miss E. J. EWART (late of the Manchester High School), Assistant Organizing Officer for Woman's Work at the Liverpool Labour Exchange, read a paper on "Labour Exchanges as Affecting Assistant Mistresses." Miss Ewart emphasized the fact that Labour Exchanges were meant for all classes of workers, and that they had already been made use of by teachers requiring posts and employers requiring teachers.

The following resolution was proposed by Miss SHOVE, seconded by Miss GIBSON, and passed unanimously:—

"That this Association affirms the principle that the payment for a full scholastic year's work should be the full agreed annual stipend, and in cases where the year is divided into three terms, the payment for a term's work should be one-third of the agreed annual stipend, whether the assistant mistress is returning after the vacation or not."

At the evening meeting, Mr. A. C. BENSON, Fellow of Magdalene College, Cambridge, delivered an address on "The Art of the Essayist." He said the point of the essay was not the subject, for any subject would suffice, but the charm of personality. The essay was the reverie, the frame of mind represented by the words of the old song, "Says I to myself, says I." He doubted if the English temperament was wholly favourable to the development of the essayist. An Anglo-Saxon liked doing things better than thinking about them, and in his memories he was apt to recall how a thing was done rather than why it was done. We were also naturally rather prudent and secretive. We said that a man must not wear his heart upon his sleeve, but that was just what the essayist must do. We had a horror of giving ourselves away; we liked to keep ourselves to ourselves, "The Englishman's home is his castle," but the essayist must not have a castle, or, if he had, both the grounds and the living rooms must be open to the inspection of the public. The essay had taken very various forms in England, but the essence was throughout the same. It was personal sensation, personal impression evoked by something strange or beautiful, curious, interesting, or amusing. The appeal of the essayist to the world at large would depend on the extent to which he experienced some common emotion, saw it in all its bearings, caught the salient features of the scene, and recorded them in vivid and impressive speech. The essayist was, therefore, to a certain extent, bound to be a spectator of life. He must be like the man in Browning's fine poem, "How it strikes a Contemporary," who walked about and took note of everything. The writer must not be too much interested in the action and conduct of life. If he hated his opponents and rewarded his friends, he at once forfeited sympathy and largeness of view. He must be concerned with the pageant of life as it wove itself into a moving tapestry of scenes and figures rather than with the aims and purposes of life. He (Mr. Benson) thought the charm of the essayist depended upon his power of giving the sense of a good-humoured, gracious, and reasonable personality, and estab-

lishing a sort of pleasant friendship with his reader. Our view of life was a little damaged nowadays by the vast output of fiction, and especially of romantic fiction. The danger of romance was that it was an attempt as a rule to escape from unromantic conditions, and that it tended to give sentiment too large a place. Fiction disposes us to come back to life with a sigh, finding it trivial and dreary. Idealism was a fine thing, but it was a weakening thing if we arrived at it by eliminating reality. It was like a perpetual banquet and ended in a loathing for homely food. The essayist was the opposite of the romancer, because his one and continuous aim was to keep the homely materials in view, to face actual conditions and not to fly from them. The work of the essayist was to make something rich and strange of seemingly monotonous spaces and lengths of level road.

THE CLASSICAL ASSOCIATION.

THE Annual Meeting of the Classical Association was held at the Bedford College for Women, Regent's Park. Sir GEORGE KENYON presided.

Mr. R. W. LIVINGSTONE read a paper on "The Teaching of the Classics in Literature." He had no wish to exchange the present thorough grounding in scholarship for an appreciation of literary style, but both objects could be pursued together, and at present, while boys were taught to translate, no attempt was made to teach them how to read. Literature was the hardest of all subjects to teach, because boys lacked that knowledge of human life and passion on which an appreciation of literature depended. Most boys had read the Fourth Satire of Horace's First Book, yet if asked what they had learnt from it of Roman religion, Roman bookshops, what Horace thought of his own poetry, what his father was like, whether he had private means, they were dumb and sulky. It was a more difficult matter to get a boy to see the difference between good poetry and bad, yet it was quite possible to ask what were the good and what the bad lines in Virgil.

On the second day Sir FREDERIC KENYON delivered his presidential address on "The Classics as an Element of Life." The Association had just completed its tenth year and membership had risen from 822 to 1,500. It had an income of £400 and £900 in investments. Of the work done, the first in time and the most definite was the reform of Latin pronunciation. Though Oxford was as ever "the home of lost causes" and Eton had yielded to the *non possumus* of the preparatory schools, yet the battle was won. In twenty-four out of thirty-nine of the greater public schools the reformed pronunciation was in universal use, and only in three it was not used at all. In the 577 schools under the purview of the Board of Education, in girls' schools, and in the other Universities, it was practically in universal use. In the next generation the pronunciation of the Westminster play would be cherished like a specimen of the dodo. The classics were, or might be, not merely a training for life, but an element of life. The cause of the classics was the cause of all imaginative aspirations, of all intellectual interests. The object of classical masters was not to make small boys translate Caesar and Xenophon, but to give them intellectual interests that would enable them to appreciate not only Horace and Virgil, but Dante and Milton, Goethe and Wordsworth, all the great thoughts of all ages and all lands, to discern to-day between the true and the false, the new voices of beauty and the claptrap of self-advertisement. Their creed was that a man would be a better man of business, a better lawyer, a less hide-bound politician if he kept alive in his soul the love of literature and interest in things of the intellect of which the Greek and Latin classics were the spring and the perennial source of refreshment. It was a cruel error which made "classical" a synonym for the formal, mechanical, dead. Latin, with the important exception of a few great names such as Virgil and Catullus, might stand mainly for law and routine, but Greek stood for the very spirit of life, inquiry, freshness, beauty.

It was lamentable to see how small a part the reading of great literature played in the lives of men and women after they had left school and college. Yet it would be easy for any man with a fine classical education to do as he had done. When living some forty miles from London he had in a few months in transit read the "Iliad" the "Odyssey," the "Aeneid," the whole of Catullus and Martial, and five books of Livy. The impossibility of replacing Greek and Latin by modern languages had from many points of view been demonstrated. Modern Western civilization, the sense of beauty—artistic and literary—was composed of two principal elements, the classical (mainly Hellenic) and the Christian (Gothic and Medieval). In these two our spirit was at home, as it could be in no other age or country, because to no other age or country did we stand in the same relation of parentage. If from a museum all that

was not classical or Christian in origin were excluded, how little would be left. If Greek ever ceased to be a leading influence in literary and artistic consciousness, the human intellect would have dark days before it, the pulse of humanity would beat at a lower rate until there came a new Renaissance. Greek had a double value. It was at once the spirit of bold venture which refused to be dominated by convention, and on the other hand it imposed the discipline of sanity and good taste. The present tendency of classical scholars was to pursue the by-paths of archæology and mythology, but the supreme value of Greek consisted in the supreme excellence of Greek literature and art in this age of splendour. The classics were not dead, but an element of vital importance to modern life; not a special reserve of scholars, but the common heritage of all who cared for things of the spirit. It was the task of the Association to see that this *καλλώτισμα πλούτου* was not lost through the pressure of competing subjects and by substituting the pursuit of knowledge for the cultivation of intellectual tastes and interests.

Mr. W. L. PAINE read a paper on "The Reformed Method of Latin Teaching"; Mrs. S. ARTHUR STRONG on "Classical Antiquities in American Museums"; Prof. RIDGEWAY on "The Origin of Greek Tragedy, illustrated from the Dramas of non-European Races"; and Miss F. M. STAWELL on "The Scamander Ford in the 'Iliad.'"

Prof. Ridgeway was elected President for the coming year. The General Meeting for 1915 will be held at Newcastle-on-Tyne.

THE TEACHERS' GUILD.

Rural Education.

SIR GEORGE FORDHAM, Chairman of the Cambridgeshire County Council, devoted his paper to showing that there was no such thing as "rural education." Who ever spoke of "urban education"? All admitted that the elements, among which must now be included vocal music and drawing, were common to town and country schools alike. Specialization in agriculture, he contended, is quite beyond the reach of the elementary school. The child could have no knowledge of chemistry, &c., on which the applied science of agriculture rested, nor could he learn the practical side of the various methods and processes necessary for the proper cultivation of the soil. Children learnt all they were capable of learning at home and in the long harvest holidays better than they could learn it at school. The conclusion reached was that the true line of progress for schools, whether in town or country, was to aim at a sound general training vivified and lighted up by all that is best in sentiment and in atmosphere of the natural local environment.

Mr. A. D. HALL, of the Development Commission, read an admirable paper tracing the organization of agricultural education since the first Treasury grant in 1888. In research much good work had been done by institutes mostly connected with a University. Farm institutes had also been set up by County Councils, supported mainly by Government grants. The weak point here was that the Board of Agriculture had no powers to compel a backward county to make proper provision. But the most notable deficiency came in the gap that existed between the primary school and the farm institute. In his experience the boy in the rural school was above the average in intelligence, yet the farm labourer of from eighteen to thirty had become the most uncouth and impenetrable "hand" to be found in this country. He was wholly averse from turning the primary school into a trade school, and the less the elementary teacher dealt with agriculture the better. Continuation schools must be established for lads between the ages of fourteen and eighteen. In these the instruction must be real without being technical. It should treat of the way a plant grows, of the physiology of the farm animal, not of nitrate of soda and albuminoid ratios. This would cost money and we must be prepared to pay the piper.

THE TRAINING COLLEGE ASSOCIATION.

THE Training College Association discussed the subject of Demonstration Schools, and passed resolutions to be referred to the Executive Committee for their consideration:—(1) "That every training college should be equipped with a demonstration school of the type indicated by the Regulations of the Board of Education." (2) "That the head teachers of such schools should be treated as part of the staff of the training college and that such staff should receive special remuneration." (3) "That the addi-

tional cost should be met by an increase of the Government grant to training colleges." (4) "That the Committee of Managers of the school should include a large representation of the training college staff." (5) "That for the purposes of Government Inspection the school should be considered an integral part of the training college."

SIMPLIFIED SPELLING.

ON Monday afternoon the Society held its Annual Meeting. The President, Prof. GILBERT MURRAY, was prevented from attending by indisposition, and wrote strongly urging the necessity for reform. The present chaotic spelling spoiled a child's ear, perverted his sense of logic, and wasted time. Other languages had reformed their spelling and English must follow suit.

Sir WILLIAM RAMSAY, who in Prof. Murray's absence took the chair, said that the greatest bugbear to a foreigner learning English was the spelling. But for it English would be the language of the world. There was no such difficulty in French, German, Italian, and Spanish. On the other hand, he had been stopped in his attempt to learn Russian by finding that the spelling was no guide to the pronunciation. Our present spelling had not been stereotyped before the time of Dr. Johnson's Dictionary and it was not too late to alter it. But the reform should proceed gradually and by degrees, as in France, where *s* was being substituted for the final *x*. He advised the Society to make a start by bringing out a penny booklet giving a list of misspelt words, such as "sulphur," "rhyme," with the correct spelling.

Miss BURSTALL (Manchester High School) said the main opposition to reform came from the cultivated classes. They were proud of their dearly won accomplishment and loath to surrender this shibboleth of good breeding. For support they must look to the working classes, who would rebel against such waste of the few and precious years of schooling, and they would be backed by women teachers to whom was committed the instruction of young children. The Poet Laureate had shown that phonetic spelling, so far from vulgarizing the language, would arrest the decadence of slipshod speech.

Standardization of English Speech.

Prof. RIPPMAUN noted the marked tendency to uniformity brought about by increased intercommunication, by boarding schools, and the stage. Here change was increasingly slow, though there were still marked variations between North and South, as in the pronunciation of *wh* and of final *r*. In dialect change was unconscious and more rapid—compare the Cockney of Dickens with the Cockney of to-day. We needed a universal standard of good speech, one that should commend itself not only to the educated Londoner but to the educated Colonial. To settle this they needed an Imperial Conference *ad hoc*, and he proposed a resolution calling on the Board of Education to summon one.

Dr. WESTLEY MILLS, a Canadian, seconded, and after some discussion it was carried *nem. con.*

The Secretary, Mr. SYDNEY WALTON, stated that the membership of the Association had increased from 871 in 1912 to 1953.

SOME EXPERIMENTS WITH THE DRAMATIC METHOD IN TEACHING HISTORY.

MY first recourse to the dramatic method was made when I knew nothing of the subject except by hearsay, and had seen no literature except one of a series of dramatized histories by Mrs. Basil Gothorp, which seemed inadequate to my purpose. I felt that some impetus was needed for a form of girls, averaging in age eleven or twelve years, who were bright enough, but very averse to the drudgery of learning historical events in chronological order. We had successfully surmounted two invasions of Ancient Britain, and, after all, Alfred, via burnt cakes and the disguise of a harper (the details supplied by the class, not by me), could not fail to be connected with the third. But about and after Alfred came so hopeless a tangle of Old English kings that I hesitated to approach a fourth invasion with such indefinite visions behind. I therefore selected two men in the period, Swegn and Ethelred, whose characters presented considerable

contrast, and asked for impressions as to what sort of men they might respectively be. After a shy beginning on the part of one or two—"Ethelred was a coward," "Swegn was fond of fighting"—suggestions, all of which we wrote down, came in rapidly. The characters were soon outlined. I now proposed that we should imagine that, after Swegn's last victorious encounter with the English, an interview between himself and Ethelred took place. We represented Ethelred as waiting in his tent with his advisers to hear the result of the battle. The advisers were characterized before we proceeded. We considered the attitude of the adviser and Ethelred towards one another and the condition of the country. It was agreed that there would be an undercurrent of antagonism between the servant who saw his country falling to ruin and his inadvised, negligent master, who was disposed to blame others for the misfortunes caused by his own folly. At the moment when Ethelred, having sent a messenger for news, walked aside, the two advisers exchanged bitter comments, and by their reflections on past and present gave an outline of the history of the Danish invasions. After the announcement of Swegn's victory, he himself was heralded.

With this start, which was quite a mutual affair, I dismissed the girls to try and draft out the plot independently to a conclusion. The results brought me some surprises. It was the girls who struggled for the lowest position in history who had the liveliest course of action and most fertile imagination. Great amusement greeted the suggestion that Swegn would be very thirsty after fighting all day and would want something to drink. In one version Ethelred was so enraged at Swegn's taunts that he drew his sword to stab his enemy and was only restrained by the attendants. Gathering all these efforts together—of which most had strayed from the form of dialogue to the narrative—I made of them a scene which, even if it lacked close reference to historical accuracy, was not far from human in its motives, emotions, and deeds. I composed it in (exceedingly bad) verse, because I thought its rhythm would make it more easily learnt by heart than prose. For the girls to obtain a copy of this play there was but the one method of their writing it down at my dictation. Next it had to be learnt by heart. Notwithstanding these difficulties, however, the result was a great success. I proceeded to make use of the experiment in other classes, and came to certain conclusions and ideas as to the most valuable course to pursue.

I have outlined my first experiment thus carefully because I did not discover that any other method of introducing the drama answered better. Whether I used an original or printed play, I began by inducing the girls to discuss and characterize the persons who had a part in it; to sketch the scene, and to outline the plot of the play, as one event arose out of another, or out of the natural conduct of the characters.

I now produced the play. Sometimes I wrote it myself independently, or guided by sketch-plans from the girls; occasionally I adapted, as "Becket" from Tennyson; but gradually I incline to the prepared play, for reasons I give below. Unless the girls were quite small, I next required them to take down the play at my dictation. This allowed the minutest examination of, and considerable familiarity with, sentence after sentence. Much mutual criticism was passed on the motives and language thus revealed and saved explanation later. It introduced the girls to a language, punctuation, and style which does not enter into the regulation dictation or composition lesson. When there was more than one scene, we alternated writing and acting and did not feel the drudgery.

When it came to the actual acting, I allowed no dressing-up and no properties beyond the most necessary—chairs, rulers for swords, cardboard knives and forks, &c. I had more than one reason for this. I wished to maintain the make-believe character of the whole process. I impressed this on the girls again and again, and it saved me from the danger (save in one or two hopeless cases) of having the events of the play re-offered me as history in answers or tests. Secondly, I did not wish to have attention distracted from the substance of the drama by clothes which, after all, cannot be correct in form, and are apt to go wrong at awkward moments and degrade the character of the lesson. Such dressing-up takes

endless arranging, trouble, and time, which are hardly well spent. Moreover, it often produces a degree of excitement in the children which is beyond enjoyment and injurious. I thought the dramatic method could only be of practical use if it were capable of everyday application without fuss. I found that the disappointment my decision caused was most quickly forgotten. Children's imagination can supply an extraordinary amount. When a table came in question, everyone sat contentedly on the floor.

Lastly, the periodic taking of the play was made conditional upon the maintenance of a good standard of history on the whole, and would be forfeit for a short or long while on the cessation of good conduct.

All these experiments brought me very definite hopes for the dramatic method in history. My first intention had been simply and solely to provide a successful and more interesting vehicle of historical information, or, at any rate, repetition. And I am determined that, so far as I am concerned, this shall remain the primary object of my recourse to the play. But in these terms I include a good deal. I do not mean merely that even clauses of a treaty may become intelligible and interesting when the previous struggle has been actively realized, and when the reading of them is greeted by one side with acclamation, by another in sulky resignation. The play does more than this. It humanizes the people of the past for the pupils. It is history fulfilling one of its best aims—helping the girls to consider, study, and try to understand human conduct and conflict of ideas. Their interest is spurred to look into the struggles of their own day, and their imagination to inquire in other cases into the motives and emotions which are untouched by the elementary textbook. They cease to be so sure who was right and who was wrong. Lastly, the real play supplied that excellent thing which my own efforts, hastily written down in the intervals of a full time-table, could never give—a real feeling for the age they depict, a picture of its customs, opinions, and beliefs. I found that Miss Macdonell's plays* really helped the children to gain some idea of what life was in early times, without imperilling their instinct that humanity itself is universal.

It will be seen that in many of these ideas I differ considerably from those of Miss Finlay-Johnson in her book, "The Dramatic Method of Teaching" (Nisbet, undated). I do so consciously. Miss Johnson's school was placed in peculiar circumstances. Entirely in the country, dealing with one special class of children, removed from the competition of examinations and other strenuous conditions which it would be futile to deny or try to prohibit, her efforts and time-table (all entirely under her own control) could be quite different from those of the busy teacher in a modern secondary school. She depended for most of her results upon her oldest scholars. But upper school girls in a town have no time to adapt plays from two or three sources and little for acting. Nor have they, beyond a certain age, great inclination for it. I speak for the moment only of the everyday acting in the classroom under the dramatic method. Lastly, they are often too self-conscious to gain greatly by it, even if the acting seems intrinsically better.

Miss Johnson speaks of her children and teachers having lived for a space in a world of "romance and happiness." We all wish, with Miss Johnson, that childhood may be happy. But may not the purest "romance and happiness" be an insufficient preparation for that arduous and prosaic rôle in the struggle for existence which awaits almost all our children to-day? There is an active trend in modern education to remove the pill entirely and administer the sugar coating of knowledge only; to make instruction one long entertainment exacting the minimum amount of mental effort on the part of the child. There is no reason why children should not begin to depend for their school happiness on that sober satisfaction gained from work well done, even if it be hard. Some training in positive drudgery will not be out of the way. Even play-

* "Historical Plays for Children." By Amice Macdonell. (6d. per volume. Allen.) See *The Journal of Education*, Vol. XLII, pp. 441 f.

acting, for all its value, can be overdone—can become a rigid thing, or a mere trifling pastime.*

Nor do I feel myself able to testify to results as miraculous as Miss Johnson's. Lower-school girls, at any rate, did not compose scenes in diction even faintly resembling that of Sir Walter Scott or other authors they had read. Henry II's remarks to Becket, when the latter had refused to sign the Constitutions, seemed to me in their versions rather modelled on the tones of a mistress calling a girl to order. Nor can I believe that an undiluted use of the dramatic method in all lessons will produce the perfect citizen, as Miss Johnson seems to contend (pages 116–118).

Nevertheless, with Miss Johnson's general principles I find myself largely in agreement (as pages 28, 31, 43, 44, &c.), and, *mutatis mutandis*, I am beginning to divine what the history play may do for lower-school forms. It must be written by one who is quite conversant with the period. It should be moderate in length (Miss Macdonell's plays are rather long for practical purposes). It need not always treat of those outstanding events, such as the story of the burghers of Calais, which so appeal to the child's sentiment that, once told, they are never forgotten. It is often especially required for the period which he at first labels "dull" and "difficult." It can yet, with varied scenes and action, with characterization simple but sustained and consistent, be a play of lively interest. While it need not be exaggeratedly archaic in style and language, some characteristic words and expressions stimulate inquiry and interest. It treats preferably of older periods, a feeling for which it is often really difficult to instil, and where the paucity of pictures, letters, and records needs some supplement.

For plays of this sort I see a need. On lines such as these I conceive for the dramatic method in history a *métier* of the highest value, provided it be handled with sympathy, tolerance, and humour; the acting, since finished histrionic art is the very last thing aimed at, not interfered with too much; and the whole not stifled by too rigorous discipline. In this way, it will not only instruct, but educate; it will readjust in an amazing way the relative values of the children, for themselves, one another, and their instructor. Nor would I under-rate the gain of the latter in the process. Once again she will be surprised at activity and sense in unexpected quarters, abashed by the revelation of acuteness, observing power, and depth of temperament in her pupils; once more, she will learn how and when to withdraw her own personality and let her class teach itself.

MARGARET KÖRNER, M.A.

FLORENCE NIGHTINGALE.†

"Dux femina facti."

THIS admirable and solid life is a masterpiece of the biographer's art, and will certainly hold a high place among our national biographies. Mr. Jowett remarked to Miss Nightingale that she had become a legend in her lifetime. She returned from the Crimea in August, 1856, after twenty months of hell, a popular heroine. Longfellow's poem on "The Lady of the Lamp" and Miss Yonge's sketch of her in "Golden Deeds," representing her career, seem to have fixed the picture for ever. In reality, the Crimea was child's play to the work Miss Nightingale afterwards achieved. It is true that she suffered from a severe form of neurasthenia, and retired to a Mayfair bedroom. But it is equally true that in this seclusion she did the work of ten men to improve the health of the British Army, reorganize the War Office, spread the principles of building and sanitation on right lines for barracks, hospitals, infirmaries, and kindred institutions; her work followed the Army to India, and spread thence to

stations, municipalities, and remote, primitive villages; it embraced vast schemes of irrigation, navigation, drainage, improved agriculture, agricultural banks, education. There seems little that it did not touch, and touch with intelligent comprehension and all the determination of a determined woman to better the organization of Society. Miss Nightingale has summed up her practical working theory in a few words: "Health is the product of civilization . . . It is as if God had said, 'Mankind is to create mankind.'" Hence her patriarchally long life of ninety years was devoted to levelling up. A preacher in an obituary sermon claimed that all Miss Nightingale's work was done "by force of simple goodness." This is pure nonsense. Born in 1820, she had the inestimable advantage of a cultured father, a pioneer in the woman movement, who gave her an education in mathematics, history, philosophy, and languages, ancient and modern, that few men of her day enjoyed. When a girl of seventeen she travelled with a note-book, was deeply interested in politics and reform, and jotted down statistics dealing with the laws, customs, state of agriculture and government of the different countries she visited. Wealthy, handsome, cultured, able, she has left on record that for want of a proper vocation she was at thirty sick of life and saw nothing desirable but death.

It is noteworthy that in the infinite importance she attached to health Miss Nightingale's view coincided with that of Lord Beaconsfield: "Health is the statesman's first duty." The recent establishment of school clinics is a practical acknowledgment by the Board of Education of the truth of this dictum. Miss Nightingale's self-imposed task was to teach statesmen the absolute importance of health; being a most accomplished statistician, she proved over and over again that improved health in the troops and the nation spelt economy writ very large in the physique and work of the people. A soldier is an expensive animal; on his death he must be replaced by another equally so. In one year Miss Nightingale, by improved sanitation in army hospitals and barracks in India, saved the military budget £285,000. It is regrettable to learn—and certainly one could never learn it from the reviews of this book that have appeared in the British Press—that the majority of War Office officials would have cheerfully burned her at the stake, as a most interfering woman. Only from the book itself can one realize what the character of Miss Nightingale's work was at the War Office, the India Office, and with the Government of India, not to mention the hospital and infirmary committees, the town councillors and social workers of every kind who sought her advice and help. She could not have done half what she achieved had she not had the nation behind her, the direct result of her admirable work in the Crimea, and the Queen and Prince Albert to smooth her path in every way with ministers and statesmen. The revelations of the *Times* correspondent as to the state of the troops in the hospitals and trenches had dismayed the royal pair. At a later date, during the Egyptian War in 1882, seventeen letters from the Queen arrived at the front in one day dealing with the health and comfort of the troops. As a constitutional sovereign, and one whose able consort excited the mean jealousy and spite of the English nobles and officials, the Queen was unable to do what she would have liked to do, and fell back, at least to some extent, on Miss Nightingale. She commanded Lord Panmure, Secretary for War, to see the Lady-in-chief and try to give effect to some of her suggestions.

A far greater opportunity came when Sidney Herbert, who had procured her the invitation to proceed to the Crimea, was made War Secretary, 1859. Between them the pair nearly reorganized the War Office; all but the main-spring was put in when, to her great grief, not untinged with remorse, Lord Herbert died, largely of overwork. All that Miss Nightingale achieved was done by working through the officials who desired reform. They showed the most extraordinary devotion to her. She acted the part of inspirer, and then supplied the propelling force. She had the genius of a great commander, the breadth of mind that surveys the whole field, deals with legions as others deal with units, together with that mastery of minute detail that is more commonly a woman's gift than a man's. She was in full com-

* As in some scenes recently published in the *Schoolmistress*.

† "The Life of Florence Nightingale." By Sir Edward Cook. 2 vols. (30s. Macmillan.)

munication touching the sanitary condition of the Army in India, and of India itself, with five out of six Viceroy's. She secured the appointment of Lord Lawrence to that post, and other Viceroy's called before sailing to know her will and do it. Lord de Grey (Ripon) also owed the post of War Secretary to her. Commanders-in-Chief came to her to discuss what could be done for the health and the more rational life of the soldiers. It may here be said that the death-rate of the home Army, which was 17.5 in 1857, fell to 2.47 in 1911, and this improvement is due to two reformers, Sidney Herbert and Florence Nightingale, the initiators of the new model in Army organization.

With regard to the field that the world has considered as essentially Miss Nightingale's own, the training of nurses, but which Sir E. Cook's biography clearly shows occupied a very secondary place in her life's work, it is interesting to notice that the founder of modern, trained nursing attached great importance to marks, and even prizes. We are told that "no public school, University, or other institution, ever had so elaborate and exhaustive a system of marks." The directions as to how notes of nursing cases are to be taken are no less thorough and complete. In this connexion it is good to notice that Miss Nightingale was a home-maker, and exerted herself quite as much to secure pleasant conditions of life for the nurses as admirable training.

Her work for statistics is beyond praise. She nearly exploded the War Office with her figures and deductions. She calculated the civil death-rate of Kensington as 3.3, that of Knightsbridge Barracks as 17.5, and pointed out that the barracks were a death-trap for the inmates. Non-reforming officials styled this sort of thing "the beautiful nonsense of the Bird"; but the "Bird" showed that the soldiers' good health diminished the Army Estimates, and this argument proved convincing to Chancellors of the Exchequer. Miss Nightingale was a life-long friend of Mr. Jowett of Oxford, and between them they desired to found there a Professorship of Applied Statistics, to which her name was to be given. She complained that no use is made of the statistics we collect; with her statistics were a way of finding out the will of God, of tracing the path to health. It was proved to the friends that, if statistics are not made an examination subject, then "a professor is without a class and often sinks into somnolence." The scheme fell through. She thought statistics ought to be applied to the results of elementary education, in order that we may decide what path we should pursue, in what direction modify our aims. We should tabulate "What has been the result of twenty years of compulsory education? What proportion of children forget all that they learn at school? What result has the school-teaching on the life and conduct of those who do not forget it? Or, again, what is the effect of town life on offspring, in number and health?"

At a very early period Miss Nightingale came to the conclusion, now probably held by a majority of observant elementary educationists, that education should be more manual and less literary. She correlated the subjects of pauperism, bad housing, lowered health, and elementary education in her "Note on Pauperism," which Carlyle considered admirable and above all things practical.

The Professorship of Statistics at Oxford fell through, but Mr. Jowett declared in a letter to Miss Nightingale, who passionately desired the welfare of the Indian ryots, that the study of agricultural chemistry was now (1887) a reality at Oxford, and that the change was due to her. In another letter he regrets that "I have not been able to do so much as you expected of me." It was Mr. Jowett who exuberantly addressed her as "Florence the First, Empress of Scavengers, Queen of Nurses, Rev. Mother Superior of the British Army, Governess of the Governor of India." Amongst several flattering titles bestowed on her by Sir E. Cook one may note "the Advisory Council to the War Office." This biography shows the help Miss Nightingale rendered Mr. Jowett in the revision of Plato. "You are the best critic whom I ever had," he wrote. She gave him substantial help with his "School and Children's Bible," giving lucid reasons for the omission of some parts and

the inclusion of others. Classical scholars may note that she considered the stories of Andromache and Antigone worth all the women in the Old Testament put together.

The recent list of New Year honours, not one of which was conferred on a woman, recalls the fact that in 1907, when Miss Nightingale's faculties were greatly impaired, to the point that it is doubtful whether she realized the intended honour, King Edward conferred on her the Order of Merit, and therein her name appeared with those of Field-Marshal's and Commanders, several of whom had worked with her at the betterment of the British soldier's life. Sir Edward Cook holds that "a great commander was lost to her country when Florence Nightingale was born a woman."

CORRESPONDENCE.

SEX TEACHING IN GIRLS' SCHOOLS.

To the Editor of The Journal of Education.

SIR,—May we make use of your columns to express what we know to be the opinion of many teachers, namely, our satisfaction that a subject so important as the sex education of girls is coming to the front? It was a pleasure to be at the Education Conference at Bradford to hear the splendid addresses of Dr. Eurich, Dr. D'Ewart, and Miss Norah March, and it was also a pleasure to see the large attendance at the Sectional meeting. Those of us who were fortunate enough to be present learnt much that was valuable concerning the biological method of approach, and undoubtedly this is the right method. Any girl would be the better for working through a Nature-study scheme such as was given and explained by Miss Norah March. But besides the biological aspect of the subject, there is another side which must interest teachers, and that is whether definite sex instruction, including talks on sex hygiene, ought to be given in girls' schools. Here we must consider two points: (1) Shall definite sex-instruction (apart from and beyond the Nature-study course) be given in *all* girls' schools? (2) Who are the right people to provide for and arrange it?

Undoubtedly there are in the country many schools where the girls are taught by their mothers, and it seems to us that in such cases no further instruction from the school is needed. For the work of sex training belongs primarily to the mothers, and it is not the business of the school to take it from their hands when it is clear that they are doing it in the right way and at the right time. But there are also many schools where the parents are unable and unwilling to undertake such a duty, where also the children from their environment have early sex knowledge often acquired in the wrong way, and here it is the business of the school to take the matter in hand and arrange for definite "straight talks" with the girls. The mothers' consent in most cases is easily obtained; we must work with them and let them have full knowledge of our intentions; then we find that most of them are in full sympathy and become valuable allies.

The arrangements for this work may be difficult, especially in the case of mixed schools. The matter needs most skilful handling, and the greatest care and judgment must be exercised. The women on the Education Committee sometimes are invaluable helpers to the head mistress. Sometimes, too, the school has a woman doctor, who, when she is liked by mothers and children, turns out to be ideal for the task. But the important point is that the definite sex instruction of girls cannot be, and never ought to be, arranged for by the head master of a mixed school or formally by a committee. It is a matter that women (and medical men) alone can understand fully, just as it is the work of men to undertake the sex training of boys. We may say that we should not have considered this difficulty but for a case that came under our notice some time ago. A woman doctor had been asked to give some informal talks to the girls of a mixed school. The talks were to be given out of school hours, and the doctor wished certain arrangements to be made. The head master of the school, although knowing what the doctor wished, made his own arrangements, which were so unsuitable that she had to refuse the work altogether. We hope and believe this to be an isolated case, but it is sometimes necessary to take warning even from isolated cases.

If there is one type of school where the girls specially need careful sex instruction it is the mixed school. In such schools girls in their teens are often under a form master; they are in the same class with boys, and may have very few lessons from women teachers. The arrangement is undoubtedly a bad one, and the sole reason for its existence seems to be that in some country districts the numbers are too small to admit of two schools. The ideal of the co-educationist—that the mixed school leads to a healthy regulation of the sex emotion—is very possible in theory, but very often is not realized in practice. In such schools girls at the difficult age have often

practically no supervision from a woman at the time when it is most necessary.

If the committees responsible for such schools are educationists they will see that the women members and senior mistresses have a free hand in the most important and difficult work of these schools—the sex training of the girls.—
Yours, &c.,
LUCY HALL (Head Mistress),
IDA GRÜNBAUM (Science Mistress).

Pontefract and District High School for Girls.

[The most preposterous form of co-education is to be found in Welsh dual schools, where boys and girls are kept apart till they reach the head class consisting of half-a-dozen "back-fish" and as many hobbledheoys.—ED.]

CONVERSATIONAL LATIN.

To the Editor of The Journal of Education.

DEAR SIR,—I notice in a review on page 38 of *The Journal*: "Can we show a boy that Latin is a thing worth doing of itself? This is the weak point in Dr. Rouse's reformed method. Latin conversation is confessedly only a means to an end, and the boy cannot fail to ask himself: 'What good will it do me to pass the time of day or order my dinner in Latin?'"

As a matter of fact, he does not ask himself any such question. He is quite content with the pleasure of using Latin to express his thoughts, just as he is content with the pleasure of kicking a football, and in neither case does he trouble to ask further so long as he likes it. Your critic's remark is typical of all the criticisms I ever have to meet: he writes what he thinks will happen or ought to happen, without taking the trouble to find out what does happen.

It is typical also in summing up the Direct Method as "passing the time of day or ordering dinner." I do not know that there is any harm done if a boy can order his dinner in Latin; if he can, he will find many pages of Plautus easy to him by and by. But such trifles do not sum up even the daily use of Latin, which ranges over all sorts of things; nor does conversation include his whole method of practice and study. The same fallacy is seen in "U.U.'s" notes, with his cheap ridicule, and the contemptuous reference to Ascham and Erasmus. I should indeed be surprised to find any sympathy between those two great men and one whose temper is disclosed by another sentence: "It is a profound mistake to suggest new methods to old schoolmasters." Whatever you do, never venture to suggest that a schoolmaster may conceivably improve himself. Nor should you venture to form an opinion of your own; you need only ask whether a proposal "has evoked response from the older Universities and public schools." The first maxim, if sound, explains why it has evoked none, if that be the case.

Your own attitude, Sir, I have never been able to understand. It is not so that you treated the identical reform in French teaching. You may, and I think you do, believe that classics are unsuitable for school; I am ready to meet anyone straight on that question. But why you, or even "Old Schoolmaster," should ridicule any attempt to teach classics better I do not understand. It is the more unfortunate because the Direct Method simply transforms the teaching of Latin and Greek from something which I, at least, used to loathe to a perennial delight. I used to do it as a duty, which I hoped would bear fruit in after life, but the doing was dreary in the extreme; and having found out that, by a certain way of teaching, the dreariness disappears, I desire every one to share my good fortune. I am glad to say that a good many have done so.—Yours faithfully,
W. H. D. ROUSE.

Perse School, Cambridge, January 5, 1914.

PROF. CULVERWELL'S "MONTESSORI PRINCIPLES AND METHODS."

To the Editor of The Journal of Education.

DEAR SIR,—It is only in the last day or two that I have read any reviews of my "Montessori Principles and Practice," and I gladly acknowledge the very sympathetic character of your reviewer's

estimate. I cannot, however, understand his paragraph on the chapter on the "Character and Discipline." That he should find it "inadequate and disappointing" is, of course, a statement of fact which is not to be disputed, but I am quite at a loss to know why he should insist that moral training should not consist of dry advice. The sentence immediately following the statement that the chapter is disappointing is—"Morality is not necessarily unpleasant, nor should moral training consist of dry advice." It is possible that some reference to the actual course of evolution may have given rise to the first clause of the sentence; in which case the fault lies at the door of evolution rather than at that of the author. But, for the second clause, I cannot find any sentence in the book which could by implication bear the interpretation which the reviewer seems to have put on the chapter as a whole. Yet he writes further on that the author does not seem to realize that "the era of exhortation ought now to terminate." Yet I actually deprecate "exhortation." Page 295, I observe that in the Montessori discipline, "the moral control by which the higher personality is enabled to resist the antagonisms of the lower personality, or the demands of the physiological character, is obtained *not through exhortation* (the italics are not in the original) or through fear of punishment, or hope of reward, but by giving occupations in which the natural tendency is to secure the victory for the higher personality," and I add, as the next sentence, "This is the tendency of all modern education."

The discrepancy—or, rather, I should say the agreement—between the criticism and the matter criticized is so apparent that I can only wonder whether the reviewer had confused in his mind some other book. For the sentiments he expresses are quite as much mine as his.

One very minor point. Perhaps it is my fault that a misunderstanding arose on an earlier sentence: I said the *method* was based rather on knowledge than on intuition. He has taken this to mean that the *discovery* of the method did not require intuition, which he says I unconsciously admit. Here also his views and mine agree. Like him, I realize how great a part intuition played in Dr. Montessori's work, and have put the point more than once.—
Yours faithfully,
E. P. CULVERWELL.

Howth, January 21, 1914.

"THE LIVING PAST."

To the Editor of The Journal of Education.

DEAR SIR,—Will you pardon me for suggesting that your review of "The Living Past" hardly does justice to the book in one respect. The inference which any reader of the review would draw is that Mr. Marvin has been one-sided and partial, and that he has made a deliberate effort to ignore the part which Christianity has had in the evolution of society. Now it seems to me that he gives a much fuller recognition to this than you admit; but even if it were not so, I would still venture to question the fairness of your criticism. In reading the book to an intelligent girl, much to my own profit as well as to hers, I have always been careful to impress the limitations which the author imposed upon himself; it is an attempt to set forth the landmarks of growth in human progress as regards advance in knowledge, power over Nature and social organization; and it is, like all scientific books, mainly descriptive. The Christian reader can supply his own background for the process recorded, just as he can do so in reading a book on biological evolution. "The Living Past" is so valuable as a picture of the stream of human life, in some of its aspects—ever flowing onward, but with new springs bursting up in it here and there—that one reader at least hopes that many others will find the same pleasure and profit as he has gained from it.—I am, yours, &c.,

Horbury Vicarage, Wakefield.

H. A. KENNEDY.

January 15, 1914.

THE PHONETIC DICTIONARY.

To the Editor of The Journal of Education.

DEAR SIR,—May I be permitted to point out a couple of errors in your review of the "Phonetic Dictionary of the English Language," by Michaelis and myself (published in the January number of *The Journal*)? (1) The proper names—Raleigh, Couch, Baden-Powell, Gower, Cowper—stated by the reviewer to be missing are not missing; each is given in its proper place (or places). (2) The name of the joint author of the corresponding French Phonetic Dictionary is wrongly given in the review as Paul Pepys: it should be Paul Passy.—I am, Sir, yours faithfully,

DANIEL JONES.

[We regret the obvious misprint; and also the reviewer's unfounded criticism of omitted proper names, for which, not having the Dictionary at hand, we are unable to account.—ED.]

BELL'S NEW BOOKS.

BELL'S SIMPLIFIED LATIN CLASSICS.

Edited, with Notes, Exercises, and Vocabulary,

By S. E. WINBOLT, M.A.

Fcap. 8vo. With numerous Illustrations. 1s. 6d. each.

NEW VOLUMES.

THE AGRICOLA OF TACITUS. SALLUST'S CATILINE.

VOLUMES PREVIOUSLY PUBLISHED.

Caesar's Invasions of Britain.

Livy's Kings of Rome.

Simple Selections from

Cicero's Letters.

Caesar's Fifth Campaign (from

De Bello Gallico, Book V.)

Vergil's Athletic Sports.

Vergil's Taking of Troy.

A HISTORICAL COURSE FOR MIDDLE FORMS.

By B. L. K. HENDERSON, M.A., D.Litt., and P. MEADOWS, M.A.,
Assistant Masters at Haberdashers' Aske's School, Cricklewood. In Four
Volumes. Crown 8vo. 2s.

Vol. I.—**WESTERN EUROPE.**

Vol. II.—**THE ENGLISH NATION: INDUSTRIAL AND SOCIAL HISTORY.**

Vol. III (in preparation).—**CONSTITUTIONAL HISTORY.**

Vol. IV (in preparation).—**POLITICAL AND GENERAL HISTORY.**

Distinctive Features of this Course are:—

1. The plan for providing for the four years of middle school life between the ages of twelve and sixteen.
2. The careful adaptation of each volume to a year's school work.
3. The combination of outlines and passages from original sources.
4. The separate treatment of the important aspects of national history.
5. The employment of questions which will necessitate on the part of the pupil reasonable exercise of comparison and judgment.

A PRACTICAL COURSE IN ENGLISH.

By E. J. BALLEY, M.A., Whitgift Grammar
School, Croydon. 1s. 6d.

Designed to give the pupil a practical understanding of his mother-tongue and the use of it. The Second Part forms a generous compendium of Exercises in Analysis, Construction, Correction of Errors, turning Direct Speech into Indirect, and also a Set of Local Examination Papers in Grammar and Composition.

ENGLISH GRAMMAR.

By S. E. WINBOLT, M.A., and Rev. J. E. W.
WALLIS, M.A. Christ's Hospital. In Three
Parts.

Just Ready, Part I.—**A First English
Grammar.** By the Rev. J. E. W. WALLIS.
Cloth 1s.

This course is designed to give the "irreducible minimum" of English Grammar in as clear a manner as possible. It should prove invaluable to those who still believe in the virtue of formal grammar, but are unwilling to spend too much time on it.

PROBLEM PAPERS FOR PREPARATORY SCHOOLS. (ARITHMETIC).

By T. COOPER SMITH, B.A., Late Scholar of
University College, Oxford, Mathematical Master
at St. Peter's Court, Broadstairs. viii+108 pp.
1s. 6d.

A varied collection of original and simple problems, specially designed to enlist the interest of boys and girls through being selected from phenomena within their experience.

REPRESENTATIVE EXTRACTS FROM ENGLISH LITERATURE.

Chosen by W. H. HUDSON. viii+338 pp. 2s. 6d. net.

The already large numbers who are using Professor Hudson's "Outline History" have been awaiting this volume, which should prove invaluable for illustrating and amplifying his brilliant narrative.

A SHORTER ALGEBRA.

By W. M. BAKER, M.A., and A. A. BOURNE, M.A. 2s. 6d.

This book has been produced in response to many requests from teachers in Mathematics. It is in no sense a condensation of the same authors' "Elementary Algebra," but an adaptation expressly to suit the requirements of the following and similar examinations:—London University Matriculation, Cambridge Local Preliminary and the Pass Junior Examinations, Oxford Local Preliminary and Junior, &c., &c.

A FIRST NUMERICAL TRIGONOMETRY.

By W. G. BORCHARDT, M.A., B.Sc., and the
Rev. A. D. PERROTT, M.A., 2s. 6d.

Written to supply the growing demand for a textbook on Trigonometry suitable for the lowest classes of secondary schools, and to meet the recommendations of the Mathematical Association Committee on the "Teaching of Elementary Algebra and Numerical Trigonometry," 1911.

JUNIOR TRIGONOMETRY.

By THE SAME AUTHORS. Crown 8vo.
3s. 6d.

An enlarged edition of the above book, containing chapters on Identities, Equations, and compound Angles, will be found suitable for such examinations as the Cambridge and Oxford Junior Locals, First Class College Preceptors, Additional Mathematics of the Central Welsh Board, Oxford and Cambridge School Certificates, Scotch Leaving Certificate (Higher Grade), and the Lower Examination in Pure Mathematics of the Board of Education.

BELL'S SIXPENNY ENGLISH TEXTS.

Edited by S. E. WINBOLT, M.A., Christ's
Hospital, Horsham. Fcap. 8vo. With Bio-
graphical and Critical Introductions. Limp Cloth,
6d. each. A Glossary is given where necessary.

This series will be found to be very clearly printed in large type, and should prove of great service to those who prefer that English literature should be read rapidly from the plain text.

FIRST LIST OF VOLUMES.

*Poems by John Milton.—*Spenser's
"Faerie Queene," Book I.—*Poems by
Tennyson.—Selections from Byron.—
*Macaulay's "History of England," Chapter
III.—Gibbon's "Decline and Fall," Chapters
I to III.—Plutarch's Lives of Caesar and
Cicero.—*English Elegiacs.—*Selections
from Chaucer.—Kingley's Heroes.

The volumes marked with an asterisk are also
issued interleaved, at 1s. each, bound in cloth
boards.

ANCIENT HISTORY FOR SCHOOLS.

From the Earliest Times to the Death
of the Emperor Augustus.

By E. NIXON, late Head Mistress of the Junior
School, Ladies' College, Cheltenham, and H. R.
STEEL. Illustrated. 2s.

BRITISH CHURCH HISTORY

(TO A.D. 1000).

By the Rev. W. H. FLECKER, M.A., D.C.L.,
Head Master, Dean Close School, Cheltenham.
1s. 6d.

EARLY ENGLISH HISTORY FROM THE CHRONICLES.

By A. F. DODD, B.A., Greystoke Place, Train-
ing College. 1s. 6d.

THE KING'S GOVERNMENT.

A Sketch of the Growth of the Central Administration.

By R. H. GREYTON, M.A., Author of "A Modern History of the English
People." 2s. net.

A most valuable contribution to a much-neglected side of constitutional
development—that of the organs of central government, with special emphasis
on their wonderful expansion during the last one hundred years. An invaluable
book for the advanced student.

A Textbook for Advanced Students.

Crown 8vo. 2s. 6d. net.

THE GOVERNMENT OF MAN.

AN INTRODUCTION TO ETHICS AND POLITICS.

By G. S. BRETT, M.A. (Oxon.),

Associate Professor of Philosophy in the University of Toronto,
formerly Professor of Philosophy at the Government College, Lahore.

London: G. BELL & SONS, Ltd., Portugal Street, Kingsway, W.C.

MACMILLAN & CO.'S LATEST LIST.

MATHEMATICS AND SCIENCE.

Exercises in Mathematics. By DAVID BEVERIDGE MAIR, M.A., sometime Fellow of Christ's College, Cambridge. With Answers and Hints, 4s. 6d.; also without Answers and Hints, 3s. 6d.

A First Book of Practical Mathematics. By T. S. USHERWOOD, B.Sc. (Lond.), A.M.I.Mech.E., and C. J. A. TRIMBLE, B.A. 1s. 6d. [First Books of Science.]

THE SCHOOLMASTER.—"A course dealing with those parts of the subject which are of real practical value. It forms a thorough groundwork which should be of value to all young students, especially to those who are to proceed to scientific work. It also forms a good preliminary course of training for engineering students."

Practical Mathematics for Technical Students. Part I. By T. S. USHERWOOD, B.Sc. (Lond.), A.M.I.Mech.E., and C. J. A. TRIMBLE, B.A. 3s. 6d.

Exercises in Algebra: from A New Algebra. Parts I to IV. By S. BARNARD, M.A., and J. M. CHILD, B.A. 2s. 6d.

SECOND EDITION, REVISED AND ENLARGED.

Practical Geometry and Graphics for Advanced Students. By JOSEPH HARRISON, Wh.Sch., M.I.M.E., &c., and G. A. BAXENDALL, H.M. Inspector of Technical Schools and Classes. Second Edition. Revised and Enlarged. Adapted to the requirements of the new (1912) Syllabus of the Board of Education, Whitehall. 6s.

Practical Surveying and Elementary Geodesy. Including Land Surveying, Levelling, Contouring, Compass Traversing, Theodolite Work, Town Surveying, Engineering, Field Work, and Setting out Railway Curves. By HENRY ADAMS, late Professor of Engineering at the City of London College, M.I.C.E., M.I.M.E., &c. Illustrated. Globe 8vo. 4s. 6d. [The Guardian.]—"A first-rate work for beginners and students, and upon eminently practical lines. Mr. Adams is a surveyor and teacher of long experience, and the practical touch is evident throughout."

SECOND EDITION, THOROUGHLY REVISED.

Practical Exercises in Heat. Being a Laboratory Course for Schools of Science. By E. S. A. ROBSON, M.Sc. Second Edition, thoroughly revised. Globe 8vo. 3s. 6d.

ENGLISH.

The Shorter Modern Dictionary of the English Language. Over 27,000 Entries, including Words, Phrases, Abbreviations, Foreign Words and Phrases, all arranged in one alphabetical order. 380 pp. cloth boards, 1s. net; limp cloth, 1s.

ENGLISH LITERATURE FOR SECONDARY SCHOOLS.—New Volumes.

Wanderings in Spain, selections from "The Bible in Spain" of George Borrow. With Introduction, Notes, &c., by F. A. CAVENAGH, M.A., Fellow of University College, London, &c. 1s.

Scott's Tales of a Grandfather. Second Series. Abridged and Edited for Schools by J. HUTCHISON. With Frontispiece. 1s.

Sertum: A Garland of Prose Narratives. Selected and Edited by J. H. FOWLER and H. W. M. PARR. Book I. Sixteenth to Eighteenth Centuries. With Frontispiece. 1s.

ENGLISH CLASSICS.—New Volume.

Scott's Guy Mannering. With Introduction, Notes, &c., by R. F. WINCH, M.A., Author of "Notes of Macaulay's 'Essay on Boswell's Life of Johnson,' &c." 2s. 6d.

POCKET SERIES OF ENGLISH CLASSICS.—New Volumes.

Sense and Sensibility. By JANE AUSTEN. Edited, with an Introduction, Notes, and Queries, by EDWIN L. MILLER, A.M. With Frontispiece. 1s. net.

Boswell's Life of Johnson. An Abridgment with Annotations by the Eminent Biographers and an Introduction and Notes by MARY H. WATSON, A.M. With Frontispiece. 1s. net.

The Mill on the Floss. By GEORGE ELIOT. Edited, with Introduction and Notes, by IDA AUSHERMAN, A.B. With Frontispiece. 1s. net.

THE TUDOR SHAKESPEARE.—New Volume.

The Facts about Shakespeare. By Prof. W. A. NEILSON, Ph.D., and Prof. A. H. THORNDIKE, Ph.D. With Frontispiece. 1s. 6d. net.

FRENCH AND GERMAN.

Victor et Victorine. Par Madame J. G. FRAZER, Auteur de "Émile et Hélène," &c. Dessins de H. M. BROCK. 1s.

EDUCATIONAL NEWS.—"This is a really charming book for quite young beginners. . . . The illustrations are really delightful. Mrs. Frazer's name is sufficient to recommend it in any case."

Laurette; ou, le Cachet Rouge. Par ALFRED DE VIGNY. Adapted and Edited by J. L. BURBEY, M.A. 1s. [Siepmann's Primary French Series.]

Die Erhebung Preussens gegen Napoleon im Jahre 1813. Von GUSTAV FREYTAG. Edited with a selection of Original Documents and Poems of the Time. By OTTO SIEPMANN. 2s. 6d. [Siepmann's Advanced German Series.]

Word and Phrase Book to same. Sewed, 6d. **Key**, 2s. 6d. net.

CLASSICS.

Sophocles in English Verse. Part II. **Aias, Electra, Trachinian Maidens, Philoctetes.** By ARTHUR S. WAY, D.Litt. 3s. 6d. net.

GEOGRAPHY.

A Junior Geography of the World. By B. C. WALLIS, B.Sc. (Lond.), F.R.G.S., &c. With Maps and Illustrations. 2s. 6d. [Macmillan's Practical Modern Geographies.]

SATURDAY REVIEW.—"The book is the most thorough thing of its kind we have yet seen; the maps, diagrams, and illustrations are of unusual number and excellence, and it bristles with exercises."

The Continent of Europe. By LIONEL W. LYDE, M.A., F.R.G.S., Professor of Economic Geography in University College, London. With Maps, 7s. 6d.

THE TEACHER'S WORLD.—"Professor Lyde's book is a most important contribution to geography. It interprets geography as a study of human environment. It has a vigour of style, a picturesqueness of expression, and a precision of statement which endow it with high literary qualities. It is almost a prose epic of human endeavour."

Entrance Scholarships in Arts and Science are awarded annually in June.

Full particulars on application to the PRINCIPAL.

MADAME

BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studios, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

The opening up of a NEW CONNEXION is very desirable.

If particulars of YOUR SCHOOL are included in the next issue of

PATON'S LIST of SCHOOLS and TUTORS

they will be seen by many thousands of Parents, not only in this country, but all over the world.

THIS BOOK secures for its advertisers a far larger proportion of *definite results* than any other publication of its kind.

"The majority of my boys come, of course, from personal recommendation, but I may say that of those who come as a result of advertising, practically all have heard of the School through your List of Schools."

"I advertise in your book because I have found it of great use to me, and the best possible way of making my School known."

"I consider that your book fills an awkward gap, especially in cases where Schools do not go in for general advertising."

"I have recommended my Governors to continue our advertisement in your book because it appears to be a useful medium for bringing this School before a large number of people whom it would be impossible to reach personally."

The SEVENTEENTH Annual issue is now being prepared for Press.

SPECIMEN COPY, with full particulars and proof of value to clients, will be forwarded to Head Masters or Head Mistresses on application to

J. & J. PATON, Educational Agents,
143 CANNON STREET, LONDON, E.C.

Telephone, 5053 Central.

THE PROBLEM

OF

EFFECTIVE SCHOLASTIC
ADVERTISING

AND ITS SOLUTION.

This booklet will be sent,
post free, to Principals of
Schools on application to

J. & J. PATON,

143 CANNON STREET,
LONDON, E.C.

**Does your Prospectus do
justice to your School?**

Does it give to the Parent at a distance an adequate idea of
the special merits of your establishment?

WE PRINT PROSPECTUSES

for a large number of the best Schools in this country,
and shall be pleased to send you specimens of our work
with suggestions for the improvement of your own.

WE UNDERTAKE

the entire production, including the taking of Photo-
graphs and making of Blocks.

WE ALSO SUPPLY

REPORT FORMS,
ACCOUNT FORMS,
HEALTH CERTIFICATES,
APPLICATION FORMS,
MAGAZINES,
TESTIMONIALS, &c.

Please write us for Specimens.

J. & J. PATON,

143 CANNON STREET, LONDON, E.C.

Messrs. J. & J. PATON

EDUCATIONAL AGENTS,

143 CANNON STREET,
LONDON, E.C.,

Beg respectfully to inform Head Masters
that they have opened

A NEW DEPARTMENT

for the supply of

ASSISTANT MASTERS.

Head Masters are invited
to send particulars of their
requirements to

Messrs. J. & J. PATON,
who give intelligent and
prompt attention to every
inquiry.

TRANSFERS AND PARTNERSHIPS NEGOTIATED.

The Strictest Confidence Observed.

Mr. J. H. PATON,

OCCASIONAL NOTES.

THE formation of an Education Society distinct from but in close connexion with, the Teachers' Guild has advanced a step. A Special Committee has drafted a scheme to be considered on the 7th inst. at a conference of delegates from the various Education Societies summoned by the Guild. We are not at liberty to publish the draft scheme, which will doubtless be modified, but we may indicate the general purpose and scope of the Society. It is intended at once to be a learned Society for research and at the same time to serve as a clearing house for the varied Associations which held their several meetings last January at the University of London. It also would include administrators, members of Education Authorities, and the nondescript, but important, contingent who may be described as unattached educationists. All who attended the January meetings must have felt the need of such a common centre. Each subject was necessarily treated from a special standpoint, and, valuable as the discussions were, they produced little effect on the public, who were confounded by the multitude of counsellors, and shrewdly suspected teachers who had each and all their own axes to grind. The obvious objection brought is that there are already too many societies, and that few teachers can afford either the time or the money to join another. The answer is that a clearing house may prove a saving both of time and money. There is no reason why a lump subscription might not make a member free of the various branch societies, and if a suitable habitation were secured, all the business of each could be then transacted by one or two clerks. The main work of the Society would be carried on by special committees and communicated to members by

bulletins and a yearly volume of transactions. We hope that at the meeting of the 7th the project will receive sufficient support to justify the Teachers' Guild in embarking on this its latest development. It is the one body that embraces and represents, however inadequately, all sorts and conditions of teachers.

THE two London Head Masters who opened a discussion on the scheme for training teachers in secondary schools at a Teachers' Guild meeting the other day did not seem much enamoured of the project. Their speeches rather suggested the mental attitude of the French officers who went into the battle of Waterloo, *sans peur et sans espoir*. They evidently regarded the Board's proposals as a despairing attempt to solve an insoluble problem. We are not surprised at their hesitancy. We cannot imagine that there are many head or assistant masters who are prepared to arrange for a teacher in training "a systematic course of study both in the practice and principles of teaching," which is what the regulations require, and to help him through it. Most masters will certainly feel that they have enough to do in teaching boys, without having the additional burden of teaching others how to teach laid upon them. And, to look at the matter from another point of view, merely to observe and learn the methods of one or two particular teachers is such a poor and meagre form of training that it is hardly worth the name.

NEVERTHELESS, as there is no immediate prospect of the country being dotted with training colleges for secondary teachers, it may be well to see what can be made out of the Board's plan. It is really a plan for an apprenticeship, and should be frankly described and accepted as such. The teacher in training will learn the rudimentary technique of his craft, just as the student-teacher learns, or used to learn, in an elementary school before he goes to college. It is a foundation on which something may hereafter be built. One thing we should like to see growing out of it is a staff college, to which the abler and more thoughtful of our young teachers could go after they have had a few years' experience of school work and have got some idea both of their own weak points and of the weak points of the education that their school gives. Entrance to such an institution should be restricted to those who are likely to profit from the advanced study of education. We clearly cannot expect training colleges for all: may we not, however, hope for one for the best of our men?

AN interesting, though little noticed, discussion at the January meetings was that on demonstration schools, in which Prof. Nunn and Prof. Findlay took part. The former is just bringing such a school into being; the latter has had many years' experience of the institution. Parents are seldom impartial judges of their own children, and both the professors had nothing but good to say of the system. Demonstration schools have, indeed, elements of great value in them. The staff of the training college can control not only the methods employed, but, what is quite as important, the curriculum. It is too frequently forgotten that tyros have to learn not only how to teach, but also what to teach, and we fear that the elementary schools in which students practise are not

always certain to give them sound notions on this point, certainly so far as such subjects as history and literature are concerned. On the other hand, demonstration schools must always have something of a conventual nature about them, and the virtue fostered therein is likely to be of a cloistered kind. We are inclined to think that some work in the rough and tumble of an ordinary elementary school should always form part of a student's training, even if he has the opportunity of attending a demonstration school.

TWO articles in the *Morning Post* on "Commercial Education" by Dr. Spenser are a welcome contribution to a little understood subject. No one is more

Commercial Education.

competent than the Head Master of University College School to speak on the topic. The general result of his remarks seems to be that a good commercial education—at least, in schools—differs from a good general education about as much as a Christmas pudding differs from a plum pudding. Commercial history, geography, and arithmetic are dismissed with scant courtesy. Commercial French and German are bowed out more ceremoniously, but not less decisively, but the thorough teaching of languages is strenuously insisted on. What remains comes mainly to this: stress on the economic side of geography and history for all boys, economics, the principles of accountancy and the materials of commerce for those who remain at school till seventeen, and some advanced subjects, such as the Law of Contract, for what the author calls "supra-matriculation" classes. Type-writing and shorthand are, of course, given a place. We do not know why gymnastics are particularly mentioned in his syllabus, nor why our future business men ought to learn more about the British Constitution than the rest of us need to know.

THE moral we draw from all this is the very old one that the business of school education is not to give technical training, but to form mind. What is wanted

Roots, not Fruits.

for the boy who is going to pursue a business career is not particular accomplishments so much as brains and backbone, and the capacity to learn. It is the possession of this latter capacity, indeed, which is the real test of the success of schools. If some forms of education which have been much in vogue are now being discredited as a preparation for life, it is not, or it ought not to be, because the subjects taught are useless, but because either the subjects themselves or the methods by which they were learnt produced an inelastic, wooden type of mind, that lacked versatility, and failed when confronted with problems unlike those to which it had grown accustomed in the classroom. To all business men who complain of the ignorance or incapacity of schoolboys we would say, whether the boys come from Whitechapel or from Winchester, that the real question is not what do these boys know, nor even what can they do, but can they learn quickly and efficiently?

THE Report of the Irish Viceregal Committee of Inquiry into certain matters connected with Irish National Education has been published. The Irish

Irish Elementary Education.

National Teachers' Organization overcame at last their objection to appearing before a Commission sitting in private, and their evidence was a very important contribution to

the Report. One of the matters into which the Committee had to inquire was the method of inspection and the system of increments and promotions, which is closely connected with it, and on which we commented a short time ago. We are glad to see that on these points drastic changes are recommended. The system of merit marks to schools and teachers should be abolished, increments should be annual and automatic in the absence of an adverse report—the only workable system, as we pointed out—and teachers should have a right of appeal to the Board in grave cases involving dismissal. We hope the recommendations will be carried out. It is high time that the system of treating Irish teachers as if they were school children was abolished.

THERE are many points of some importance in connexion with the training of secondary teachers which have not been much discussed, but which head masters will have to confront. One of these is the number of subjects which a master or mistress should be expected to teach. Here there can be no fixed rule, but we may suggest that so far as the humanities are concerned, the principle that they are all interconnected should be kept in mind. Clearly this cannot be interpreted to mean that every master and mistress should be expected to teach two or three languages, history, and geography, all up to a high standard, but it should mean that every teacher should be required to give evidence of having mastered the rudiments of all, and of ability to give some degree of instruction in all. For those who aspire to teach the highest classes in two or more, the question arises, what are the best combinations? French and German is the commonest; is it the best? Everybody knows the difficulty of maintaining a high standard of efficiency in two modern languages. We fancy that many teachers might do better to profess one foreign language only and add to it history or some other subject which can be kept up by reading. But the question is too large and complicated for a note, and we hesitate to express a decided opinion.

"Façh" Teachers.

THE Simplified Spelling Society has proceeded from a demand for a corrected spelling to a demand for a standard pronunciation. On the Society's principles, indeed, the one follows inevitably on the other. How can you arrange a system of spelling to represent the sounds of a language before you have settled what those sounds are? Hence the Society now asks that Yorkshiremen and Irishmen, Scotchmen and Canadians should all be required to pronounce English in exactly the same way, under pain of being pronounced ill educated people, not fit for polite society. The ideal to be aimed at is uniformity and monotony. How the pronunciation thus artificially fixed is to be rendered immune from that liability to change to which everything human is subject we are not told. Perhaps there will be a bureau in Great Russell Street which will admit changes cautiously and wisely. The scheme will not, we fancy, appeal to many people. Much centralization we must in these days do our best to put up with, but against the centralization of language we may fairly kick. With Mr. Ashbee, we would ask why the people of Hampshire should not be allowed to retain their beautiful and sympathetic dialect. We sympathize with local peculiarities of speech as we sympathize with everything which

Uniformity in Pronunciation.

makes for local life. Even more do we sympathize with the peculiarities of Colonial speech, for they are the mark of nationality, and, like all outward characteristics, aid and support the nationhood that they mark.

THE *Modern Language Review* is a *Fach* journal which appeals almost wholly *ad clerum*, but in the current number there is an article by Mr. J. Lawrence on "English Pronunciation" which should interest all teachers. Mr. Lawrence is an ardent spelling reformer, and hopes to see a phonetic dictionary of the English language universally adopted, but he objects to making, as does Mr. Daniel Jones, the speech of educated Londoners the standard, and would substitute the current pronunciation of the upper classes—men and women educated at the public schools and Universities—throughout the Kingdom. A Central Committee, with local branches, should sit "to provide the true Attic standard of our tongue." What here concerns us is, first, his admission that such a standardization will not, as the Poet Laureate thinks, arrest the process of "degradation." The approximate phonetic spelling of our forefathers did not arrest the change from the language of Alfred to that of Chaucer. Secondly, he argues that any phonetic system, if it is to stand a chance of general adoption, must be content with approximations. Dr. Bridges' fifty-eight symbols are confessedly imperfect, and they are too many for the reader. The New English Dictionary aims at absolute accuracy, and employs a century of symbols, but, as is shown in pages of instances, it is not self-consistent. The moral we draw is that spelling reform must proceed slowly and by degrees, and, in the meanwhile, we would plead for *tolérances* the same latitude that was allowed to the Elizabethans. It is absurd to make of spelling a fetish, as do the Civil Service Commissioners, and pluck a candidate for writing "preceed," "procede," "potatos," "folioes," "program," "epigramme."

MR. DENMAN introduced an Employment and School Attendance Bill into the House on the 20th ult. We can speak of the measure only as it appears in the speeches of the promoters. It is based largely on Local Option. Two important powers are given to Local Authorities, to raise the leaving age to fifteen, and to require attendance at continuation schools. This probably means that the Local Authorities would have to choose between spending money on giving children an extra year of schooling and spending it on continuation schools, for it is certain that under present financial conditions few authorities would be able to indulge in both luxuries. We are inclined to think that on the whole continuation schools are the more urgent need of the two. To raise the school age to fifteen would merely touch the fringe of the great problem how boys and girls are to be helped, guided, and taught through the critical period of adolescence. Moreover, as was pointed out in the debate, the addition of another storey to the elementary school would entail considerable structural alterations in the whole of the upper part of the building. In plain English the work of the highest standards would have to be improved.

TWO important clauses are compulsory—that which prohibits street trading for boys under fifteen and girls

under eighteen, and that which practically abolishes the half-time system. The first suggestion met with no opposition, except from the full-blooded and old-world Toryism of Sir F. Banbury. Tired children, we must all agree, are as useless in school as hungry children. The boys who have spent a couple of hours or more delivering milk or newspapers before they come to school are the despair of the teachers. The half-time question excited more difference of opinion. The principle of abolition is sound enough, no doubt, but abolition in the rural districts would certainly have to be accompanied by some extensive changes in the curriculum. Boys who have to live on the land must in some way or other get into contact with the land before the age of fifteen. Things are, however, moving in the right direction, and we are glad to hear from Mr. Trevelyan that every county in England and Wales, except two, provide instruction in gardening for schools that require it, and that more and more schools are requiring it.

THE strike in Herefordshire is well under weigh, and we read of empty classrooms and picketed schools. The Salaries Committee of the County Authority met the representatives of the National Union of Teachers, but bluntly refused to accept the scale the latter proposed. As we go to press, however, we read that a Special Committee of the Authority has drawn up a scale. If this be true—and we earnestly hope that it is—it means that the teachers have won the principle for which they are fighting, and, the doctrine of the scale being accepted, an adjustment of the rival figures ought to be possible. Meantime we rejoice to see the widespread interest that the struggle is exciting. It has done more to call attention to the scandal of rural teachers' salaries than many years of talking. We cannot help thinking that some militant associations of secondary teachers must be wishing that they had the power to bite as well as the capacity to bark.

BUT the action of the Herefordshire teachers will do more than call attention to the just demands of teachers. It will help to bring to the front the urgent question of the poorer areas. The burden of the rates in some of these is growing very heavy, though we do not know that Herefordshire is one of those where the load is heaviest; and one of the objects of the next Education Bill must be to make further provision for help from the Exchequer for these needy districts. We are glad to note that the Prime Minister has practically stated that the Government contemplate increasing the proportion of the cost of education borne by the State. One word more only on this subject. A question in the House of Commons has elicited the astounding information that 858 supplementary women teachers receive less than £25 a year for full-time employment, 4,872 less than £35 a year, and 10,434 less than £45 a year. Before figures like these comment is dumb.

THE eighteenth Annual Conference of the Parents' National Educational Union will be held at Darlington, March 9 to 12. Among the lecturers and speakers are Mr. Sadler, Prof. Campagnac, and Mr. H. Pike Pease, M.P.

LOCAL AUTHORITIES.

THAT there is a falling off in the supply of intending teachers is a recognized fact; it is not, however, generally recognized that the schools are, the falling off notwithstanding, considerably better staffed than they were eight years ago. Here is a comparison between 1904-5 and 1911-12:

	1904-5.	1911-12.
Number of Scholars on the Registers ...	5,645,089	5,618,030
Certificated Teachers:—		
Trained Men	18,111	23,016
Trained Women	21,793	32,481
Non-Trained Men ...	7,888	8,982
Non-Trained Women	26,250	32,625
Uncertificated Teachers:—		
Men	4,855	4,813
Women	33,495	34,312
Supplementary:—		
Men	34	—
Women	17,518	12,249

It will be seen from these figures that, while the number of scholars on the registers is rather less, the number of certificated teachers has increased by more than 30 per cent. The statistics of successive years clearly indicate a tendency on the part of teachers not only to become fully certificated, but also to be trained. Consequently the staffing problem of the future will be concerned chiefly with small schools.

ANOTHER interesting Return issued by the Board of Education shows in a convenient form the number and distribution of small schools in England and Wales. The total number of school departments in England and Wales is 32,234, and of these 11,972, maintained by Local Authorities, have an average attendance not exceeding a hundred children. Of this total over 90 per cent. are situated in county areas. As it is pointed out in the Return, the existence of a number of small schools in an area has a very direct bearing upon problems of staffing and upon the financial position. It is all very well for educationists in Utopia to demand the abolition of uncertificated and supplementary teachers, and urge the employment of the fully qualified. But the head teacher of a school with sixty or seventy children would generally prefer the help of an uncertificated assistant and a supplementary teacher if the alternative was a certificated assistant.

THE Surrey Education Committee has considered a special report on the supply of teachers, which in that county is evidently a serious question. In 1908-9 the number of pupil-teachers and bursars was 138; in 1913-14 the total decreased to 33. It is estimated that in the county of Surrey, without making any additional allowance for the shortage in the supply during recent years, 168 intending teachers should be available. The Committee attributes the decline in the number of entrants to the following causes: the change in the system of preparatory training, under which the wage-earning age has been postponed, the growing competition of other forms of lucrative employment, the charges made by the National Union of Teachers in 1911 that the actual supply of teachers exceeded the demand. It is suggested that, under present economic conditions, the majority of intending teachers must be drawn from the elementary schools, and the opinion is expressed that the solution of the problem lies in the direction of (1) making the earlier stages more attractive, and (2) increasing the salaries paid to teachers.

THE Board of Education having stated that they are prepared to consider proposals for the preliminary education of elementary-school teachers by systems other than pupil-teachership or bursarship, and if they approve to make grants in aid of any expenditure incurred, the Surrey Committee has made an interesting suggestion. It proposes the training of girls of the supplementary teacher class with a view to their employment in infants' schools, and in the lowest classes of small upper schools, as junior assistant teachers. Candidates for appointment would be women over eighteen years of age, who have passed a special qualifying examination conducted by the Committee. The suggestion has been submitted to the Board for their consideration.

THE Derbyshire Education Committee have also had under consideration the question of the increasing difficulty of obtaining teachers. The Committee believe that the deficiency is not due to a want of "natural supply," but rather to the difficulties attending the regulations of the Board of Education. The committee do not approve of paying children to attend secondary schools on the expectation or promise that they will become teachers, and they have submitted various proposals to the Board with a view to meeting the special conditions in different parts of their area. It is suggested that candidates should be accepted in certain districts served by secondary schools from the time when they are legally exempt from attendance at an elementary school. These candidates would divide their time equally between the elementary and the secondary schools. It is also suggested that in other districts preparatory classes should be arranged for candidates unable to attend secondary schools and further an adaptation of the Board's new regulations with a view to enlisting recruits in rural districts.

THE Northumberland Education Committee has recently adopted a revised scale of salaries for teachers which is estimated to involve, when fully in operation, an additional expenditure of a rate of 1d. in the pound. It is intended to benefit chiefly the position of men certificated assistants and the head masters of small schools. The maximum of assistants has hitherto been £120, with an addition of £10 for first assistant teachers. Under the new scale the maximum is raised to £140 and £150 respectively. The remuneration of a head master in a school with over thirty and under sixty scholars in attendance rises by increments from £110 to £145.

SCIENCE NOTES.

THE London Branch of the Mathematical Association has the Astronomer Royal as its president for the present year. In his inaugural address on February 7 Dr. Dyson drew attention to the ignorance of the "educated" classes with regard to the easily observed movements of celestial bodies. In urging that the subject of astronomy is worthy of attention in school, the President was supported by the audience, as was made clear in the subsequent discussion. The difficulties being mainly those of forming proper spatial concepts, the task of overcoming these difficulties might well be undertaken by the mathematical teacher.

CLOSELY related in a pedagogic sense is the general question of solid geometry. Many difficulties of the mathematical and physics lessons would be reduced to quite small dimensions if young children had tactile experience of geometrical solids. Some children have such experience in the nursery, and it would be interesting to inquire of what proportion of our Wranglers this was true. In any case some model making in the mathematical class is desirable, and Mr. Abbott gave an excellent demonstration of such work. A feature of the demonstration was the exhibition, not of work of selected boys, but the work of every boy in the class; and the audience—mainly of experienced teachers—was clearly impressed with the good quality of the worst. Even more important than the satisfactory manipulation was the evidence that the individual boys had been induced to think.

THE question of the tensile strength of cell-sap has an obvious bearing on the problem of that rise of sap which is just now making its influence so delightfully evident to all observers of our burgeoning trees. It is therefore peculiarly opportune that Prof. H. H. Dixon should bring his researches before the Royal Society, by which he showed that cell-sap could sustain very considerable tension, in one case reaching 208 atmospheres. It is, of course, not suggested that such tensions ever arise in a growing tree; but it may be noted that the sap was centrifuged from the branches of trees, and was almost, if not quite, saturated with dissolved air.

THE action of sodium on water is one of the most "tricky" experiments which teachers of the elements of chemistry have to perform. The "shute" method is quite safe; the method of using a

spoon or, worse still, of putting the sodium into compo pipe, is highly dangerous. Roscoe recommended the use of sodium amalgam, but its action is not very reliable—at least, such has been the writer's experience. Prof. H. B. Baker and L. H. Parker explain the vagaries of the substance in a recent contribution to the Chemical Society's *Journal*. It appears that distilled water is sometimes free from hydrogen peroxide, and that this substance must be present in order for the reaction to occur at a useful rate. Ordinary tap-water usually contains sufficient peroxide to enable the evolution of hydrogen to be shown to a class; but calcium is now safer, cheaper, and more convenient, and in some ways more instructive than sodium.

A New Electric Incandescent Lamp.
At the Royal Institution Dr. J. A. Harker exhibited a lamp which is a definite advance in electric lighting. One source of leakage of energy (and consequent loss of light) from incandescent filaments is the emission of charged particles. This emission is

checked by the presence of nitrogen at atmospheric pressure, and thus the temperature of the filament is raised about 200 degrees, resulting in a 600-candle power lamp, which consumes about half a watt per candle. The leads are made of molybdenum; this is the first utilization of the metal which we can call to mind.

Lantern and Screen.
LAST month we referred to the L.C.C. advice on the management of the limelight, and a recent experience in a Council School has pointedly reminded us of the need for advice as regards material for a screen. The requisite qualities of a good screen are (1) opacity, (2) minimum absorption of light, (3) minimum specular reflection, (4) maximum diffusive reflection. Plaster of Paris and magnesia alba are the best materials; good whitening or lime-wash is also very good. Plain white ceiling-papers are very cheap and good, and provide an easily applied facing-material for walls or calico. Linen is quite bad; about half the light goes through and is lost.

The Solar Eclipse of 1914.
THE railway and steamship companies are beginning to advertise cruises to witness the total solar eclipse which will occur on August 21. At Greenwich two-thirds of the disk will be in shadow; the line of central eclipse, crossing Norway north of Trondheim, will pass through Riga, the Crimea, Baghdad, to the delta of the Indus. Particulars can be found in Whitaker's Almanack.

Public Schools and Medical Study.
IT will be remembered that the Public Schools Science Masters Association always contended that the Public Schools should be recognized as training their pupils in the purely scientific studies preliminary to a medical course. We are glad to notice in the recent annual report strong testimony from Sir Clifford Allbutt that the alteration made in the Cambridge regulations in the sense urged by the P.S.S.M.A. has had most satisfactory results. The number of candidates passing the first M.B. Examination has increased simultaneously with a rise in the standard required for a pass.

FREE COMPOSITION.*

WHAT you will hear in the quarter of an hour allotted to me must not be mistaken for a sample of Free Composition. It was reluctantly and with much hesitation that I accepted the task imposed on me by the Committee. I seemed to myself like one of those primitive cannons, a relic of the Civil Wars, preserved on the city walls and dragged down on a jubilee day to be fired off with blank cartridge, at some risk to the gunner from bursting, but none to the audience, who, like Iapix, will mock at the *inania murmura*, the sound of little meaning, though the words are strong. Even could I boast like Horace that in my day I had "militated not without glory," yet it is high time to hang up my rusty arms in the Jehangier Hall beside the statue of our President, Sir Henry Miers. Yet since my retirement from teaching I have had some opportunity as an inspector and an examiner of observing the work of other teachers, and my

observation has confirmed and strengthened some conclusions to which my own experience had led me and which, hide-bound as I was by tradition and routine, I rather preached than practised.

You must pardon me then if I take an old sermon from the tub and refurbish it with some modern instances for the occasion. In particular, I think I shall be safe in plagiarizing from an article that I contributed in 1911 to "The Teacher's Encyclopædia," for I have never yet come across a teacher who had read it. In it, after banning as heartily as Prof. Viëtor or Mr. Rippmann could desire the old method of composition teaching—Ollendorff, followed by a page of Addison or Macaulay, to be turned, with or without help, into French—I proceed to commend unreservedly the oral practice of Free Composition, beginning with simple answers to questions and leading on to a continuous description of a picture or an incident, or a paraphrase or précis of what had been read in class or out of school. At the same time I hold that the pendulum has swung too far, that no one can pretend to know a foreign tongue till he is able to express in it not only his own thoughts and sentiments, but the thoughts and sentiments of others, and that not in a rough paraphrase, but in a form that represents, as far as a copy can, the language and style of the original.

So far, I take it, the New Methodists would not dissent, but here we part company. They maintain that this higher form of composition is not a school exercise, but suited only for the University student, and, if practised at all at school, to be reserved for the highest class as an occasional diversion. I hold, on the contrary, that it should be begun in the middle forms, concomitantly with Free Composition; that the exclusive use of Free Composition is intellectually pernicious; that it encourages glibness and rhetoric at the expense of clarity and precision, tempts a pupil to evade difficulties, to think less of what needs to be said than of how he best can say it. The pupil who has been bred on Free Composition will distinguish himself at the *table d'hôte*, and be able to converse on Shakespeare and the musical glasses, or to pen a pretty letter to a French lady; but in the serious business of life it will have prepared him for no other occupation save that of the courier and possibly the *commis voyageur*. For the Foreign Office, the diplomat or attaché, for the corresponding member of a learned society, for the clerk for foreign affairs in a bank or a house of business the essential requirements are accuracy and precision, not fluency or facility.

But the main point that I wish to bring before you to-day is one that I am emboldened to throw down as a challenge, and which I hope will be taken up and provoke a lively, if not a heated, debate.

Free Composition is not a suitable subject for external examinations—I would add as a saving clause, as they are generally conducted in England. If, as on the Continent, all examinations were partly oral and partly written, and no candidate could pass without the oral test, it would be a different matter. But in England, as a rule, there is no *viva voce*, or if there is one, it is optional and counts for little. For juniors—children between the age of thirteen or nineteen, as the Board of Education has wisely decreed—there should be no external examination. Of Junior Locals, Second and Third Class, Preparatory, &c., I would make a clean sweep, and for all Seniors I would insist on an oral test.

In preparing this paper I chose as typical the examination papers in French set by the College of Preceptors, because (to be candid) this needed no research, and those for the last ten years can be purchased in a fascicule. A rough analysis of the sixty subjects set shows the following results. Nineteen demand description. "Holidays" (the holidays, a holiday, a half-holiday) head the list (seven). Next come the "Four Seasons" (six, if Christmas Day is reckoned in). Next in order are several groups of subjects, not identical, but closely allied: (1) "Games"—cricket, football, or hockey; "Your Favourite Sport or Study," "Your Hobby." (2) "School"—a description of classroom, examination room, the situation of the school. (3) "Animals"—dog or cat, with an anecdote; tame or wild; dog or some other animal. (4)

* An address delivered by Mr. Storr before the Modern Language Association at the Conference of Educational Associations, January 7, 1914.

"A Seascape, or the Seashore." (5) "Aeroplanes"—including modern inventions. (6) "Literature"—any well known French or English writer, any book in English or French you have read, any incident or person from a French book. (7) Any accident you have seen, read, or heard of. This analysis covers roughly fifty out of sixty of the subjects. The remaining ten I might pass over as exceptions or freaks, but I will notice two as models for examiners. One is to continue the story partly told in the version. This form of question admits of countless variations and is fair to all the candidates. [*Per contra*, the questions on various kinds of fishes unfairly favours a candidate who happens to have learnt by heart a vocabulary of fishes.] The other is a common proverb—"Tout ce qui brille n'est pas or," to be explained and illustrated.

The moral I would draw is that Free Composition, if it does not necessarily lead to cramming, at any rate, lends itself to that abuse, and has tended to encourage it. If I were a crammer, sending in my class for French in the College of Preceptors Examination, I should set them to write seven essays, one on a subject (it does not much matter which) taken from each of the seven groups. The utterly bad essays would be torn up, the pupil having first been told why they were bad and shown a more excellent way. When a certain level had been attained and the blunders had been corrected, I should proceed, like the old-fashioned drawing-masters, to touch the essays up, add a few bold strokes, a neat turn or idiomatic phrase, and perhaps a purple patch, not too conspicuous—say, an apt quotation. And, lastly, I should make sure that each pupil knew his own essays by heart. If none of the seven ready-made essays (on second thoughts, I should make them ten, to include an historical character, which would serve also for your favourite hero, a journey, and a letter to a French friend), if none, I say, of these, with a little impromptu tailoring, failed to fit, it would be against all the odds, and I would defy the acutest and most conscientious of examiners to detect the imposture, or, if he suspected it, to bring the culprit or culprits to book. Do you join issue? Let me relate what a friend of mine, an experienced examiner, told me the other day. He had been looking over a "Caesar" paper and was complaining how little that class of boys profited by their Latin. "The best of the bunch," he said, "had evidently learned the crib by heart, and in one of the passages I set translated a sentence that I had omitted in the Latin." "Of course, you gave him nought for it?" "No," he answered; "if I had so punished all who showed that they had been merely reproducing the crib, I should have plucked three-fourths."

Before I pass on, I would call attention to another difficulty suggested by this collection of examination papers. The Free Composition is in each case set as an alternative to the translation into French of a passage of English. I must crave your indulgence for recording one of these alternatives:

Either (a) Write in French a letter of twelve to fifteen lines to a French friend, saying why you are proud of your native town or country.

Or (b) Translate freely into French:—"An elder sister had been cajoled into doing a small boy's French translation. When he came back from school he was very morose. 'Well,' said she, cheerfully, 'what did they say to the French?' 'Asked me if I'd done it myself,' the small boy grunted. 'I said, "No";' and he glared at his sister. 'Well, and what then?' said she, rather alarmed. 'Then I got whacked twice; once for getting someone else to do the translation, and once for getting someone who translated so badly.' On reflection the sister thinks that the master scored heavily. So does the small boy. And she has not yet succeeded in inducing him to make it up with her."

I can only thank my stars that I was not the examiner who was set the impossible task of comparing the work of the free compositionist and the translator, and of estimating in marks their respective merits. Supposing the first to have written fifteen lines of faultily faultless platitudes to the tune of "Rule Britannia," and the other to have shown knowledge of French accidence and syntax, but to have left blanks, or boggled hopelessly over the highly idiomatic or almost slang

phrases "cajoled into," "grunted," "glared at," "whacked," "scored heavily," "make it up"—what, I wonder, would be their respective marks? The two performances are not *in pari materia*, and it would be easier to adjudge *le grand prix* with the Derby and the Grand National Steeplechase as alternatives.

It is a rare privilege to be admitted to an examiner's workshop, to be allowed to test his weights and measures, and to check his calculations, and those who have, so to speak, the *entrée*, co-examiners and supervisors, may not reveal the secrets of the inquisition. We must all be grateful to the editor of *Modern Language Teaching* for giving us a glimpse behind the scenes and to the two teachers who frankly and fully expounded both their methods and their practice. Two Free Compositions on alternative subjects set in the same examination—"Les produits agricoles de l'Angleterre" and "Richard Cœur de Lion"—were published, and members were invited to assign marks and explain their procedure. I am not going to assume the umpire or critic, and only refer to this test case to show what different results two competent examiners may reveal.

The first composition on agriculture gets respectively 50 per cent. of full marks and 30, or, if strictly marked, 16½. The second, on Richard, 70 per cent. and 37. This instance brings out another drawback on which I have sufficiently dwelt. As one of the examiners remarks, the pupil who has just been "doing" Richard in his English history (still more if he has had the luck to have done him in his French Reader) has an unfair pull. The same with the pupil who has been trained on Dent's pictures of country life.

One other difference which goes to the root of the matter. One examiner assigns half the marks to *le fond* (as he calls it), *i.e.*, method and style. The other apparently allows it only a small percentage added or subtracted for general impression. If such diversities of marking are revealed in two show specimens prepared for public exhibition, one can only wonder what happens when the examiner has to look over and mark against time scripts by the hundred at the rate of one a minute.

A more excellent way of testing Free Composition is that adopted by the Scotch Education Department for their leaving certificate. An anecdote or brief narration in English is read out twice to the candidates and they are asked to reproduce the substance of it in French. The defect of this plan is that pupils are able to memorize the short story and produce, not a free paraphrase, but almost a word for word translation. In the Oxford and Cambridge Locals I have observed what seems to me an improvement in this plan—jottings or headings of a narrative, in the jingle style, to be expanded by the candidate.

The regular *thème* or essay, a separate paper of two or three hours, a recognized institution in France, is non-existent in English schools, and I need only notice it as a counsel of perfection. The nearest approach that I know to it is in the Joint Board Higher Certificate paper for French composition. Here some general subject, such as "French and English Manners," is set as an alternative to a question on the French prepared book, "A Comparison of 'Le Misanthrope' and 'Timon of Athens,'" but only an hour is allowed.

I have stuck closely to my brief, and I fear wearied you by a meticulous survey of my humble patch of allotment. I can only claim to have laid a strong indictment against Free Composition as tested by examination, and shown that it exercises, or may exercise, a malign influence both on teachers and taught. But I go farther and maintain (with some trepidation, as an old fogey addressing a younger generation of experts) that it cannot and should not supersede or take the place of translation proper. It will not teach a boy the exact meaning of words and phrases, the fine shades of difference between synonyms, the distinctions between French and English homonyms—*honnête* and "honest," *respectable* and "respectable," *dévot* and "devout," and so forth—nor the language of poetry, the connotations and suggestions on which so much of its beauty and inner meaning depends. And what would La Fontaine and Racine, what would Victor

Hugo and De Musset be without this power of appreciation?

But this is too large a subject to embark on at the fag end of a paper. *Tout est dans tout*, and I am not going like Jacotot to treat you to a treatise on "Calypso." All I would maintain, as I have maintained elsewhere, is that the main object in learning French is to be able to read and understand French, to appreciate its great literature, and, incidentally, to imbibe something of the French genius, logical development of thought, and perfect precision of language.

We have long ceased to hold that the educational value of a subject is commensurate with its difficulty, and have left to the Classicists their vaunt of mental gymnastics, but we are not prepared to allow that modern languages is a soft option. Our contention is that French and German are as well worth knowing as Latin and Greek. To this all present will subscribe, unless some classical head master has strayed in by mistake. The rider I would add is that a real knowledge of French or German—to know them in the same way as Jebb knew Greek or Munro Latin—cannot be obtained solely by conversation and free composition. These are pedagogues (in the Greek sense of the word) to lead us to the high school of literature, nursing mothers to teach us the elements of the foreign tongue, to accustom us, as it were, to breathe freely in a strange atmosphere. Later on a boy's nose must be held to the grindstone. I dislike the metaphor, for there need be no compulsion, and I use it only to signify that he must be led to see what is meant by "exact scholarship"; that approximation, paraphrase, *à peu près* will no longer satisfy; that he must aim at comprehending the full significance of every phrase, word, and particle in what he reads, and if he cannot render these from French into English or from English into French (the latter, I allow, is a feat that not even all members of the Modern Language Association could perform) at least of seeing that they are untranslatable, and so of appreciating, as is possible in no other way than by translation, the genius of French language and literature.

CORRESPONDENCE.

OXFORD RESEARCH DEGREES.

To the Editor of The Journal of Education.

SIR,—Will you permit me to correct a statement with which I am credited on page 115 of your last issue? Candidates for the Research Certificates in Letters and in Science at Oxford are *not* required to have taken the Honours course at Oxford or a degree at a British University, but candidates who have not taken such a degree, or the B.A. course at Oxford or Cambridge, must satisfy a University Committee that they have received a good general education. The University does not limit its Research degrees to graduates, and the corresponding certificates for women come under the same rule. You have omitted another important point in my letter. Women candidates must be registered women students belonging to a recognized society, just as men must be members of the University. Residence is not compulsory for the period of study, only for the degree. Yours faithfully,

ANNIE M. A. H. ROGERS,
Clarendon Building, Oxford. Hon. Secretary, Association for the
February 22, 1914. Education of Women in Oxford.

PROF. CULVERWELL'S "MONTESSORI PRINCIPLES AND PRACTICE."

To the Editor of The Journal of Education.

DEAR SIR,—I am sorry that Prof. Culverwell should have mistaken the application of one of my remarks in the review of his valuable work. The phrase, "nor should moral training consist of dry advice," does not imply that his chapter on "Character and Discipline" advocates the dry advice: it does not. The remark was made as a statement of opinion, not as a criticism. My reason for regarding the chapter, as a whole, as "inadequate and disappointing" was that, considering the excellence of the rest of the book, one might have expected such subjects as character and discipline, if they were touched at all, to be dealt with far more

fully; and the subject of character training especially to be regarded in a more systematic and synthetic manner.

YOUR REVIEWER.

MINISTERING CHILDREN'S LEAGUE.

To the Editor of The Journal of Education.

SIR,—May I be permitted to bring to the notice of the principals of girls' schools the merits of the Ministering League, a development of a worldwide Society which has accomplished very extensive charitable work? Its aim is to counteract the vice of selfishness by teaching the young people to consider the wants of others and most especially those of the poor and suffering. The Association has beautiful Homes of its own, but it differs from kindred societies inasmuch as it leaves its members free to work for any charity appealing to their sympathy. It is not a mere money-lending organization, for it seeks to form the characters of the young people for good, teaching them to regard it as a duty to be helpful to those about them, and to consider every day as wasted during which no acts of love and unselfishness have been performed. It has been called the "Practical Christianity Society," and a lady who lately addressed a meeting, and who had had long experience of the merits of this organization, spoke of it as having acted as an "inspiration" to the pupils confided to her care. She considers that, even in the case of those who used to appear but indifferent members, in several instances the lessons of unselfishness seemed to come home to individuals after the lapse of time, proving that the influence was by no means wasted. In a school in South Africa, where the League had been introduced, it had such good results that inquiries were made as to what had brought about the change of tone. Her Majesty the Queen is Patron of the organization, the Bishop of London is its President. The office is held in this house, where papers giving further information can be obtained. I remain, Sir, yours very faithfully,

M. S. MEATH,
83 Lancaster Gate, W. Foundress and Hon. Secretary.

SAFE NOVELS.

The Broken Halo. By FLORENCE C. BARCLAY. (6s. Putnam.)

The halo is a gilded plate inserted above the head of St. Peter in a church window, which Dr. Dick, the hero of the story, as a child of seven, smashes to bid defiance to the world in general and in particular his great-uncle, the Rector, who has unjustly thrashed him. A social rebel he remains to the end, determined to be top dog and quits with a world of snobs and hypocrites. The heroine, the Little White Lady, is a saintly widow who has suffered martyrdom at the hands of two husbands—the first a hard cynic, the second a ruffian who has already murdered one wife and would have made away with her had not his wife (it was a case of bigamy) shot him in the nick of time. Dr. Dick saves her life in a bad attack of the heart, and there gradually grows up between the two the relation of mother and son. He feels for her all the love and devotion that was buried in his own mother's grave, and she brings out all his better qualities, and tries, not by preaching but by her life and example, to restore his early faith. All this is charmingly told, but the romance is spoilt by the confession that he married her for the sake of her fortune, and the death-bed conversion of a heathen, portrayed all through as *naturaliter Christianus*, leaves us cold. It is a pity that what might have been an exquisite idyll is spoilt by melodrama.

The Flying Inn. By G. K. CHESTERTON. (6s. Methuen.)

This, as the paper cover instructs us, is a joke and something more—a challenge in ethics. That we may have a good joke in three hundred pages and more "Gulliver's Travels" sufficiently proves, but we confess that we grow somewhat weary of "The Old Ship" and its signboard which is spirited from place to place, and the Irish Captain, a Hercules, a Haroun al-Raschid, and a Larkin rolled into one. Swift's challenge is plain, and anyone who knows the history of the times needs no key to the satire, but it would puzzle a very Daniel to interpret Mr. Chesterton's parables, or to deduce from them any moral except that Whatever is is wrong. The drink question is the clue of the labyrinth, but the reader is left in doubt whether he is a teetotaler or a friend of publicans, and he would probably say that to ask such a question is an impertinence, and shows a lack of humour. We must accept it as a pure extravaganza. Those who read it, as we have done, at a spell are likely to be bored; but it is full of wit, and has provoked many a hearty laugh. The improvised songs are particularly happy, and it ends with a love lyric which is a gem.

JOTTINGS.

AT the last meeting of the Teachers' Registration Council, on February 20, applications were considered, and seven hundred names were placed on the Register, a small number being held over for further inquiry. Applications continue to come in at the rate of some twenty a day.

ON March 13, 17, and 20 next, at Crosby Hall, Chelsea, Miss Hoskyns-Abrahall will deliver a course of three lectures on "Biology in Relation to Education." Her two pamphlets, "Biology as a factor in the Teaching of Morals" and "Child Nature and Education," have already made her name familiar as an original thinker. In the present course she will give the results of further study and research in their practical application.

JOHN NAPIER'S "Logarithmorum Canonis Mirifici Descriptio" was published in 1614; and it is proposed to celebrate the tercentenary of this great event in the history of mathematics by a Congress, to be held in Edinburgh on Friday, July 24, 1914, and following days. The celebration is being held under the auspices of the Royal Society of Edinburgh, on whose invitation a General Committee has been formed, representing the Royal Society of London, the Royal Astronomical Society, the Royal Philosophical Society of Glasgow, the Universities of St. Andrews, Glasgow, Aberdeen, and Edinburgh, and many other learned bodies and institutions. Through the favour of the Editor of *The Journal of Education*, the President and Council of the Royal Society of Edinburgh have now the honour of giving a general invitation to mathematicians and others interested in this coming celebration. All desiring to take part in the celebration are requested to communicate with the General Secretary, 22 George Street, Edinburgh.

IN the *Atlantic Monthly* Mr. Fielding-Hill has been expounding current English politics to Americans, and we are concerned with them only as they touch on education. "That the education machine does more harm than good has been evident to all classes for long, and the tyranny has become insufferable." The following sentence will suffice to take the measure of our critic: "We are a cheerful people who like a glass of beer, and we like it in the comfortable and reasonable conditions not now possible." He borrows Archbishop Magee's famous dictum, and would doubtless add, "I would rather see England ignorant and brutish than taught and trained under compulsion."

SIR HENRY LUCY, in his reminiscences that are appearing in the *Cornhill*, relates how he was twice expelled from a Sunday school. Of the second expulsion his memories are hazy, but he thinks it must have been due to the inveterate pugnaciousness which he shared with Dr. John Brown's Rab. The cause of the first expulsion was for long a mystery to him. He had been a model scholar generally at the top of his class, when one Sunday he was told by the Superintendent to wait after school, and informed that he need not again present himself. Years after he met the Churchwarden at dinner, and asked for an explanation. His old teacher frankly confessed that the simple reason was that Lucy was always asking questions that he could not answer impromptu, and he was afraid of losing his dignity.

LESSON ON POLAR EXPEDITIONS.—*Teacher*: "And what sort of animals would you expect to find in the Arctic Circle?" *First Child*: "Polecats." *Second Child*: "Archangels."

THE Class Lists of the Cambridge Local Examinations held in December last show that the total number of candidates entered was 9,590, exclusive of 5,210 candidates who were examined at Colonial Centres. In the Senior Examination 886 boys and 992 girls satisfied the Examiners, 70 boys and 19 girls being placed in the First Class; 508 boys and 212 girls showed sufficient merit to entitle them to exemption from one or both parts of the Previous Examination. Of the Junior candidates 1,700 boys and 1,163 girls passed, the numbers of those placed in the First Class being 101 and 17 respectively. In the Preliminary Examination 1,156 boys and 784 girls passed.

IT is not every candidate for an assistant mastership in a public school who can add to scholastic qualifications not only a year's experience as Priest-Vicar of a Cathedral, but also a period of service as a trooper in the Imperial Yeomanry during the Boer War, such service being recognized by the Queen's Medal with four clasps. This, however, is the record of the Rev. J. G. Bussell, M.A., who has recently joined the staff of Marlborough College.

THE important post of Director of Education to the City of Manchester, vacant by the death of Mr. C. H. Wyatt, has been filled by the appointment of Mr. Spurley Hey, Secretary to the Education Committee of Newcastle-upon-Tyne. Mr. Hey is forty-one years of age, and has had a wide experience of education in all its branches since he began as a pupil-teacher. There were nearly a hundred candidates, reduced first to eight, and then to four—Mr. Benchara Branford, Mr. O. Duthie, Mr. E. M. Rich, and Mr. Hey.

WHEN Matthew Arnold went on a lecturing tour in America, the comment on his first lecture, entitled "Numbers," in the *New York Herald*, was: "He lisped in Numbers, but the numbers came not." Mme Montessori, who lectured in Italian, has had a similar experience. It is reported that two enthusiastic parents had tramped for miles through the snow to learn the new gospel. Their zeal was damped when they heard the prophetess speaking in an unknown tongue, but revived when the showman who accompanied her proceeded to interpret. At the end of her first period he announced: "The lady says, 'Put the baby in the crib.'" Their hopes fell, and when at the next pause he added: "She says, 'Give the child my blocks to play with,'" they went away very sorrowful.

FROM a child's essay on Cats: "Don't teeze cats, for firstly, it is wrong so to do; and 2nd, cats have clawses which is longer than people think. Cats have 9 liveses, but which is seldom required in this country because of christianity. Arnt you glad that you belong to this country?"

THE International Guild, temporarily housed at Dr. Williams's Library for over a year, has so far justified the experiment of founding a London Branch that a permanent home has been opened at 3 Brunswick Square, W.C. The domestic arrangements allow for the reception of some dozen or more resident women students, English and foreign. The London Branch is under the direction of Miss E. S. Williams, B.A., niece of the Foundress and President of the International Guild.

SIR OLIVER LODGE was peculiarly happy in the reminiscent remarks with which he prefaced the lecture on "The Ether of Space" at Bedford College. He held one of his earliest Chairs of Physics at the College, and peals of laughter resounded from a packed students' gallery when they heard how closely guarded was the lecturer from entrance till he reached the platform at a time when the chaperon with her knitting was a conspicuous feature of the lecture room.

OUR attention has been called to a county court case in which a head master sued a parent for a term's fees in lieu of due notice of removal. The plaintiff was required to show not only that this condition exists, but that it had been brought to the notice of the parent. In this case it was proved that the defendant had applied to Messrs. Paton for a prospectus of the school, in which the condition was clearly set forth, and that one had been sent him. The judge ruled that this was sufficient evidence.

AT a meeting of the Council on February 23, Mr. James Shelley, B.A., was appointed Professor of Education at the University College, Southampton, in succession to Prof. Maxwell resigned.

THE thirty-sixth Annual Report of the Association of University Women Teachers records a year of steady work and progress. There has been an increasing demand for specialists with an Honours degree and, in particular, for qualified teachers of geography. Among the deaths, this year happily few, is that of Mrs. R. H. Taylor (*née* Margaret Shaxby), for two years Assistant Secretary, who since her marriage had given much active help in the Office of the Association. Miss Shaxby was a frequent contributor to these columns.

REVIEWS AND MINOR NOTICES.

The Cambridge History of English Literature. Edited by A. W. WARD and A. R. WALLER. Vol. IX: *From Steele and Addison to Pope and Swift.* Vol. X: *The Age of Johnson.* (Each 9s. net. Cambridge University Press.)

The period covered by Vol. IX is anything but a barren plain, but it may fairly be described as a tableland with no Pisgah heights. The four names that serve as a title have been well chosen to mark both the limits and the chief eminences. Steele and Addison have been entrusted to Mr. Harold Routh, a young lecturer in the Goldsmiths' College, who has written a sober, well informed essay, more exact than either Macaulay's Edinburgh review or Thackeray's lectures, though it does not pretend to the epigrammatic wit of the one nor to the genial humour of the other. The influence of the coffee-house is well brought out, but the picture would have been more effective had it been contrasted with its descendant, the modern club—had we been told the usual hours of meeting, the unwritten laws that governed it, the potations consumed, by no means confined to coffee. The falsity of Matthew Arnold's remark that Puritanism turned the key on intellectual progress in England for two centuries is well exposed. The literature of the coffee-house carried on the Puritan tradition of plain living and high thinking, and was a protest against the aristocratic exclusiveness and licence of the Cavaliers. We cannot agree with the definition of the short story, "a tale which suggests fundamental ideas or convictions," nor trace its genesis to the *Spectator*. The direct descendants of the *Spectator* were the monthly magazines, of which *Household Words* and *Chambers's Magazine* are the type, now read by millions who never look at a book, and the "middles" of the weekly and daily press. We should like to know what was the circulation of the *Spectator* and the *Tatler*; that of its successor, the *Rambler*, was 500.

The following chapter on Pope by Mr. Edward Beasley is disappointing. Of Pope, indeed, it is hard to say anything new, and most will agree with the final pronouncement—premier among poets of the second class. Pope's merits as a metricist seem to us greatly exaggerated. He is censured for imperfect rimes, but these are rare, and the fault is venial. On the other hand, he is praised almost unreservedly for the perfection and variety of his rhythm, but to our ear the cadence of his heroic couplets seems no improvement on Dryden, and on a par with the blank verse of Shakespeare's precursors. It is tantalizing for readers who cannot consult Courthope's standard edition to be told that many of his best lines are afterthoughts and corrections without supplying the first draft.

Swift towers a head and shoulders above his contemporaries in the first half of the century, and Mr. G. A. Aitken has done full justice to his subject. As he justly observes, Swift's writings cannot be appreciated apart from his *milieu*, and the first half of the essay is devoted to his life. His relations to Stella and Vanessa are delicately touched upon, and his marriage, undoubtedly a marriage only in name, is left an open question, of interest only to the antiquary. The conclusion is just and temperate. For sheer powers of mind Swift had no equal among his contemporaries. Of all he wrote, at least in prose, *mens agit mollem*; but it cannot be said of any that *spiritus intus alit*; the higher gift of spirituality is wholly lacking.

The chapter on Minor Poets is divided between two writers, and it will strike the reader as odd to find Prof. Saintsbury, who contributes the second half, quoted as an authority by Mr. Seccombe, who is responsible for the first half. To some, too, the reflection will occur that, if contemporary minor poets were treated on the same scale as Prior and his congeners are here, the British Museum would have to enlarge its borders.

We must hasten on to the chapter that more immediately concerns us, and can only glance at what intervenes. Dr. Ward criticizes Burnet as the historian and Bolingbroke as the political writer of the period. To the style of the latter, who has served as the model of later publicists and leader writers, he does bare justice. For writers of burlesques and translations, Mr. Charles Whibley was a happy choice, as was Prof. Sorley for Berkeley, the Deists, and Bishop Butler. Miss Spurgeon gives us a sympathetic study of Boehme and his English exponent, William Law. That Newton owed the germ of his three laws of motion to a study of Boehme will be news to many. Sir Richard Jebb's monograph on Bentley leaves little to be gleaned, but Mr. J. B. Duff has gathered up the fragments.

Prof. J. W. Adamson is better known as a writer on the method and practice than on the history of education; but the concluding chapter reveals not only what we knew before, his power of clear exposition, but also his wide research. We can best show the interest of the article by noting some of the curious anticipations that he has either discovered or brought into prominence. In Harrington's "Oceana" there is a plea for universal, free, and State-controlled education from the age of nine to fifteen. Petty, in his plea for *ergastula liberalia*, in which children should study "all sensible objects" before the three R's, and learn drawing and physical exercises, anticipates Pestalozzi and Froebel. Cowley advocated undenominational schools and the establishment of scholarships for poor men's sons to the secondary schools and the Universities. Defoe, far in advance of Lady Mary Wortley Montagu and the feminists of the day, would deny to women no sort of learning, and let them share all the studies of their brothers.

In Volume X the title-chapter, "Johnson and Boswell," first attracts our notice. Mr. D. Nichol Smith has strictly followed the Editor's prescript, "No flowers, by request," and we have a complete biographical account of Johnson's works and a critical estimate of their respective merits, with no purple patches. To his defects he is perhaps a little blind, excusing his purblind criticism of poetry and extolling "Rasselas" as a lesson on the vanity of human wishes, "never stated with more sympathetic knowledge, and enlivened with a greater wealth of aphoristic wisdom." We must still confess that the novel is to us unreadable. Full justice is done to Boswell, and we hardly think that his Works, apart from the Life, warrant five pages.

We turn, by way of contrast, to Prof. C. E. Vaughan's chapter on Sterne. Mr. Vaughan is a true Shandyan, and he knows how to make his readers share his own delight in the immortal "Life and Opinions." His protest against Thackeray, who sees in all that Sterne wrote a reflexion of the author's unedifying life and conduct, may be justified, but it savours a little of special pleading, and, as we read of "poor Marie," we cannot forget the philandering parson.

In Goldsmith Mr. Austin Dobson had a congenial subject, and his essay reflects the ease and grace of his author. "He contrived, even in his short life, to leave behind him some of the most finished didactic poetry in the language, some unsurpassed familiar verse, a series of essays ranking only below Lamb's, a unique and original novel, and a comedy which, besides being readable, is still acted to delighted audiences." We question the "didactic poetry," but otherwise there could not be a more perfect summary.

Fielding and Smollett are treated by Mr. Harold Child as "Parallel Lives." "Smollett's novels have more about them of the quarry and less of the statue." "The Pickwick Papers" derive directly from "Roderick Random," and it might be added that the influence of "Tom Jones" can be no less clearly traced in "Vanity Fair." Richardson has been wisely entrusted to Monsieur Cazamian, of the Sorbonne, for the influence of Richardson was greater and more lasting in France and Germany than in England.

Under Poetry the posthumous essay of Mr. Duncan C. Tovey on Gray is the most noticeable contribution. It sums up the results of a study to which a ripe scholar had devoted the best part of a lifetime, and the minute verbal criticisms

that are interspersed do not obscure the bold outline of the picture presented.

We could have wished that Collins, the natural pendant to Gray, had been treated in the same chapter, and not coupled with Young and the lesser poets. Not that Prof. Saintsbury fails to do justice to Collins. To him, as to Swinburne, Collins is pure gold, and the dross that we confessedly find in his poems belongs not to Collins, but to the age in which he wrote.

But, under "Belles Lettres," the chapter which impresses us most by its originality is Prof. Ker's, on "The Literary Influence of the Middle Ages." Through Dryden, Temple, Bishop Percy, Gray, the underground stream is traced till it burst forth in Ossian. The Macpherson controversy is put in a nutshell: "He had begun with a piece of literary artifice, a practical joke; he ended with deliberate forgery."

We have already exceeded our limit, and hope that the next volume may soon give us an opportunity to notice the historians, philosophers, and divines who occupy the concluding chapters; but we must pay a passing tribute to the masterly critique of Gibbon by the chief editor.

The bibliographies occupy exactly a fourth, or, allowing for the different size of type, more nearly a third, of the two volumes. To the work as a whole it has been objected that, however excellent the parts are, it is rather a collection of essays than an organic history of English literature; but this part is a *κρίμα ἐς ἀεί*. Other storeys will be added, but there need be no rebuilding.

England in the Later Middle Ages. By KENNETH H. VICKERS. With four Maps. (10s. 6d. net. Methuen.)

This volume completes the History of England in seven volumes, published by Messrs. Methuen under the general editorship of Prof. Oman. Editor and publishers deserve the congratulations and thanks of all students of English history. The series contains, in Mr. Davis's "England under the Normans and Angevins," a book which is in its way a classic among textbooks; and, in Mr. Trevelyan's volume on the Stuarts, a work of much literary value. The first part of Prof. Oman's opening volume and Mr. Grant Robertson's "England under the Hanoverians" are useful contributions to historical scholarship. Prof. Vickers has been entrusted with the long period between the accession of Edward I and the accession of Henry VII. He has an extensive knowledge of the original authorities, and has also acquired a large stock of interesting out-of-the-way material. He has covered the whole ground diligently, and has throughout been at extraordinary pains to write a full-balanced narrative. His notes and bibliography of contemporary sources will be useful to students; yet we cannot say that he has written a very good book. His use of authorities, if imposing, is often perfunctory, and his treatment undigested. His style is uncertain, at times terse and vigorous, at times hurried, confused, and almost unintelligible (e.g., in the account of Sluys and the campaign of Tournai, pp. 166 *seq.*). It is a pity that Mr. Vickers did not reconsider and recast his work, was not more ambitious in regard to arrangement and less in regard to matter, and was not sometimes satisfied to refer his readers to the authorities quoted.

Cyclopedia of Education. Edited by PAUL MONROE.

Vol. V: *Pol-Zwi.* (21s. net. Macmillan.)

We heartily congratulate Prof. Monroe on the completion of this monumental work, which dwarfs and throws into the shade all its British competitors. America naturally takes the lion's share, but the editor has enlisted on his staff some of the most distinguished English authorities, and we note among them valued contributors to the *Journal*—G. G. Coulton, J. J. Findlay, A. F. Leach, J. E. G. de Montmorency, and Foster Watson. Equally well known in England as in the United States are the editor himself, John Dewey, F. M. McMurry. Among the noticeable articles in this volume are those of Miss E. K. Adams on "The Higher Education of Women," a complete treatise; "Psychology," by G. M.

Whipple; with the subsidiary articles on "Physiological Research" and "Laboratory." Prof. Findlay treats of English Public Schools, and Mr. H. W. Ord, late Secretary of the Teachers' Guild, of the New Register. We note a slight slip at the end of the article. The ten committees are not of the whole profession, but of the Technological Section.

Ambidexterity and Mental Culture. By H. MACNAUGHTON-JONES. (Heinemann.)

Dr. Macnaughton-Jones in his practice as a surgeon found himself handicapped by his right-handedness, and by a strong effort taught himself to use the left hand in operation with equal facility, and he here pleads that all should be trained to be ambidextrous in their earliest years, when little effort is needed. Why the race is predominantly right-handed is still an unsolved problem. The explanation first, we believe, suggested by Bichat, that it is due to the position of the foetus *in utero*, still holds the field. Doubtless, convention and education have strengthened the original tendency, but these are only a subsidiary influence, and the most practical lesson we glean from the volume is the grave warning against the danger of employing violent means to cure left-handedness. The relation of the brain to the nervous system and the organs of sense is clearly expounded, and interesting cases are quoted, some from the author's own practice. On the other hand, there is much irrelevant matter. Thus we have a cloud of witnesses to the value of early manual training, among them Sir Charles Bell, who held that man is highest amongst animals because he possesses a *right* hand. There is a whole chapter on the Montessori Method to prove to the Dottoressa that ambidexterity is the one thing lacking in her system. Nor is the author strong in classical lore. "Boustrophedon," "Pythagorus," "rythm" (*passim*) are peculiar spellings, and we should like to know where "in the ancient classics the Scythians were described as a marvellously long-lived race." One delightful story of "unilateral psychopathic obsession" deserves to be quoted. "In the Cork Lunatic Asylum there was a woman whose delusion took the form that her left leg was Protestant and her right leg Catholic. So she insisted on keeping the former outside the bedclothes to punish it for its apostasy."

A Manual of Psychology. By G. F. STOUT. Third Edition. (8s. 6d. Clive.)

To begin with, this third edition has 736 pages as compared with the 616 of the first edition. But it is not a matter of mere increase in bulk. The book has been practically rewritten. Now to those of us who are familiar with the old edition, and have been in the habit of using it regularly, there did not seem any special reason for revision. It was probably the best textbook on the subject when it appeared, and even to-day one cannot feel that it was out of date. Yet when we compare this new edition with its predecessors we find cause for great satisfaction. Prof. Stout has no need to withdraw from his former positions, and as a matter of fact he does not; but he has felt that in a textbook it is necessary to give such a presentation as will meet with the needs of the student for a presentation of the prevalent points of view, and so has given "prominence to the arguments of recent writers who champion the theory of Interaction as against Parallelism." He is now prepared to admit that he is here dealing with an open question, though he sturdily adheres to his own personal preference for Parallelism. What one admires about the new edition is that there has been no change made for the mere sake of change. It was necessary, no doubt, in the subjects of Attention and Instinct to bring the text up to date, since so much has been recently done in connexion with these subjects, work in which Prof. Stout has himself had a chief share. Good as we all thought the old editions to be, we are driven to confess that this is better. We are confident that this edition will maintain the position of its predecessors as one of the best textbooks on the subject in the English language.

The Political Philosophy of Burke. By JOHN MACCUNN, Emeritus Professor of Philosophy in the University of Liverpool. (5s. net. Edward Arnold.)

Prof. MacCunn has given us, in this not very capacious volume, a very clear and very complete account of Burke's political opinions. It is perhaps more correct, in a sense, to say "opinions" rather than "philosophy," because speculation as such was anathema to the great orator. Nevertheless, just as it has rightly been said that no man can deny the existence of a science of metaphysics without committing himself to a metaphysical theory, even so Burke, in denying the legitimacy of abstract speculation as a rightful method of approaching political problems, was himself formulating a speculative theory. The outcome of it, as Prof. MacCunn points out, is that Burke was the first to abandon the

contract theory of his predecessors, and enunciate that view of society as an organism which was characteristic of the century which followed him. If there is a fault in the present work, it comes not so much from any mistake on the author's part as from the nature of his subject-matter. We seem to encounter the same ideas over and over again in different disguises, and the reason is not far to seek, for Burke was a man whose ideas, if prolific, were simple and few in number. That civil constitutions are natural growths, and cannot be suddenly destroyed or radically altered without doing violence to nature, is one of them; and the other is that the basis of the State is religious, and civil obligation is rooted in religious obligation. It is true enough, no doubt, that a nation is a creature of habit no less than a human being, and we cannot change our habits at all times of day without great loss to our power of work and clearness of purpose. But what Burke did not see is that, just as a great crisis often causes revolution in the ways of some one man, accompanied by a complete conversion of heart and mind, and by a no less complete change of habit and choice, the same upheaval may at times be just as necessary and just as healthful in the life of a people. The drawback is that such a revolution is in either case accompanied by symptoms of fanaticism, and this is unpleasant. If we take off our clothes in the public street, the world at large will be shocked. Moreover, Burke could never see how the seeds of true citizenship might lie in quite humble ground. He thought, truly, "that ordinary men are creatures in whom feeling, habit, and even prejudice, are apt to be stronger than reason"; "that they are quicker to feel grievances than to find remedies"; but this is rather an argument why ordinary men should not sit in deliberative assemblies than why they should not act as electors to the same.

The comparison between the one disability and the other is still too often made—for instance, in the arguments about Women's Suffrage, and probably we suffer more from the defect of our representatives being too "ordinary persons" than because those who send them to the House of Commons exhibit the same quality. The choice is too limited. Prof. MacCunn puts this well: "If an artisan or a peasant have principle enough to be a good father, a true friend, a helpful neighbour, a capable workman, and law-abiding subject, the presumption is in favour of his becoming likewise a reasonably good citizen, if opportunity to prove his quality be given him." It is too often forgotten that the capacity for and test of good citizenship is as much, if not more, moral than intellectual. On the religious point, subsequent philosophy has confirmed Burke's opinion that the State has a religious sanction. If the upholders of Divine Right had ascribed it to the State rather than to the person of any particular ruler or line of rulers, the Whigs would have had no quarrel with them. But here again, in his view of religion in its relation to the State, Burke failed through refusal to push a theory to its logical conclusions. Dogmatic to a certain point, he then becomes weakly inductive, even to the point of opportunism. For to say, as he does, that "Dissent not satisfied with toleration is not conscience, but ambition" is to support a prejudice by a sophism rather than to place religious toleration on a philosophical basis.

Out of the Dark. By HELEN KELLER.

(5s. Hodder & Stoughton.)

This is a collection of addresses and articles of Miss Keller, which have appeared in various magazines at different dates. That there is a good deal of repetition is therefore not surprising, and we should have preferred it if Miss Keller had written a fresh book from the old material. As it is, the volume may possibly not receive the notice it deserves. All Miss Keller says of the prevention of blindness, of our duties to the blind, of what the blind can do, and of what should be the training of a blind child, is worthy of close attention. She pleads very rightly that the blind from earliest infancy should be treated as far as possible as normal persons, and should not be relegated to corners, to lead a sedentary and idle existence. She says of the blind child, "after all, the whole difference between the training of a blind child and one who sees lies in a little extra effort," and she goes on to show how much the blind child may participate in ordinary home life, if only parents will make this extra effort. Further she writes, "the heaviest burden of the blind is not blindness, but idleness, and they can be relieved of this greater burden," and "it is not blindness, but the afflictions that accompany it and result from it, that make the blind miserable and inefficient." Many philanthropic people have tried to amuse the blind, but, in America at least, it is only just beginning to be realized that the truest charity is to make them self-supporting and self-respecting members of the community. "What the blind workman needs is an industry that will enable him to produce something that people will buy, not out of pity for him, but because it is useful or beautiful." That consideration of the blind and the deaf should lead Miss Keller on to the study of wider social problems is natural. Mrs. Humphry Ward and her followers

might read with profit her views on the suffrage. But the article "How I Became a Socialist" is merely a chronicle of reading pursued, and a protest against over-hasty newspaper pronouncements. We cannot think this at all worth publishing in permanent form, and incidentally we may remind Miss Keller that abuse is no argument. One or two other articles are of purely topical interest, and this padding detracts from the genuine value of the book.

Essays and Studies. By Members of the English Association. Vol. IV: Collected by C. H. HERFORD. (5s. net. Clarendon Press.)

The volume for 1913 fully maintains the high standard of scholarship and literary ability set by Mr. A. C. Bradley in 1910. The drama is the principal subject treated. The first study, modestly entitled "A Note on Dramatic Criticism," is an exhaustive review of the various theories of critics, from Aristotle to Sarcy, on the relation of the playwright to the stage. There is, it appears, in one of the largest American Universities a "Dramatic Museum" filled with theatrical *bric-à-brac*, but without any collection of plays. This furnishes Mr. Springarm with a text for admonishing the playwright: "Don't think about your audience; that is the best way of serving it in the drama." "The play's the thing," and Mr. A. R. Skemp contributes a highly appreciative review of Mr. Galsworthy's plays, and Mr. G. P. Baker a defence of Marlowe's dramatic technique. Of the remaining articles the most noticeable are "Platonism in Shelley," by Mr. L. Winstanley, showing how Shelley combined, and in part reconciled, the apparently conflicting strains of French revolutionarism and Platonic idealism; and "English Prose Numbers," by Prof. Elton, a study of English prose rhythm on the same lines as Prof. Saintsbury, but with a different notation and different results.

The Pageant of British History. By E. M. WILMOT-BUXTON (1s. 6d. Methuen.)

Miss Wilmot-Buxton has conceived the idea of telling the story of Great Britain in a series of pictures, and the plan is a good one, for it displaces the unnatural method of subdividing into "kings." Though this book, which can be used as a textbook or reader for children of eleven to twelve years of age, is an improvement on the usual history manual, yet there are signs that the author is not quite freed from the conventional trammels of history teaching. e.g. half a page is given to the whole subject of the Crusades, and a whole one to the Battle of Crécy; and there is no mention of the mightiness of India's religion and literature. The style is dramatic and the pictures are chosen well.

Proceedings of the Fifth International Congress of Mathematicians. In 2 vols. (30s. Cambridge University Press.)

Any general discussion of the material in these two volumes is here impossible, but the attention of teachers of mathematics should be drawn to the exceedingly important communications embodied in Section IVB of these "Proceedings." The first paper, by Prof. Hill, on "The Teaching of the Theory of Proportion," contains a simplified, but rigorous, treatment of the material in Euclid V, and affords a sound introduction to the study of irrational numbers. The fourth paper, by Prof. Nunn, on "The Calculus as a subject of School Instruction," is comparatively short, but full of inspiration. The report upon the mathematical training of the physicist is of considerable value, not only in itself, but because so many great mathematicians join in the following discussion. The concluding pages, however, will be of most general interest. These pages contain a report upon intuition and experiment in mathematical teaching in secondary schools. This report is the result of investigations carried out in Europe and America, and should form a valuable basis for further discussion.

The Age of Machinery. By ALEXANDER HORNE. (1s. 6d. Blackie.)

Mr. Horne has adopted the best method in dealing with his subject, and has produced a book that is no dry-treatise, but full of living interest for the boy who likes machines. The origin and uses of many machines, from the early implements of the Stone Age to the electric trams and aeroplane, are described without too much detail. The human interest is retained by treating the subject historically and by the occasional introduction of an anecdote. As a technical reading book in schools or as a gift book it is excellent.

A First Course in Projective Geometry. By E. H. SMART, M.A. (7s. 6d. Macmillan.)

This work is intended for the use of students who have read the substance of Euclid I, xi, and who desire some introduction to the properties of the conic before proceeding to the study of the more advanced works on modern pure geometry. While all teachers agree that the projective methods afford the most natural and the most powerful means of attacking geometrical conics, yet practically

every writer on projective geometry has assumed higher attainments on the part of his readers than those possessed by the average undergraduate, with the result that the methods of projection have been regarded by most students as auxiliary rather than principal. The present volume may be regarded as an argument for using the methods of projection from the beginning. It is essentially elementary in character, and no use is made of imaginary elements or of involution, the foci of a conic being defined by means of orthogonal conjugate lines. At the same time, a considerable amount of ground is covered, and the theorems demonstrated include all those conventionally regarded as belonging to elementary geometrical conics. The presentation is very clear, and, although this work is in quite a different class from the average examination textbook, it forms a most efficient guide to students preparing for such examinations as the Final Pass examinations of London University.

The Principles of Projective Geometry applied to the Straight Line and Conic. By J. L. S. HATTON, M.A. (10s. 6d. net. Cambridge University Press.)

This book is written for advanced students in mathematics who, having mastered the usually read books of Euclid, wish to proceed to an Honours degree. The work will, however, prove equally valuable to the less ambitious student, for it treats of a subject—projective geometry—which has hitherto been dealt with satisfactorily only in formidable and, except to the trained mathematician, unattractive treatises. The chief properties of the line, circle, and conic are deduced from a number of fundamental theorems of projection, and the book ought to do much to stimulate interest in pure geometry, which is too often neglected in favour of analytical methods. The publishers have done their work admirably, and the book is well and clearly printed—a feature of considerable value where intricate diagrams and symbols are constantly employed. Owing to the large size of the pages the diagrams and their associated letterpress are almost always to be found in the same opening, so that the annoyance of having to turn back is avoided. The book may be warmly recommended to all mathematical students who intend to proceed beyond the London University Intermediate standard.

Higher Algebra. By W. P. MILNE, M.A., D.Sc. (7s. 6d. net. Arnold.)

This textbook marks a distinct advance in the teaching of higher algebra. It is something more than a mere collection of isolated chapters, and it is thoroughly honest. No attempt is made to gloss over difficulties in order to give the reader a false sense of progress. Perhaps the most distinctive section of the book is the second chapter, which contains a very careful discussion of irrational numbers, and the student who makes a detailed study of these pages will acquire ideas of the utmost value in the further study of mathematics. At the end of each chapter there is a large collection of modern examples, drawn chiefly from recent Cambridge examination papers, and at the end of the book there is an excellent set of four hundred miscellaneous examples. In a second edition it might be advisable to spend more time over the presentation of Vandermonde's Theorem. Cayley's proof, as given on page 183 (and in all the textbooks with which one is acquainted), though comprehensible to an Honoursman, is too condensed for the ordinary student, and as the result of experience one finds it necessary to introduce the theorem by subsidiary propositions. We have encountered only one misprint (page 373), and the diagrams are well done. Altogether a good sound piece of work.

British Painters: their Story and their Art. By EDGUMBE STALEY. With 24 Plates in Colour. (5s. net. Jack.)

We may say without offence to the author that the art is better than the story, the illustrations than the text. The coloured plates printed on detachable cards, and ranging from Constable's "Cornfield" to John Sargent's "Children with Chinese Lanterns," are well reproduced and give a fair notion of eighteen eminent artists; but the text is discursive and does not distinguish indigenous from foreign and imported art, or establish the thesis propounded in the Preface, that "the British are supreme as a tasteful and artistic people." Mr. Staley's views of history are peculiar. Mary bore a "stainless character," though "her story is pictured in tones of grey, and red, and black." Elizabeth was a "fatuous figurehead," in whose reign art flourished, though she can take no credit for it. The style, too, is somewhat pretentious and sometimes incorrect. "His work, in every media, appears to be thistledown-dusted with prismatic colours. . . . The gossamer veil of Whistler was assumed by John Singer Sargent. . . . The unnatural aversion to painting in churches, in which the mass of the people had been hypocritically inculcated." Those who have recently seen the exhibition of Blake's work at the Tate Gallery will resent the contemptuous notice on page 250.

Highroads of Literature. Book V. (1s. 8d. Nelson.)

This is a reader that a boy or girl will be proud to possess.

Print, paper, binding, and, above all, the illustrations after famous pictures, will all prepossess him in its favour; and the contents will not belie the appearance. It will need no compulsion to make him read "Gulliver's Travels," "The Pilgrim's Progress," or "Robinson Crusoe," or, if he has a spark of poetry in him, "The Deserted Village" and Tennyson's "Morte d'Arthur." Indeed, Dryden's "Fire of London" is the only extract we should distinctly bar. We do not see much use in the exercises at the end. Each teacher should make them for himself. Lists of prefixes and suffixes to be learnt by heart are a snare. The Greek *amphi* does not mean "both or two." "Words which have the opposite, or nearly the opposite, meaning are called *antonyms*" (read *antonyms*) is a survival from the old grammars.

Cambridge Poets, 1900-1913. An Anthology chosen by AELFRIDA TILLYARD. (5s. net. Cambridge: Heffer.)

Sir Arthur Quiller-Couch, who contributes an Introduction, maintains that, if good poetry be worth writing, the attempt to write it must be worth something. Whether it is worth publishing is another matter that Sir Arthur leaves to the reader, contenting himself with welcoming this "small but sufficient volume" as proof that the poetic impulse is still strong in a University which is justly proud of its roll of poets. Among the thirty-eight young poets—eight of them women—we can point to no bright and particular star, but there is much promise and some fulfilment. Sir Arthur warns the younger generation of the tendency of modern lyricists to subjectivity. They have not learnt to purge the personal and re-clothe it in a form that appeals to the general. This may be a just criticism, but it is the last that a perusal of this anthology suggests to us. The prevailing weakness is rather vagueness and mysticism. There are scarce any *vers d'occasion*, and we welcome the lines to Grantchester written in Berlin, which remind us of Clough and the ghost story of Mary Ford and Jimmy Price; and we wish that we had space to quote "An Impression," by Harold Monro. There are others in the volume *non spes sed res*.

Anthology of English Verse. With Introduction and Glossary by A. J. WYATT and S. E. GOGGIN. Second Edition, revised and enlarged. (2s. 6d. Clive.)

The Copyright Act of 1911 has enabled the editors to add specimens of Meredith, Swinburne, James Thompson, and other recent poets. In the next edition we may hope to see Rudyard Kipling, William Watson, and the present Poet Laureate represented. The introductions prefixed to each poet are models of conciseness and precision. We doubt whether a glossary is the best form of annotation. Thus it fails to explain Spenser's "Ægloge," Herrick's "Triple Tun," and Praed's "Poonah-painting."

"Cambridge County Geographies."—(1) *Northumberland.* By S. RENNIE HASSELHURST. (2) *Merionethshire.* By A. MORRIS. (1s. 6d. each. Cambridge University Press.)

The two latest volumes of this series, which is nearing its completion, fully maintain the reputation that it has won among teachers. Geography is wisely interpreted in its widest sense as including not only topography and geology, but antiquities, ethnography, local history, and economics, and both the photographer and cartographer have been called in aid. Mr. Haselhurst is a specialist in geography and a teacher of wide experience. His account of the geological formation of Northumberland is full and clear, as is the physical map, but the colours of the geological map are not always distinct. The Roman Wall has, as it deserves, a chapter to itself, fully illustrated, and the researches of Bruce, Hulton, and John Clayton have been well digested. Some reference might have been made to the latest investigations of Pelham, Haverfield, and George Macdonald. The remarkable diagrams showing the changes in population and culture deserve a word of commendation.

"Merionethshire" will appeal to a narrower circle, and we wish Mr. Morris had condescended, for the sake of his Saxon readers, to give a few hints on Welsh pronunciation. Roman remains are scarcer in the county, and it was scarcely worth while to reproduce the "common forms" of prehistoric man. He has no doubt that the famous "Roman Steps," of which there is an effective photograph, were constructed by the Romans for the conveyance of mineral ore, but he does not solve the difficulty that they lead no whence and no whither. There is a useful section on Natural History (overlooked in "Northumberland"), and we may claim Mr. Morris as a brother of the gentle craft. "Shell Island" deserved a sentence.

A First English Grammar. By the Rev. JOHN E. W. WALLIS. (1s. G. Bell.)

This junior English grammar "embodies the recommendations (Continued on page 178.)"

FROM PITMAN'S LIST.

EXAMINATION NOTES ON FRENCH.

By F. W. M. DRAPER, B.A., Licencié ès Lettres, University of Paris; Author of "Pitman's Commercial French Grammar." Size $6\frac{1}{2} \times 3\frac{1}{2}$ in., cloth, 50 pp., 1s. net.

EXAMINATION NOTES ON GERMAN.

By A. HARGREAVES, Ph.D., Modern Language Master at the City of London School. Size $6\frac{1}{2} \times 3\frac{1}{2}$ in., cloth, 50 pp., 1s. net.

PITMAN'S COMPLETE MERCANTILE ARITHMETIC.

With Elementary Mensuration. By H. P. GREEN, F.C.Sp.T., Head Arithmetic Master, Pitman's School. Crown 8vo, cloth gilt, with Key, 646 pages, 4s. 6d. net. Complete book without Key, 600 pages, 4s. net. Key separately, 1s. net. Also in Three Parts:—Part I, 300 pages, 2s. 6d. net. Part II, 208 pages, 1s. 6d. net. Part III, 100 pages, 1s. net.

PITMAN'S COMMERCIAL LANGUAGE GRAMMARS.

In 4 Volumes, each in crown 8vo, cloth gilt, from 160-250 pages, 2s. 6d. net.

FRENCH. By F. W. M. DRAPER, B.A. (Cantab.).

GERMAN. By J. BITHELL, M.A., Lecturer in German at the Birkbeck College, London.

ITALIAN. By LUIGI RICCI, Professor at the University of London, &c.

SPANISH. By C. A. TOLEDANO, Spanish Master at the Manchester Municipal School of Commerce, Manchester Athenæum, &c.

FRENCH PROSE WRITERS OF THE NINETEENTH CENTURY AND AFTER. AN ADVANCED READER.

With Biographical and Critical Notices in French, and Literary and Bibliographical Notes in English. By VICTOR LEULIETTE, B. ès L., A.K.C. Crown 8vo, cloth gilt, 350 pages, 3s. net.

THE STUDENT'S GUIDE TO POLITICAL ECONOMY.

Crown 8vo, cloth gilt, 232 pages, 2s. 6d. net. By F. H. SPENCER, D.Sc., LL.B., Lecturer in Economics and Director of the Day Commercial School, City of London College.

INDUSTRIAL AND SOCIAL HISTORY.

By GEORGE COLLAR, B.A., B.Sc. (Lond.). The rise and progress of our various industries are clearly set out, and graphic descriptions are given of the social conditions of the people at different periods. Crown 8vo, cloth, with over 100 black-and-white Illustrations, 284 pages, 2s.

EUROPA'S CHILDHOOD and GROWTH.

3 An Historical Geography of Europe. By A. J. BERRY, M.A. (Oxon.), Director of Education, Preston. With over 100 Illustrations, 281 pages, Crown 8vo, cloth, 2s.

BRITANNIA'S GROWTH AND GREATNESS.

An Historical Geography of the British Empire. By the same Author. A descriptive work showing how the British Empire is the result of evolutionary processes. Crown 8vo, cloth, with many Illustrations, 304 pages, 2s.

THE ROMANCE OF OUR COLONIES; OR, PLANTING THE FLAG BEYOND THE SEAS.

By ROBERT HUDSON. Crown 8vo, cloth, with Coloured Frontispiece and 33 black-and-white Illustrations, 268 pages, 1s. 8d.

TEACHING COMPOSITION.

A Book of Modern Method, Practice, Suggestion, Experiment, and Experience. By J. EATON FEASEY. With an Introduction by J. A. GREEN, M.A., Professor of Education in the University of Sheffield. Crown 8vo, cloth gilt, 242 pages, with many Illustrations, 2s. 6d. net.

LESSONS IN COMPOSITION.

(For use with the above book, and by the same author.)
Book I. 10 full page Illustrations, 56 pages, paper, 4d.; cloth, 5d.
Book II. 7 full page Illustrations, 64 pages, paper, 4d.; cloth, 5d.
Book III. 4 full page Illustrations, 78 pages, paper, 5d.; cloth, 6d.

Write for Comparative Synopsis (post free) of the Recommendations of the Board of Education on the Teaching of English, the instruction and advice in "Teaching Composition," and the systematic exercises contained in "Lessons in Composition," showing how Mr. Feasey's remarkable books embody the latest and best views and opinions on the subject and accord completely with the intentions of the Board.

WRITE FOR COMPLETE LIST.

London: SIR ISAAO PITMAN & SONS, Ltd.
1 Amen Corner, E.O.

THE "A.L." GEOGRAPHIES.

A Series of small Geographical Textbooks for the use of Pupils in both Primary and Secondary Schools. They are **thoroughly up-to-date**, and great care has been taken to ensure accuracy of statement. They are **fully illustrated** with new **Sketch-maps, Diagrams, and Views**. They are written in an attractive descriptive style, and Teachers who are taking Geography on the most approved modern lines will find these little books an invaluable aid.

THE BRITISH ISLES.

80 pp., 31 Maps and Diagrams and 23 Illustrations. By W. T. TAYLOR, F.R.G.S.

AFRICA.

104 pp., 19 Maps, and 20 Illustrations. By T. FRANKLIN, A.C.P.

EUROPE.

104 pp., 11 Maps, and 28 Illustrations. By T. W. POWELL, M.A.

THE AMERICAS.

110 pp., 30 Maps and Diagrams, and 26 Illustrations. By W. E. WEST, B.Sc., F.R.G.S.

THE BRITISH EMPIRE BEYOND THE SEAS.

102 pp., 15 Maps and Diagrams, and 27 Illustrations. By J. H. TORBITT, M.A.

ASIA.

125 pp., 15 Maps and Diagrams, and 23 Illustrations. By HILDA M. BRADLEY, B.A., A.C.P.

Each published at 4d.; in cloth-lined cover, 5d.

BOOKS BOUGHT AT GOOD PRICES.

of the Joint Committee on Grammatical Terminology." It is, however, more conservative than the Recommendations, and in the first chapter there is a whole page on English genders. The introduction gives the eight parts of speech with (let us charitably suppose) provisional definitions. Holding as we do that analysis should precede parsing, we cannot but regard this as a mistake. Why trouble a boy with conjunctions till he comes to the complex sentence? On the other hand, analysis is well treated, and model examples are clearly tabulated.

Stitches from Eastern Embroideries. By LOUISA F. PESEL. Portfolio No. 2. (10s. 6d. net. Percy Lund, Humphries, & Co.)

Those who are familiar with Miss Pesel's First Portfolio will not fail to welcome its successor. The same plan is followed in the description of the various stitches, with diagrams illustrating the way in which they are worked. Many of the stitches in these Eastern embroideries seem more complicated than the English ones, and an unskilled worker may find some difficulty in reproducing them, even with all the aid given by Miss Pesel's careful drawings of the position of needles and silks; but the effect of the large variety of stitches is so good that no one will grudge a little extra time in working them out. Among the most attractive are those mentioned in the introductory note as Points 2 and 3, *i.e.* the braidlike edges and borders and the decorative joins, which turn a defect into a positive beauty. There are forty plates in monochrome and seven in colours, besides the plate representing a Janina table-cover in colour, with the materials, and the stitches used, minutely described with other details. At the bottom of each plate is a reference to the countries where such needlework is to be found.

The Schoolmasters Yearbook and Educational Directory, 1914. (12s. 6d. net. Yearbook Press.)

It will be noticed that "Educational" has been added to the title. The present issue contains not only schoolmasters but University Professors and teachers in technical colleges and institutions. This part is increased by sixty-two pages, and now has nearly fifteen thousand biographical notices. The Review of the Year has, as usual, sensible articles—one on the curriculum and one on the Government's proposed legislation.

"Herbert Strang's Library."—*Captain Cook's Voyages.* (Frowde and Hodder & Stoughton.)

The narrative of Cook's three great voyages, which occupy four volumes of Kerr's collection, have been judiciously boiled down, and no recent explorer can vie in interest with the greatest of circumnavigators. We could only wish that instead of the flamboyant illustrations there were a few simple maps.

The London Matriculation Directory, January 1914. (1s. net. W. B. Clive.)

This useful guide to the University of London Matriculation is too well known (the present is No. 66) to need description. The papers, as far as we have checked them, are neatly and accurately worked out.

SCIENCE.

Practical Physics for Secondary Schools. By N. H. BLACK and H. N. DAVIS. (5s. 6d. net. Macmillan.)

This is not a textbook of practical physics in the sense of being a guide-book to laboratory experiments. It is rather a course of physics, partly experimental, partly historical, and partly economic. Considerable stress is laid upon the application of the principles of physics to the machinery of daily life. A very interesting fund of information is gathered together in appropriate places in reference to electrical machinery, optical instruments, gramophones, automobiles, ships, vacuum cleaners, engineering structures, &c. The order of treatment is unusual, but the authors' claim that in teaching practice they find it to be a gradual progression from the simplest topics to the more difficult concepts. Briefly, the order of the various subjects dealt with is as follows:—Statics, Dynamics, Heat, Magnetism and Electricity, Sound and Light. There is, however, a considerable amount of overlapping, intended to impress upon the student the interrelations between the different manifestations of natural forms of energy and the essential unity of the subject. While the American style of composition and spelling, in which the book is written, will prevent many teachers from desiring to place it in the hands of their scholars, yet to the teachers themselves this book ought to prove particularly valuable in that it provides innumerable applications of the subject to daily life. Physics, too often, is a question of

(Continued on page 180.)

A NEW "IDOLA" SERIES

IDOLA LINGUARUM

THE JOURNAL OF EDUCATION will publish during 1914

A SERIES OF ARTICLES ON LANGUAGE TEACHING

 The Introductory Article, by Professor JOHN ADAMS, appeared February 1914.

The following subjects will be treated in the course of the year:—

- | | |
|---|--|
| 1. ENGLISH GRAMMAR. By Professor ADAMSON. | 6. THE REFORMED METHOD: For. |
| 2. ENGLISH LITERATURE AND LANGUAGE.
By Miss LILIAN FAITHFULL. | 7. THE REFORMED METHOD: Against. |
| 3. ENGLISH COMPOSITION. | 8. FRENCH. By CLOUDESLEY BRERETON. |
| 4. GREEK. By Professor GILBERT MURRAY. | 9. GERMAN. |
| 5. LATIN. By Professor CAMPAGNAC. | 10. MODERN LANGUAGES v. CLASSICS. By
THE EDITOR. |

NOTE.—The Fifteen Numbers containing the previous series (IDOLA PULPITORUM) can still be obtained, price 23s. the set

From Mr. Heinemann's List.

A COMMON-SENSE ALGEBRA.

By ASA BURNISTON, L.C.P. (Hons.) **Crown 8vo. Price 1s. 6d. With Answers, 2s.**

This is essentially a book for beginners, and it has one merit which marks it out especially in these days of hurry—it caters for the dull and backward pupil no less than for the more brilliant. The exercises are numerous and well-graded, and there is constant revision of work done.

ELEMENTARY BUSINESS TRAINING.

By VICTOR H. ALLEMANDY. **Crown 8vo. Price 1s. 6d.**

This book presents in an interesting form a course in the principles of business routine, and aims at giving boys and girls a knowledge of the minor duties expected of them when they enter commercial life. There are numerous exercises, and ten test papers containing *actual* examination questions.

A FIRST-YEAR COURSE IN GENERAL SCIENCE.

By G. A. GARDINER, M.A., F.C.S., Senior Science Master at Berkhamsted School. **Crown 4to. 2s. 6d.**

This is a combined Textbook and Notebook presenting an experimental course of general elementary science. Tables are provided for results and blank pages for notes. There are a large number of exercises, both practical and mathematical.

Applications for Specimen Copies should be addressed to Dept. J.E.

London: WM. HEINEMANN, 21 Bedford St., W.C.

"SWAN" FOUNTAINS

From
10/6

All Stationers sell "Swans." We maintain in perfect order. Every "Swan" is guaranteed. We allow for other and old pens. We can match any steel pen.

DUSTLESS SCHOOLS

ON ALL

School, Laboratory, &c., Floors & Linoleums of every description,

USE FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

EARLY in the EASTER VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE,

and is strongly recommended by Medical and other expert authorities.

It costs little, and is easily applied. Not sticky—the ordinary daily dry sweeping alone required—scrubbing being optional.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only during each sweeping (without sprinkling of any kind), but also throughout all the intervening periods—which is even of greater hygienic importance. It also saves time and labour.

"Florigene" is being continuously used on the floors of The Royal Naval Colleges, and numerous Schools, Laboratories, Libraries, &c., in the United Kingdom and Colonies with approval.

A BOOK THAT "MAY BE USED WITH ADVANTAGE WITH ANY FRENCH GRAMMAR."

EIGHTH EDITION. With Supplementary Easier Exercises.

Fcap. 8vo, cloth, interleaved. Price One Shilling.

Hints on French Syntax.

By **FRANCIS STORR**, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission. University of London, &c., &c.

London: **WILLIAM RICE**, 3 Broadway, Ludgate Hill, E.C.

principles alone. Here it becomes a systematized branch of knowledge in relation to its human interest. The book is well printed and illustrated, and contains many fine photographs of great physicists, of machinery, and of bridges. Questions and problems are appended to each chapter, and a particularly useful feature is added in the form of a boldly printed summary of the results and principles which have been elucidated.

An Introduction to the Chemistry of Plant Products. By PAUL HAAS, D.Sc., Ph.D., and T. G. HILL, A.R.C.S., F.L.S. (7s. 6d. net. Longmans.)

Probably the most fortunate thing for the progress of any science is for it to be studied by minds trained in another branch of knowledge, who attack the old problems with a new technique and view them from a new standpoint. The most interesting developments in biology during the present century have arisen in the new science of heredity which has engaged the mathematicians, and the new development of physiology which is almost made over to the chemist and physicist. More and more the biologist is being led to extend his education to embrace chemistry, the statistical treatment of numbers, and the physics of permeability and diffusion. It is for the education of biologists that this book has been written. The authors, Dr. Haas a chemist, and Mr. Hill, a plant physiologist, have produced a very valuable work, which deals with the occurrence, chemistry, and physiological significance of the principal substances obtained from plants. It is very clearly and straightforwardly written, and the method of treatment makes the information very easily accessible. It is, however, surprising to find that there is no mention of rubber, isoprene, or latex, although there is a section dealing with colloids. While this omission and the absence of any account of the resins is probably intentional—as there is a large bibliography dealing with the chemistry of rubber—yet it is difficult to understand why the authors have left turpentine unmentioned. However, except for these omissions, the book is admirable and will be found exceedingly useful to students beginning the study of biochemistry. The print is good and there is an excellent index.

A Treatise on Chemistry. Vol. II: *The Metals.* By H. E. ROSCOE, F.R.S., and C. SCHORLEMMER, F.R.S. Fifth Edition. (£1. 10s. net. Macmillan.)

This magnificent volume has now, and deservedly, reached its

fifth edition, the fourth having been prepared seven years ago. The general character of the book is too well known to require description here, but attention may be called to several noteworthy alterations and additions. Perhaps the most important of the new sections is that contributed by Dr. Makower on Radioactivity. He has written a clear and thoroughly up-to-date account of the fundamental principles and of the most recent developments of this young and significant science. Prof. Barker has revised and added to the chapter on Crystallography, and he is to be congratulated on having produced the best short account of that difficult subject which is to be found in English textbooks. The importance of crystallography, now that it has progressed beyond the stage of mere goniometric description, cannot be overestimated, and the chemist is among those who will benefit most by its recent advances. The general and physical chemistry has been revised by Prof. Philip, and here again the result has been worthy of all praise. In the main section of the work—that dealing systematically with the metals and their compounds—Sir Henry Roscoe has availed himself of the metallurgical experience of Mr. Bannister, and other equally capable specialists have assisted in the treatment of the rare earths and of various branches of chemical technology. Thus, it will be seen that this great work will be of the utmost value to chemists of all types, whether they be engaged in study, in research, or in economic practice. Excellent diagrams, copious references to original papers and memoirs, and a full index complete the excellent fare which the chemist is offered in this altogether admirable volume.

Flowerless Plants. By S. LEONARD BASTIN. (6s. net. Cassell.)

This volume is one of a series of Nature books published by Messrs. Cassell, and deals with ferns, mosses, liverworts, seaweeds, lichens, and fungi. The author has not assumed that his readers will possess a knowledge of technical botanical matters, and he has succeeded admirably in presenting his subject clearly and in a most interesting manner. The beautiful photographs from life, about eighty in number, add enormously to the value of the book, and will enable the least experienced of observers to identify the plants under consideration. It is an excellent book to give to a boy or girl, and is exactly the kind of work to arouse interest in Nature study.

A COURSE IN ENGLISH GRAMMAR

EDITED BY

PROFESSOR J. W. ADAMSON.

LESSONS IN SPEAKING, READING, AND WRITING ENGLISH

(Book I of the English Edition of "THE MOTHER TONGUE").

Revised by JOHN W. ADAMSON, B.A., Professor of Education in the University of London. 308 pages. Illustrated. Price 1s. 6d.

IN PARTS FOR USE IN THE LOWER FORMS.

In response to repeated requests from heads of schools all over the kingdom, the publishers have much pleasure in announcing that they now issue this well-known book in a style more suited to the needs of the pupils in the lower forms.

The book is divided as follows:—Part I. 106 pages. 6d. Part II. 92 pages. 6d. Part III. 154 pages. 9d.

Each part contains numerous exercises—both written and oral—to help the pupil to speak and write his mother tongue; and passages of simple prose and poetry, chosen from standard authors, for reading and memorizing. There is nothing *cheap* about these books except the price. They are printed from the same clear type on equally good paper as the complete book. They contain the same illustrations and are strongly and attractively bound.

THE PRACTICE OF ENGLISH

(Book II of the English Edition of "THE MOTHER TONGUE").

Edited by J. W. ADAMSON, Professor of Education in the University of London, and A. A. COCK, Lecturer in Education in King's College, London. 363 pages. Price 2s. 6d.

An edition in three parts is in active preparation.

This new volume contains a complete course in composition and such grammar as is necessary for the more advanced practice of the mother tongue. A special feature is the adoption of the principal recommendations of the recent Report on Grammatical Terminology, published through the English Association.

The exercises in composition are designed to serve as an introduction to literary appreciation and criticism; for this purpose the book is well provided with examples of standard prose and poetry.

The first part deals chiefly with narration and the auxiliary grammar; the second with description and its necessary grammar; while the third part is devoted to exposition and criticism, the rest of the grammar, and an appendix on prosody. The work also contains a short prefatory essay on the use of the book.

Complete Catalogue post free on application. Books sent on approval to Teachers.

GINN & COMPANY, ST. MARTIN'S STREET, LONDON, W.C.

BLACK'S NEW GEOGRAPHIES

By J. B. REYNOLDS, B.A.

JUNIOR REGIONAL GEOGRAPHY OF ASIA.

Small Crown 8vo. Containing 62 Illustrations. Cloth. Price 1s. 4d.

This book has been written to suit the needs of children in the upper classes of Elementary Schools, and the lower and middle classes of Secondary Schools.

Simple maps have been inserted to clearly define the natural regions selected. Other diagrams illustrate the essential physical and political features of the regions, &c.

By AGNES NIGHTINGALE.

A Practical Pictorial Method of Teaching Introductory Geography.

VISUAL GEOGRAPHY.

Small Crown 4to.

Book I. Price 8d. Containing 23 Page Outline Pictures for Colouring. Book II. Price 8d. Containing 22 Page Outline Maps for Completing and Colouring.

Book I deals with the sun and the Circulation of the Water System, Land Forms, and Typical Environments, while Book II deals with Continents, and Countries. The books have been so arranged that there is "something to do," as well as something to see and read about, for the outline pictures are to be filled in with crayons or water colours by the children themselves.

By H. CLIVE BARNARD, M.A., B.Litt.

PICTURES OF FAMOUS TRAVEL.

Containing 58 Illustrations, of which 32 are in Colour. Crown 4to. Price 1s. 6d. Cloth.

The present volume is designed as an adjunct to the geography and the history lesson alike. It covers in outline the history of geographical discovery from the days of the Phenicians down to the recent conquest of the North and South Poles.

More than a Million Copies of PROF. LYDE'S GEOGRAPHIES have been sold.

SCHOOL GEOGRAPHY OF THE WORLD.

By Prof. L. W. LYDE, M.A., F.R.G.S.

Professor of Economic Geography in the University of London.

NEW EDITION (8th), REVISED AND ENLARGED, CONTAINING PROBLEMS AND EXERCISES ILLUSTRATED BY DIAGRAMMATIC MAPS.

Crown 8vo. Price 3s. 6d. Bound in cloth.

NOTE.—New Editions of all PROF. LYDE'S GEOGRAPHIES, containing Problems and Exercises, illustrated by Diagrammatic Maps, are in preparation and will be ready during the next few weeks.

DETAILED PROSPECTUS ON APPLICATION.

IDOLA PULPITORUM: PITFALLS OF THE PRACTICAL TEACHER

This series of articles appeared in "The Journal of Education":—

INTRODUCTORY ARTICLE [in November 1906]. By JOHN ADAMS.

CLASSICS [in December 1906]. By H. G. HART.

ENGLISH [in January 1907]. By ARTHUR BURRELL.

FRENCH [in February and March 1907]. By CLOUDESLEY BRERETON.

SCIENCE [in April 1907]. By T. PERCY NUNN.

NATURE STUDY [in May 1907]. By T. RAYMONT.

HISTORY [in June 1907]. By S. S. F. FLETCHER.

PHYSICAL TRAINING [in July 1907]. By COLONEL MALCOLM FOX.

DRAWING [in August 1907]. By W. E. SPARKES.

DOMESTIC SCIENCE, &c. [in November 1907]. By ALICE RAVENHILL.

GEOMETRY [in December 1907]. By H. WINIFRED STURGE.

GEOGRAPHY [in January 1908]. By Dr. HERBERTSON.

MUSIC TEACHING [in June 1908]. By ARTHUR SOMERVILL.

ARITHMETIC [in July 1908]. By P. B. BALLARD.

Single copies of any one of the above numbers can be sent post free for 1s. 8d.; or the fifteen for £1. 3s.

For particulars of the new "Idola" series—**IDOLA LINGUARUM**—see page 178.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

BELL'S NEW BOOKS

BELL'S SIXPENNY ENGLISH TEXTS.

Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham. Fcap. 8vo. With Biographical and Critical Introductions. Limp Cloth, 6d. each. A Glossary is given where necessary.

This series will be found to be very clearly printed in large type, and should prove of great service to those who prefer that English literature should be read rapidly from the plain text.

FIRST LIST OF VOLUMES.

*Poems by John Milton.—*Spenser's "Faerie Queene," Book I.—
*Poems by Tennyson. — Selections from Byron. — *Macaulay's
"History of England," Chapter III.—Gibbon's "Decline and Fall,"
Chapters I to III.—Plutarch's Lives of Caesar and Cicero. *English
Elegiacs. — *Selections from Chaucer. — Kingley's Heroes.

The volumes marked with an asterisk are also issued interleaved, at 1s. each, bound in cloth boards.

A HISTORICAL COURSE FOR MIDDLE FORMS.

By B. L. K. HENDERSON, M.A., D.Litt., and P. MEADOWS, M.A., Assistant Masters at Haberdashers' Aske's School, Cricklewood. In Four Volumes. Crown 8vo. 2s. each.

Vol. I.—WESTERN EUROPE.

Vol. II.—THE ENGLISH NATION: INDUSTRIAL AND SOCIAL HISTORY.

Vol. III (in preparation).—CONSTITUTIONAL HISTORY.

Vol. IV (in preparation).—POLITICAL AND GENERAL HISTORY.

Distinctive Features of this Course are:—

1. The plan for providing for the four years of middle school life between the ages of twelve and sixteen.
2. The careful adaptation of each volume to a year's school work.
3. The combination of outlines and passages from original sources.
4. The separate treatment of the important aspects of national history.
5. The employment of questions which will necessitate on the part of the pupil reasonable exercise of comparison and judgment.

A PRACTICAL COURSE IN ENGLISH.

By E. J. BALLEY, M.A., Whitgift Grammar School, Croydon. 1s. 6d.

Designed to give the pupil a practical understanding of his mother-tongue and the use of it. The Second Part forms a generous compendium of Exercises in Analysis, Construction, Correction of Errors, turning Direct Speech into Indirect, and also a Set of Local Examination Papers in Grammar and Composition.

ENGLISH GRAMMAR.

By S. E. WINBOLT, M.A., and Rev. J. E. W. WALLIS, M.A. Christ's Hospital. In Three Parts.

Just Ready, Part I.—A First English Grammar. By the Rev. J. E. W. WALLIS. Cloth 1s.

This course is designed to give the "irreducible minimum" of English Grammar in as clear a manner as possible. It should prove invaluable to those who still believe in the virtue of formal grammar, but are unwilling to spend too much time on it.

EXERCISES IN ENGLISH.

By FRED. W. BEWSHER, B.A., St. Paul's School. Crown 8vo. 144 pp. 1s. net.

Intended to serve as a second part to "Aids to the Writing of English Composition." Its object is twofold: to endow the pupil with a greater command of words and a fuller knowledge of framing sentences, and to make him familiar with questions set at the various examinations. The recommendations of the Joint Committee of Grammatical Terminology are followed throughout.

A FIRST NUMERICAL TRIGONOMETRY

By W. G. BORCHARDT, M.A., B.Sc., and the Rev. A. D. PERROTT, M.A. 2s. 6d.

Written to supply the growing demand for a textbook on Trigonometry suitable for the lowest classes of secondary schools, and to meet the recommendations of the Mathematical Association Committee on the "Teaching of Elementary Algebra and Numerical Trigonometry," 1911.

JUNIOR TRIGONOMETRY.

By THE SAME AUTHORS. Crown 8vo. 3s. 6d.

An enlarged edition of the above book, containing chapters on Identities, Equations, and compound Angles, will be found suitable for such examinations as the Cambridge and Oxford Junior Locals, First Class College of Preceptors, Additional Mathematics of the Central Welsh Board, Oxford and Cambridge School Certificates, Scotch Leaving Certificate (Higher Grade), and the Lower Examination in Pure Mathematics of the Board of Education.

BELL'S FRENCH PICTURE CARDS.

Edited by H. N. ADAIR, M.A. Third Series. Printed in Colours. 1s. 6d. net per set.

This series is distinguished from Series I and II by the fact that each card illustrates three scenes from a story. Questionnaire on the back of each card.

ANCIENT HISTORY FOR SCHOOLS.

From the Earliest Times to the Death of the Emperor Augustus.

By E. NIXON, late Head Mistress of the Junior School, Ladies' College, Cheltenham, and H. R. STEEL. Illustrated. 2s.

EARLY ENGLISH HISTORY FROM THE CHRONICLES.

By A. F. DODD, B.A., Greystoke Place Training College. 2s.

BRITISH CHURCH HISTORY

(TO A.D. 1000).

By the Rev. W. H. FLECKER, M.A., D.C.L., Head Master, Dean Close School, Cheltenham. 1s. 6d.

REPRESENTATIVE EXTRACTS FROM ENGLISH LITERATURE.

Chosen by W. H. HUDSON. viii + 338 pp. 2s. 6d. net.

The already large numbers who are using Professor Hudson's "Outline History" have been awaiting this volume, which should prove invaluable for illustrating and amplifying his brilliant narrative.

A SHORTER ALGEBRA.

By W. M. BAKER, M.A., and A. A. BOURNE, M.A. 2s. 6d.

This book has been produced in response to many requests from teachers in Mathematics. It is in no sense a condensation of the same authors' "Elementary Algebra," but an adaptation expressly to suit the requirements of the following and similar examinations:—London University Matriculation, Cambridge Local Preliminary and the Pass Junior Examinations, Oxford Local Preliminary and Junior, &c., &c.

A SOURCE BOOK OF LONDON HISTORY.

From the Earliest Times to 1800.

By P. MEADOWS, M.A. Crown 8vo, 1s. 6d. net.

This book is intended for those who realize the value and importance both of local history and of original material as giving vividness and interest to the history lesson. It consists of a great number of selections from contemporary sources connected together by a narrative which traces the development of the capital from the earliest times to the end of the eighteenth century.

London: G. BELL & SONS, Ltd., Portugal Street, Kingsway, W.C.

METHUEN'S

New Educational Books.

Just Published.

Junior Scripture Examination Papers: Old Testament. By Rev. S. A. P. KERMODE and Rev. W. WILLIAMSON. Fcap. 8vo, 1s. This is a new volume in Methuen's popular series, Junior Examination Series, suitable for teachers and pupils in Lower and Middle Forms.

The Boys' Prayer Book. Compiled by ALEX DEVINE, Head Master of Claysmore School, Pangbourne. Medium 16mo, 1s. 6d. net. A collection of prayers, prefaced by appropriate texts, for almost all the necessities of school life.

Practical Science for Engineering Students. By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. Crown 8vo, 3s. This book contains a series of experiments in Heat, Mechanics, and in Magnetism and Electricity, together with some general experiments embodying important principles.

A SELECTION FROM METHUEN'S LIST.

Junior English. By F. J. RAHTZ, M.A., B.Sc., Senior Lecturer at Merchant Venturers' Technical College, Bristol. Ninth Edition. Crown 8vo, 1s. 6d.

This book is intended for the Lower Forms of Secondary Schools. It deals with Grammar, the Construction of Phrase and Sentence, Analysis, Parsing, Expansion, Condensation, Composition, and Paraphrasing, and many other Exercises in the use of English. The Questions and Exercises are numerous and varied.

Higher English. By F. J. RAHTZ, M.A., B.Sc. Eighth Edition. Crown 8vo, 3s. 6d.

This book provides a much-needed course in the study of modern English, suitable for pupils in the Upper Forms of Secondary Schools. Examination Papers set recently at London University are added.

A Short History of Rome to the Death of Augustus. By J. WELLS, M.A., Fellow and Tutor of Wadham College, Oxford. With 3 Maps and 4 Plates. Thirteenth Edition. Crown 8vo, 3s. 6d.

"The schoolmasters who have felt the want of a fifth-form handbook of Roman history may congratulate themselves on persuading Mr. Wells to respond to it. His book is excellently planned and executed. Broken up into short paragraphs, with headings to arrest the attention, his manual does equal justice to the personal and the constitutional aspects of the story."—*Journal of Education*.

A Junior History of Great Britain. By E. M. WILMOT-BUXTON, F.R.Hist.S. Second Edition. Crown 8vo, 2s.

This book gives a systematic and interesting account of the history of Great Britain to pupils of ages ten to fourteen, who have hitherto studied the subject in the form of "Stories."

A History of Great Britain. From the Coming of the Angles to the Year 1870. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 20 Maps. Fourth Edition. Crown 8vo, 3s. 6d.

This book attempts to break through the conventional lines on which History Class-books are laid down. With very few exceptions these books make the reign, the chapter-limit, and take each event in chronological order. In this book the old system has been entirely discarded, and each chapter will be found to deal with one great movement, which is traced in cause, events and result.

The Complete School Chemistry. By F. M. OLDHAM, B.A., Senior Chemistry Master at Dulwich College. With 125 Illustrations. Seventh Edition. Crown 8vo, 4s. 6d.

A complete course in practical and theoretical chemistry up to the standard of the London Matriculation and Army Entrance Examination. It is so arranged that a boy with no knowledge of chemistry may begin the book and use it throughout his progress up the school. Short courses on volumetric analysis and on the common metals are included.

A First Year Course of Organic Chemistry. By A. E. DUNSTAN, D.Sc. With 2 Plates and many Diagrams. Crown 8vo, 2s. 6d.

This book, which has not been prepared to meet the requirements of any particular examining body, is intended for the use of the higher forms of schools taking the special Science Course, and as a first year textbook in Technical Institutes.

A Second Year Course of Organic Chemistry. By F. B. THOLE, B.Sc., Lecturer in Organic Chemistry, East Ham Technical College. With Plates and Diagrams. Crown 8vo, 2s. 6d.

This book forms Vol. II of a series designed to meet the requirements of students in Technical Institutes. It deals with that portion of the subject necessary for the second year student, and covers the syllabus for Stage II of the examination held by the Board of Education. It is hoped, however, that it will be found useful for those students taking the first year of their B.Sc. Course.

Elementary Experimental Science. Physics by W. T. CLOUGH, A.R.C.S., Head of the Physics and Electrical Engineering Department, East Ham Technical College; **Chemistry** by A. E. DUNSTAN, D.Sc. With 2 Plates and 154 Diagrams. Thirteenth Edition. Crown 8vo, 2s. 6d.

This book is primarily intended for the use of candidates taking Experimental Science in the Junior Local Examinations. It will also be found of use to those competing for County Council Intermediate Scholarships, and as a general textbook in Science Schools. The great majority of the Diagrams have been specially drawn.

IDOLA LINGUARUM.

I.—ENGLISH GRAMMAR.

By Prof. J. W. ADAMSON.

"IT will be proved to thy face that thou hast men about thee that usually talk of a noun and a verb, and such abominable words as no Christian ear can endure." The commentators, being themselves much akin to the grammarians, understand this and similar denunciations found in "Henry VI" as intended to mark the abysmal ignorance of Cade and his friends. The plain man, recalling his own schooldays, is disposed to believe that the Stratford school-boy is here "getting back some of his own" from Lily and the schoolmasters. The offence of Saye is not that "noun" and "verb" sometimes disguise his meaning, but that he, or the grammar masters whom he has brought into practice are habitually troubling the plain man with uncouth and unnecessary terms.

In the nature of things, Cade was not strong in historical studies; had it been otherwise, he would have known that the pedantry which offended him did not originate with Lord Saye's schoolmasters, but was at least as old as the Donat. Most probably it is as old as the grammarian himself; whether or not, it had enjoyed a prescription of some eleven centuries when the Kentish men made their complaint. English writers on grammar, who belonged to the generation following Cade's, honestly desired to reach the intelligence of the schoolboy, and their books show that they were more successful than their predecessors in this respect. But, even these more sympathetic persons continued to offend "Christian ears" with inkhorn terms which represented hair-splitting and the titling of mint and cumin. "Of nouns, some be propre, some appellatyf, some substantyf, some adjectyf, some interrogatyf, some demonstratyf, some reddityf, and some relatyf." "There be many significacions of adverbis," says John Holt, and thereupon

specifies no less than thirty-three different sorts of adverbs. All these distinctions and their several names occur in "Lac puerorum, Mylke for Children," a book which greatly lightened both the toil *and the pain* of the schoolboy contemporary with Cade's grandchildren.

It is true that the little sufferers in whose behalf Stanbridge, Holt, Colet, Lily, and others laboured, owed their troubles to the grammar of the Latin tongue. But the pleasure which some minds find in minute classification and in the making of a technical language ("such abominable words as no Christian ear" can tolerate) is a pleasure to be derived from any language, if only the extractor be perverse enough. Consequently, illustrations abound in textbooks of English grammar written yesterday or to-day. As a test, try their treatment of the adverb, "the general sink of grammarians," as one of the guild expressed it long ago.

The truth seems to be that the grammarian's temperament, type of intelligence, or both combined, dispose him to over-subtlety, and an excessive fondness for form, where words are concerned; to indulge his fondness he is ready, like the medieval schoolman, "to find knots in a bulrush," and, generally, to believe that terminology and classification are their own sufficient reason. The critics of the schoolmaster have always alleged that he overvalues form—or rather, thinks too cheaply of the time and labour which are necessary in order to make form anything more than an empty phrase. The criticism is to-day taken to heart by the criticized in a mood more chastened than perhaps has ever been exhibited by their professional forbears. Even so, English grammar is still often taught as a purely formal study, a discipline or training which is an end in itself.

It used to be said frequently, perhaps still is occasionally said, that English grammar is the Logic of the English elementary school. But what Logic? Is it to be the arid, formal, squirrel-on-a-wheel kind of study which expressed the decay of Logic itself, or the type which is richly concrete and full of life, just because it is followed, not as pure form or an end in itself, but as a study and a criticism of the method by which knowledge is attained? Modern Logic does not encourage the drawing of distinctions merely for delight in the exercise, and it is as severe as the old in condemning cross-division, ambiguity, and similar fallacies, in which, nevertheless, the teaching of English grammar sometimes abounds. It may be said of Grammar, as John of Salisbury said of Logic, that, while it may be used to facilitate other studies, "if it be solitary, it lies bloodless and sterile, nor can it fertilize the soul to bear the fruit of knowledge, if it conceive not from another."

Grammar, the science of language, is associated inseparably with the corresponding art, the full expression of meaning, whether in writing or by word of mouth. True, this art is not acquired primarily through grammar; neither does the swimmer attain equilibrium by means of the purely theoretical study of hydrostatics. But, directly learning to speak passes beyond the casual, imitative stage (essential as that stage is), and, immediately systematic study of expression begins, general terms and general principles either challenge the learner's attention or facilitate his task. Forbid a teacher of composition the use of grammatical terms, or reference to general principles of language, and his work is enormously increased, if not made impossible. If grammar in this sense did not exist, the teacher of rhetoric would have to invent it. As a fact, he did invent it; men had no use for grammar until they became students of the art of expression. That fact both exposes the function which English grammar should discharge in English schools, and conveys a warning against the possibility of its misuse.

A vernacular grammar is taught as an auxiliary to the teaching of composition in the native language; it confers other services, but this is the reason why it has a place in the curriculum. As a mere matter of convenience, "noun," "verb," "adjective," are necessary to the teacher of language, spoken or written; anything less concise than their employment would be an intolerable waste of time. But the true justification for using any term is that it conveys a

precise meaning, expresses an idea which otherwise would elude attention; and the teacher of grammar will consider before he introduces a grammatical term whether the underlying idea is fruitful in the practice of composition. A terminology so chosen and consistently applied will in the end confer a habit of scrutinizing language, an attitude of mind which must be acquired, if the art of composition is to be mastered. This is no small claim on behalf of any kind of instruction to rank as a discipline; if that claim is made good, the teacher of grammar may rest content.

The point to secure is, not the multiplication of terms, but the apprehension of function. "What is the use of this word, or phrase, in speaking and writing English? How does its employment affect the expression of meaning?" These questions cannot be answered apart from the study of sentences; and sentences are the stuff upon which the little child from the first exercises his wits when learning to talk. His curiosity to learn names—that is, single words—is a mere incident, which must not obscure the fact that he himself uses sentences, the verbal equivalents of judgments, although the mere grammarian may see in them only "nouns," "verbs," "interjections," together with tones, gestures, grimaces, which, happily, have not been reduced to a generally accepted classification.

If the sentence be the unit of language and the pupils are competent to make sentences, it would seem that a study of "the eight parts of speech" is not one for absolute beginners. It is indeed a very ancient example of that premature introduction of the formal which is the very Mephistopheles of the schoolroom, always tempting the teacher to take the less excellent way. It is pretty generally agreed amongst observers of children that they learn most quickly and most effectively when they make their own analysis of whatever is to be learned. But the "eight parts of speech" are an analysis ready-made, elements, not combinations discharging actual, concrete functions. They are dead bodies under a glass case, which may be made interesting in exceptional circumstances; but the child will learn most about them if he is made to note their behaviour when alive in true speech.

So far, then, Jack Cade appears to be a sound theorizer. Instead of troubling the beginner with "noun" and "verb," we should invite him to examine the structure of sentences and the several functions of their parts. So great is the tyranny of "the abominable words" that even those teachers who begin with "analysis of sentences," yet propose for earliest examination such unreal "sentences" as "birds fly," "dogs bark," "fishes swim," these being clumsy contrivances for insinuating "noun" and "verb" at the very first opportunity. If a little child ever utters so trite a judgment as "dogs bark" on his own initiative, then he *means* very much more than the two unaided words can convey. "Hark, how angry are those barking dogs!" "Dogs don't talk, or shout, or neigh; they *bark*." But "dogs bark"—never!

The first lessons in a vernacular grammar are examinations of the structure of simple but natural sentences, such as children actually use in conversation. Attention at first is focused upon predication, the assertion being the very heart of the sentence, as it is of the judgment itself. Being in no fear of Cade, then dead for a generation past, Stanbridge states the rationale thus: "What is to be done when an englysshe is gyven to be made in latyn? Fyrst the verbe must be lokod out & If there be moo verbes than one in a reason [judgment, sentence] I must loke out the pryncypall verbe." The procedure holds for English, French, German no less than for Latin. With the predicate the subject will naturally be associated; the modifiers of these two essential members of the sentence are easily recognizable, whether they be adverbs, adjectives, or participles, and whether they be expressed in single words or in phrases.

When these four constituents of the sentence (viz., predicate, subject, modifiers of the predicate and of the subject) are understood in such a way that the pupil can note their employment in his own speech, the more difficult relational constituents, namely the preposition and conjunction, may be introduced in the same manner, that is, as embodied in the actual language used by the pupil himself. When the scheme

of the sentence is thus far familiar to the learner, he may turn his attention to single words; "parsing" is now intelligible, and the rules of syntax are appreciated. The "parts of speech," instead of being reserved for separate treatment, emerge at different stages of the analysis. For example, a predicate always contains one outstanding, asserting word, *the* word, or *verbum*, of the sentence; the subject is commonly a name, or a word which takes a name's place, noun or pronoun. These also appear in the predicate; and the exact relation between verb and noun, or noun and noun, is expressed by a preposition. Similarly the conjunction shows the relation between sentence and sentence, or word and word. Predicates and verbs, subjects and nouns, are modified in meaning by the use of adverbs and adjectives and their like.

The actual analysis, or dismemberment, of sentences may be carried far with the minimum use of technical terms; indeed, the aim should be, at first, paucity of terminology. The premature use of such a term as "adjective" or "adverb" may obscure the idea underlying the term itself, so that a child fails to recognize the identical function of an adverb and an adverbial phrase. Usage makes it possible for the German teacher to employ terms which are self-explanatory, and Holt, four centuries ago, used such terms as "the showing mood," "the asking mood," "the bidding mood," and so on. But there is an obvious economy in a technical term, once it is clearly understood, and the task should be to secure this understanding as soon as possible. The process is materially shortened, and the grammatical conceptions are more fully appreciated, when the analysis of sentences is made in a graphic form which at a glance displays the relation of one member of the sentence to another. Whatever scheme of analysis is adopted, it should have this merit in the first place, and, secondly, it should be elastic, easily changed in accordance with the structure of individual sentences, yet preserving a general stability of plan. It is to be regretted that the scheme in general use possesses none of these advantages, its very stability being of the unadaptable, wooden kind. A scheme which appeals to the eye has the additional merit that it can be used with the minimum of technical terms, if the teacher prefers to employ these very sparingly. But the teacher of English grammar, being also *ex hypothesi* the teacher of English composition, will certainly habituate his pupils in grammar to a terminology full and precise enough to be helpful in directing and correcting their composition.

The analytical study of the sentence not only serves as an auxiliary to rhetoric; it has a part to play in the lessons on literature. Most of the exercises which are intended to ensure or to discover the pupil's understanding of a classical author may be replaced by grammatical analysis. A boy who can exhibit the relation of the several parts to each other of a sentence in "Paradise Lost" has, at least, a grip over the general sense of the passage; inability to analyse the passage into predicate, subject, and their "modifiers" is a token that such an understanding is wanting. It is the exception, not the rule, that failure to comprehend is due to the presence of one or two unfamiliar "hard words"; the whole frame and intent of the passage really constitute the pupil's difficulty.

Teachers of English grammar are in substantial agreement that the beginning of grammatical study lies in the analysis of sentences. If this agreement is based on sound principles, it should apply also to the teaching of a foreign grammar—Latin, Greek, French, or German. Every teacher of these languages knows the trouble experienced by the learner in grappling with dependent sentences, whether in composition or in translating. A slavish adherence to the grammar book allows many a teacher to be content with instilling a variety of rules to meet particular cases, the number of the rules constituting one more difficulty. Yet some of the rules would be superfluous, and all of them would be more instructive, if it were the normal procedure for the pupil to analyse his sentences. If a graphic scheme were used for the purpose, the loss of time would be very small. The rules about concord and agreement generally scarcely need formulating

for a boy who is practised in noting the functions discharged by words and phrases in the sentence.

It may be argued that in the case of highly inflexional languages there is no need for sentence-analysis; every word bears its own label in its inflexion, which earmarks it for the duty of the moment. But the pupil must understand *why* a particular inflexion, and not a different one, must be used in the particular instance; and to achieve this understanding he must survey the sentence as a whole. If the pupil's vernacular is almost destitute of inflexion (as in English) whilst the language he is learning is rich in such forms (as in Latin), then the advisability of proceeding by way of analysis is all the greater.

Still, it is not surprising that the teachers of highly inflected languages like Latin and Greek adopted "parsing" as the fundamental form of grammatical exercise the inflexions themselves invite it, and inflexions confront the learner from the beginning. The school being one of the most conservative of human institutions, it was only to be expected that the traditional plan of teaching Latin grammar would be adopted, without change, for the teaching of English grammar. Hence the persistent, yet inappropriate, employment from the outset of parsing and of those terms which vexed the ears of the Kentish comrades. Parsing, that is, the consideration of the functions of single words, in any effective form is only possible when the main structure of sentences is clearly apprehended. Until that stage is reached the pupil can give only casual attention to individual words.

The kind of teaching here adumbrated is necessary for all pupils, whether they are to learn or not to learn other tongues than their own. The purely English scholar needs it as an auxiliary to the study of English composition; the English child who is about to study a second language needs it for the same purpose, and also for an introduction to the science of language in general, a "feeling" for which can scarcely be cultivated without reference to the vernacular. Bearing this second kind of pupil in mind, is it possible to maintain the paucity of technical terms which would suffice if the only language in view were, like English, relatively very poor in inflexions? Clearly, it cannot; the inflexions must be named.

On the other hand, whatever terms are employed as common to the vernacular and the foreign tongue, they must not sacrifice the idiom of one of these for the sake of the other. Common terms must honestly represent common conceptions. And in every case the layman is advised to suspect the grammarian's readiness to revel in a welter of technicalities; history shows this to be the badge of all the tribe. Economy of terms would be secured if it were agreed that, so far as single words go, special names should only be bestowed where the words themselves vary in form or inflexion. No inflexion, no technical term. This rule would sanction the phrase "optative mood" in Greek, but disallow it in English, since the latter expresses an aspiration by a periphrasis, not by an inflexion; it would recognize a subjunctive mood in English ("If I *were* going," as against "I *was* going"), but not a potential mood. It may be expedient to introduce a new term, for the sake of clearness, but any addition to the technical vocabulary is to be deprecated. It is a pity that the Joint Committee on Grammatical Terminology thought it necessary to replace the long established "compound sentence" by the names "double or multiple sentence." Writers on English grammar, at least, are fairly agreed to connote the interdependence of two or more sentences by the term "complex," whilst "compound" implies independence. The terms are applicable to other languages than English, and the distinction between the notions "compound" and "complex" is more than conventional. The Committee's desire to secure "compound" for service in "compound prepositions" ("because of") and "compound conjunctions" ("in order that") is merely the cropping up of the old, unregenerate Adam. The unsophisticated person would mark these locutions as "prepositions," "conjunctions," or, at the most, as "prepositional or conjunctive phrases." What is gained by the additional designation?

Unwillingness to add needlessly to "terms of art" rules out the meaningless "objective case" and the superfluous "possessive case," which have become stereotyped in English grammars. The boy who is to learn not only English, but Greek or German, will be helped by using the venerable "genitive"; the boy who will learn no foreign tongue suffers no loss by substituting the same word for "possessive." Indeed he will profit by the exchange if the terms are applied in respect of form rather than meaning.

The pointless name, "objective case," obscures the fact that the English dative survives in the pronouns "him" and "her," and that this ancient dative also discharges the office of an accusative now obsolete. The distinction between these cases is not only highly important from the standpoint of function. It exists and demands attention in such idiomatic sentences as "I gave *him* a book," "they threw *her* a bouquet." Ignoring alike the idiom and the function of the dative, which is found in all languages generally taught in schools, some describe "him" and "her" in these sentences as "in the objective case governed by 'to' *understood*." As a matter of fact no Englishman ever feels any need to "understand to" in such cases; it is a grammarian's subterfuge. Both in the interest of parsimony of terms and the recognition of a fundamental linguistic idea, "objective" should be suppressed and "accusative" and "dative" regain their rightful places. This would involve in English grammar the use of a convention that all prepositions "govern" the accusative. Apart from the fact that such a convention states a tendency historically observable in the Western tongues, it should be no more disturbing than the existing practice of making all prepositions "govern" the objective.

In sum, English grammar is taught in order to ease the teaching of English composition; it does this best through that attention to function which is required by the analysis of sentences. "Terms of art" should be sparingly employed, and never employed except to mark facts of a language of which a writer must take account. It is of consequence to retain such terms in English teaching as associate the vernacular with cognate languages taught in schools, provided the terms have an intelligible application to modern English. If terms are grounded upon convention only, then there is an advantage, and no real loss, on the whole, in adopting those conventions which are accepted with reference to other languages, rather than the conventions that are limited to the vernacular. In days when the teaching of language is menaced with curtailment or abolition, legitimate economy of labour is imperative upon all its friends.

A SUGGESTION ON HOMEWORK.

By P. SHAW JEFFREY.

THERE are two varieties of homework—apart from the natural division into good and bad—namely, the boarding school variety and the day school product, and these have many points of difference.

To begin with, in the larger boarding schools a great deal more time is available for preparation than in day schools, often as much as three hours or even longer, so that for this class of school about 50 per cent. of the entire working hours of the week are devoted to private work.

Under these circumstances it is possible and natural that every master should set homework on every lesson he gives and for this reason probably there is little or no organization, but every man's hand is against his fellow, and the greatest martinet among the transfigured band of teachers gets the best weight for his pound of flesh. It is inevitable that the pupils should sometimes suffer in the struggle, and it seems also inevitable that work done in preparation under such conditions should be accepted, as far as written work is concerned at any rate, when the level of neatness and carefulness is distinctly bad. It is hard to refuse badly written work from a

boy who tells you "I had such an awful lot to do for Mr. Black, sir, and such a tremendous lot of rep to learn for Mr. White, sir, that I *had* to do yours, sir, in a hurry, sir." The mischief is that the same excuse is valid and available not only for oneself but also for Black and White as well, and as a result all the boys' work becomes more or less inferior, though ferocious Mr. Black may get a better sample than pleasant Mr. White. I think that it is to this want of organization in preparation work that the slovenly writing of so many boys and men is due. There are even scholars of eminence who pride themselves on an illegible handwriting just as there are some who seem to prefer to be ill brushed and badly dressed, but surely this is inexcusable; it is often indeed a pose like anti-vaccination or a belief in ghosts, but it is a very unpicturesque one.

In day schools the scene is changed. The parent protrudes, and if a head master values his peace of mind he accommodates himself to the situation. It is here almost impossible to get more than two hours for homework, and most of us have to be content with an hour and a half. This means that the ratio of school work to homework is as 4 to 1, and it becomes urgently necessary to organize the distribution of work set for preparation. If this is carefully and efficiently done every master on the staff will be able to insist that all his written homework should be at least as carefully prepared as the work done during school hours, and in practice one discovers that it is usually rather better done, especially if parents are asked to initial all their boys' work, so that it has to be "passed" by the parent before it is shown to the master.

If initials are scrutinised it will be found almost invariably that the exceptionally good pieces of work are initialled by the father, and those weak or wanting by the mother, showing that women's rights are recognized by the Lower School.

From the foregoing remarks may be deduced the writer's opinion, founded on some considerable experience, that the general style and method of day school homework is considerably in advance of that done in most boarding schools, although the quantity of work prepared is less by about one half.

Now comes the question as to what form Homework should take, and here opinions range themselves into two opposing camps. There are those who maintain, and this is the tradition on which most men of middle age have been brought up, that the advantage of Homework is that boys are taught to think for themselves, that it is a great thing for them to have to hammer something out without a master always at their elbow, and other arguments to the same effect.

All this is true, no doubt, but the dull boy has to choose one of two things: he must either waste so much of his time during prep. in the hammering out process, if some particular lesson that other lessons come short and he suffers pains next day, or else he must take a line of much less resistance and get help, or, to put it cruelly, "crib." An intelligent cribber can escape detection for a long time if he will only put in his mistakes in consultation with his friends on the same staircase.

Such preparation as this is not only futile, but it weakens the moral sense, and the result is shown in the quite indulgent way in which the public, remembering the storms of its own youth, regards cribbing, the unspoken argument being that if masters expect too much they must not be surprised if they get swindled.

The other view of Homework is an entirely different one, and, in the writer's opinion, more sensible. Homework should be looked on not as a preparation for the next day's work, but as a résumé of the work of the day during which certain lessons have been prepared. It thus becomes the crowning achievement of each day as it passes, and each day's work, school and home work combined, forms a complete section of the week's work.

Even the most indulgent parent may be trusted to harden his heart as soon as he is convinced that every word of his son's homework has been properly explained to the class, and if his pride and hope has not understood the explanation it must be either inattention or want of brains. The young

hopeful's most promising excuse for slovenly homework vanishes into the circumambient air if his parent can no longer be brought to believe that "No one has ever taught me how it is done."

It seems on the face of it illogical that the Board of Education should insist, and rightly so, on supervising the time tables of inspected schools without making any inquiry as to the amount of time devoted to homework or the way in which preparation hours are parcelled out. Here is an opportunity for another memorandum, and the writer makes the authorities in Whitehall a present of this most respectful suggestion.

SLANG AND ARGOT.

By F. BAYFORD HARRISON.

IT is not very long since the French Academy debated with much earnestness the question of admitting the word "épatant," used as an adjective, into its Dictionary. Now, "épatant" is to flatten, as one's nose against the window, or to break off, as the foot of a wineglass; and "épatant" seems at first sight hardly to express a delightful sensation. But as a slang term it has become so generally acceptable that a place in the great Dictionary was finally accorded to it.

A language without slang would be very dull; indeed, such a language would no longer be a living one, but at least moribund. As a living brain is always acquiring new powers, so a living tongue is always acquiring fresh expressions. When growth ceases, decay begins. The French recognize this fact when they call slang "la langue verte," the green, the growing language. And, as much of the slang of Shakespeare's day has disappeared from English, replaced by what is modern—most modern, so the familiar talk of Paris current in the time of Molière is, much of it, out of date, and the *argot* of the twentieth century very much alive in the present-day Paris—or "Pautruche," if we wish to call that city by its slang name.

Comparative slang is a fascinating study; probably most of us would describe it as "ripping" in English and "épatant" in French. And those who do not care for it will say "It bores us," and that "Nous nous rasons" ("We shave ourselves"). But, no; the later phrase is "Nous nous barbons" ("we put on beards"). Sometimes *argot* very closely translates slang. "To send round the hat" is "casquer," from "casque" ("helmet," or "headgear"). "Assez! La bouche! La ferme!" means the same as our curt "Shut up!" And "Arry" is equivalent to "Jacques." When a French "Arry" gives himself airs of importance his countrymen say that "il fait son Jacques." A pleasant term for being in prison is "être à l'ombre" (to be "in the shade"); not unlike being "in quod," if "quod" be, as is supposed, just a contraction of the classical "quadrangle," a shady and quiet place. Naturally, crime and money, and the want of money, play a large part in the production of *argot* and slang. The pocket is in French called "la profonde"; and we speak of being "dipped" when the bottom dollar has been reached. The French "braise" is simply "brass" or "tin" considered as coin of the realm.

"En sortant de ma turne ['diggings'] je prends la boîte à canailles ['bus'], je donne trois ronds ['coppers'] et je demande une rallonge ['correspondance'] in the French omnibus system] pour aller chez ma tante ['my uncle']; arrivé là, je mets au clou ['up the spout'] ma toquante ['ticker']. On m'allonge trente balles [francs]; je mets la braise ['tin'] dans ma profonde [pocket], et je m'en retourne turbiner ['to work']. Garder ce laïus ['long yarn'] dans votre sorbonne ['noddle']." This "laïus" would be a fine thing to reel off to a Parisian *concierge*, and, no doubt, he would reply with one still longer and more slangy. One must then retort by calling him a "piplet." Now, "Piplet" is the name of a certain *concierge* in Eugène Sue's "Mystères de Paris," and may be applied to anyone of that calling, just as

Dickens turned every parish beadle into a "Bumble." The "piplet" will probably designate his pocket-handkerchief as a "tire-jus," which is comic, though coarse. Mr. Bumble might allude to his as "a wipe." The comic in French is generally more coarse than it is in English.

In every country the police are the objects of reverence and irreverence, especially to the boy in the street. As a body of men, they are called in Paris "La Rousse," though they are not redder, even when indignant, than other people. An informer is a "casserole," perhaps because he gets his victims into hot water. An actor is a "M'as-tu-vu?" which is a capital name for one who thinks that all the world ought to crowd to see him on the stage; and a still more appropriate nickname is that of a soldier employed on Commissariat Service. He is a "Riz-pain-sel," because rice, bread, and salt are the chief of his diet. For a similar reason, the French call an Englishman a "rosbif," in which matter, perhaps, our compatriots have the advantage. A "Polytechnique" boy is known as an "X," because mathematics form the greater part of his studies; and a St. Cyrien in his first year is a "carré" (square); in his second year he develops into a "cube." A quite young child may be called a "mome" (probably from "momie," a mummy), or a "lardon" (slice of bacon); or, if a boy, then a "gosse." These words seem equivalent to our "kid" and "nipper." When the children's elders talk a bit of scandal they are said to "casser du sucre." When they are weary of breaking sugar they begin to "se raser" or "se barber," as aforesaid; or if the "cancan" is spicy, they may exclaim, "Vlan! on dirait du veau!" which, after all, is not more absurd than our "Not so dusty!" and which brings to mind the now obsolete expression, "Quite the cheese!"

More serious things are veiled under gay externals. With us, to be hanged used to be softened into "turned off"; in Paris, the guillotine is "la veuve" (the widow); to be guillotined is "être raccourci" (shortened by a head). There are many slang words for death and dying; "casser la jupe" (tear your skirts); "tourner de l'œil" (turn up the eyes—or the toes); "lâcher la rampe" (let go the railings); "porter l'arme à gauche" (carry your gun on the left shoulder).

In Paris a landlord—everywhere an unpopular person—is known as "le vautour" (the vulture). The hand is "la pince"; "serrer la pince" is to shake hands. A chum is "une branche," "un frangin," "un poteau," which last is merely the French for a post, something on which you lean for support. The queer word, "s'esbigner," is to make yourself scarce, to cut and run. St. Fiacre now meets with little honour; the "auto" (taxi) is everywhere; and the fiacre has long been "un sapin," deal being the cheapest wood of which a "growler" could be made. A drunkard may be described as a "poivrot," one who eats pepper in order to provoke thirst, which he gratifies; and to be tipsy is to be "gris" (half way between drunk and sober), or "rond" (like Falstaff), or "voir double," a symptom of intoxication enshrined in Euripides and Virgil. A bald man has a "genou" (a knee on his head); or "un skating" (a skating rink in the place where the wool ought to grow). To fall asleep is "fermer les persiennes" (shut the shutters). To make a very low bow, such as the Frenchman only knows how to make, is "se casser l'échine" (to break one's backbone). The nose is "piff": whence "Piffard," Nosey; or "blair," a corruption of *flair*, scent found with the nose after the manner of a dog. To laugh noisily is "rigoler," and a funny chap is a "rigolot" or "rigolboche," "boche" being a form of *bouche*. And to amuse oneself in the style of 'Arry and 'Arriet is "chahuter." One's legs are either "guibolets" or "gambettes" (from the Italian *gamba*, a leg) or *le compas* (the compass).

With such lively *argot* at hand to replace our insular slang, we ought indeed, when we visit Paris, to strengthen the bond: of the *entente cordiale*, or at least to add to the gaiety of the French nation by our endeavours to be gay.

A MUCH discussed scheme for founding a University at Dresden has, by Ministerial decree, been vetoed; Leipzig accordingly is to remain the only University city in the Kingdom of Saxony.

"WIRELESS" FOR SCHOOLS.

SOME months ago—nearly a dozen of them—the subject of "wireless" was briefly discussed at a Masters' Conference, and the general opinion seemed to be that an installation at a school might be a valuable educational adjunct. So far as we can learn, however, very little has as yet come of the discussion, except that perhaps half-a-dozen schools now have an equipment. In most cases some keen boy has been responsible, rather than the staff, for setting up the instruments, but in one or two schools, notably at Repton, the matter has been taken in hand by the authorities. A note on the approximate expense, and results obtained, may be of interest to our readers, and we propose to take the installation at Repton as an example. The arrangement of external wires for "catching" the messages consists simply of two bare copper wires (No. 14 S.W.G.) suspended with insulated spreaders from a convenient flagpole (secured by suitable guy wires) at one end. This "aerial" stretches—a matter of some 200 feet—from the Science Block across the close to the corner of the new classrooms, where it is firmly attached by two hooks. Two "leading-in" wires fall at one end to the operating room on the ground floor, making it a "directional inverted L-type aerial." The erection of a pole may cost about £2, and the wire, guy ropes and insulators another £1 or thereabouts. The only apparatus bought at the outset was a receiving set, as the school has, of course, the customary large induction coil, which is used for sending. The receiving set consists of a large double-slide tuning coil (cost about 30s.), a "Bassano" crystal detector (10s. 6d.), mica condenser (5s.) and a pair of special wireless telephones (£3 3s.) supplied by Messrs. Markes & Co., of Para House, Derby, who also make the "Bassano" Detector. An "earthing switch" is also used for earthing the aerial when not in use. The apparatus and general equipment of a receiving station may be estimated at anything from £10 to £15, but an amateur would of course make everything for himself, except the 'phones, and the cost would then be nearer £5. He would probably use a flagpole on the house-top, and a tree or a 5s. scaffold pole to support the aerial. With the exception of the mast, the installation at Repton was erected by the Derby Wireless Club, and it was all completed on a Saturday afternoon.

Some extraordinary long distance results have been obtained on this aerial, and Repton boys can boast of a receiving range of over a thousand miles. Pola (in the Adriatic Sea) and Marseilles are very loud. Madrid is also good, notwithstanding his "staccato" note. Oran and Bizerta, on the coast of Algiers, and Soller, in the Balearic Isles, are occasionally to be heard. The variety of notes is very strange. Paris has a powerful deep bass voice, while the German Telefunken stations and Bergen sound like a penny whistle. The Lizard has a pretty musical note, and another English station quacks like a drake. A German Liner, equipped with a Lepel set, coos like a dove, and another station uses a rotary spark gap, so that as the little disc gains speed the note soars up in pitch. The interest aroused among the boys is naturally immense, and Mr. Brunskill, the science master, has found it necessary to impose a limit on the number of boys who have access to the apparatus. The educational value of wireless must be of considerable value. To become a successful amateur one must know all about Condensers and Microfarads, Inductances and Microhenries, or their corresponding C.G.S. units. Some elementary algebra is involved in the calculation, and a certain non-mathematical classical scholar has been known to teach himself "logs" to aid his wireless researches.

An enthusiasm for wireless makes a great difference to what might otherwise be a dull and lifeless study of elementary electricity. It straightway galvanizes electrostatics and electromagnetics into something practical and interesting. The boy who takes the trouble to think things out can readily wind a certain length of "No. 22 d.c.c." wire around a piece of cardboard tube, and he is at once able to pick up "600 metre wavelengths" and to hear messages from liners to Ushant, or

it may be to Liverpool or Scheveningen. He can perhaps get 7,000 metres, and hear Clifden sending business messages across the broad Atlantic. A "Bassano" detector—for which no battery is needed—a "Markes" 'phone, a condenser and tuning coil of the appropriate dimensions, and one can use one's bedstead for an "aerial" and hear the latest "press" and "time signals" from six hundred miles away!

"Q. R. S."

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

It is an age of rebellion. In Rhode Island a group of children waited on their teacher and required her to open school with the Lord's Prayer. It may be that she doubted whether their action was spontaneous; at any rate, she refused. Upon this, the children marched forth, as the plebeians of old to the Mons Sacer, into the neighbouring woods, and encamped there. The Principal, the Superintendent, and the Board of Education, acting in concert, succeeded in getting them back some days later. What means were employed we cannot say; we know what the Pilgrim Fathers would have used.

In the absence of any forward movement in respect of Continuation in England, the American Co-operative system is worthy of attention. Prof. Schneider, of the University of Columbia, several years ago devised a scheme under which young men might work in the workshop and attend school alternately. The *Educational Review* (XLVI, 5) publishes, under the rubric "A Co-operative Industrial Course," an account of the experience of Fitchburg, Massachusetts. There a combination of shop and school course has been adopted, manufacturers giving the use of their workshops for the practical instruction of apprentices, the School Authorities providing the necessary collateral teaching. The equipment of the workshops is better than any school plant could be. The course is of four years' duration, and the boys are 14-18 years of age. The first year is spent wholly in school; in the next three years the boys are occupied alternate weeks in school and workshop. Manufacturers take the boys in pairs, so that they have one of the pair always at work, whilst the other is at school. Every Saturday morning the boy who has been at school during the week goes to the workshop and acquaints himself with what his comrade has been doing, in order that he may carry on the work without a break. To show the nature of the course, we give the scheme for the fourth year:

SCHOOL AND SHOP WORK.		Hours a week.
English	...	5
Shop Mathematics	...	5
Economics (one half-year)	...	5
Mechanism of Machines and Jig-Design (one half-year)	...	5
Physics, Electricity, and Heat	...	4
Chemistry	...	6
Freehand and Mechanical Drawing	...	4

During the last three years the boys receive pay—they can earn 165 dollars in the first year, 181 dollars in the second, and 206 dollars in the third—and are thus encouraged to remain at school.

A Report of the Executive Committee of the Association of American Universities exhibits the efforts that are being made to "standardize" American Universities and colleges. The associated Universities are twenty-two in number, and a list of them may be useful:—Catholic University of America, Clark University, Columbia, Cornell, Harvard, Indiana, Johns Hopkins, Leland Stanford Jr., Princeton, State University of Iowa, the Universities of California, Chicago, Illinois, Kansas, Michigan, Minnesota, Missouri, Nebraska, Pennsylvania, Virginia and Wisconsin, and Yale University. Berlin and other Prussian Universities recognize every Bachelor's degree acquired at one of these associated Universities as an equivalent for the German *Maturitätszeugnis* (School Leaving Certificate). Moreover, if the period of study prior to the attainment of the Bachelor's degree has covered four years, the Berlin Faculty of Philosophy will ordinarily recommend the credit of one of these years to the triennium required for graduation in Germany. The Executive Committee suggests that there should be included in a list of American institutions whose Bachelor's degrees should be accepted by foreign Universities, first, the members present and future of the Association of American Universities; secondly, those other institutions on the accepted list of

the Carnegie Foundation for the Advancement of Teaching about whose claims to recognitions there can be no question; thirdly, those institutions which are not included in the accepted list of the Carnegie Foundation because they are in some sense sectarian, but which otherwise conform to its standards of acceptability. Such a list has readily been furnished by the Carnegie Foundation. If this recommendation were adopted, there would be in all 118 recognized Universities and colleges in the United States, their Bachelor degrees (A.B., B.Sc., &c.) being equivalent to the *Maturitätszeugnis* conferred by a German higher school. It will, of course, be understood that the great American Universities carry on the work of a University proper from this foundation.

The Americans are not unwilling to connect national defence with higher education. A military camp for students will be established in the grounds of the University of Vermont next summer. It will be one of

four organized by the Government in various parts of the United States as the outcome of an experiment at Gettysburg, Pennsylvania, last year. About a thousand New England students and pupils of secondary schools in which military instruction is given are expected to attend. A regular officer of the army will be in command. The students will pay for their own board; but the Government is to provide the camp equipment. The libraries and the summer schools of the University of Vermont will be open to the young soldiers—enabled thus, as Miss Pinkerton might have said, to worship Mars and Minerva at once.

GERMANY.

On December 22, 1913, two Royal Ordinances were issued for Bavaria by which school attendance is regulated and Continuation in Bavaria. Continuation organized uniformly. In Bavaria the obligation to attend school lasts ten years, seven years being assigned to the Volksschule and three to the "Sunday school." Germany has not the same reluctance to impart secular instruction on Sunday as has England; and the Bavarian "Sunday school" formerly taught German, arithmetic, geography, &c., one hour every Sunday afternoon to fix the knowledge got in the Volksschule. Then the hours of instruction in the "Sunday school" were raised to a minimum of eighty in the year; moreover, its pupils had to be present at a religious lesson (*Christenlehre*), taking the form of a service in church. But in many places the community substituted an industrial continuation school (*gewerbliche Fortbildungsschule*) for the "Sunday school." By the new regulations the "Sunday school" is abolished everywhere, and in its stead there is created a national continuation school (*Volkshochschule*), which, in principle, does its work on week-days and gives instruction for a hundred and forty hours in the school year; that is to say, the holiday weeks being deducted, for three or four hours a week. Only exceptionally, where local conditions require it, may teaching be done on Sunday. This national continuation school forms part of the primary-school system.

Of a different nature is the vocational continuation school (*Berufshochschule*). It treats its pupils with special reference to their vocational needs, and by attending it the young Bavarian is relieved from the obligation to go to the national continuation school. Any local community may establish such a school and make attendance compulsory; private firms (manufacturers, &c.) are also empowered to found vocational continuation schools. The number of hours of instruction in the year must be at least 240. These schools will not be organically joined with the Volksschule, but will have special Inspectors, appointed by the Government. In both the national and the vocational continuation schools religious instruction is to be given. The end that Bavaria has in view is *die Schüler zu religiös und vaterländisch gesinnten, körperlich, sittlich und beruflich tüchtigen Menschen heranzubilden*: to make of its children men religiously minded, patriotic in spirit, strong in body, morally clean, and efficient in pursuit of their callings.

RUSSIA.

It is not in Germany only that schoolboys end their lives with suicide. The evil exists and grows in Russia also. Dr. Gordon, of Moscow, has kept a list of all the cases of suicide among schoolboys that have come to his knowledge since the year 1902. According to an address that he delivered before the Pedagogic Society of Moscow, the number of cases has been increasing deplorably. In 1902 only 18 were known; in 1909 there were 482. During the tumultuous days of the Revolution the figures rose by leaps and bounds. More than half the cases are among pupils of the secondary schools. Living healthy lives, our English boys do not commit suicide; in

Prussia 124 in a million do so, and in Russia 567 in a million! The Russians blame the school, and schoolmen look outside of it for the root of the evil. Among the students in Russia also self-murder prevails, the general cause being dire poverty.

NEW ZEALAND.

The Education Report just received, and dealing with the year ended December 31, 1912, is bright as the land from which it comes. It shows, as to primary education, that the number of public schools open rose in the year by 48, the increase being chiefly in rural schools with only one or two teachers. The average weekly roll of primary schools was 181,144 in 1912, as against 178,091 in 1911. The percentage of attendance to roll was much higher than in any of the Australian States, and almost the same as in England. We observe with satisfaction that 14.5 per cent. of the children were over thirteen years of age, although the number of very young children in the schools increases. Children who have to reach school by railway are conveyed in New Zealand free of charge. A new scheme of physical education has been substituted for what was called the "Junior Cadet" training, and a Director of Physical Education has been appointed. During the year 1912 the medical inspection of schools and school children was brought into force, and will yield beneficent results. What of the teachers? The proportion of women to men grows larger; but the scarcity of men teachers is not so striking in New Zealand as in some other countries. In the primary schools, those with an attendance of under sixteen excluded, the average salary of a man teacher was £205; that of a woman, £124. (In secondary schools £275 for a man, £178 for a woman teacher.) We quote a sentence from the Report for the sake of its suggestiveness: "The additional monetary inducements offered in recent years to teachers in New Zealand schools has checked the outflow of competent teachers to more lucrative spheres of employment, and has proved a stimulus to the younger teachers to improve their status as quickly as possible."

Maori children were taught in 108 village schools, whilst many attended the ordinary public schools; moreover, there were 8 boarding schools to give secondary education to Maoris. The average attendance in the village schools was 4,090—a hundred more than in the preceding year. All the secondary native schools make provision for vocational training in some form or another. Woodwork is popular, and the school furniture of the new Hukaree Girls' School was made by the boys at Te Aute. Native parents show interest in education and an increasing sense of its value. It is pleasant to record that the Tuhoe Maoris, through their Chief, Numia Kereru, of Ruatoki, recently transferred to the Crown a block of land containing 1,000 acres as a reserve for secondary native-school purposes.

CHOSEN (KOREA).

The treatment of Korea by Japan, as shown in the Annual Report of the Government-General, is such as to justify her presence in the land. As to the Korean dynasty, "their Highnesses Prince Li Junior and Prince Li Senior, being set free from political responsibilities or troubles, are now enjoying a happier and safer life, while the Heir Presumptive, receiving a good education in Tokyo under the gracious care of the Japanese Imperial Household, entered the Central Preparatory School of the Military Academy in 1911, after several years' study in the Peers' School." A reforming hand has been at work upon administration and society. Court ceremonies have been curtailed; the nobility are encouraged to manage their estates and to refrain from extortion; and a general feeling of brotherhood between the Japanese and the Koreans is fostered. But the Japanese are the elder brothers, and the national language is now the Japanese. The Government is not indifferent to culture. From an Imperial Fund 134 public common schools had been established by the end of 1911, while subsidies were granted to 333 private schools. An old society has been reorganized as the Kyōng-hak won, or Classical Literary Association, to supply *literati* of ability as lecturers, and to keep alive the traditional ethical teaching.

When the Japanese undertook to deal with education in Korea they decided to apply the principles of the Imperial Rescript on Education, issued for Japan proper twenty-one years before. Of these principles the unifying purpose is to cultivate the moral character and to develop a national spirit. The base of the machinery for applying them is the common school, children admitted to which must be not less than eight years of age, and they attend it for four or three

years, according to local conditions. Compulsory subjects are Japanese, the native Korean language, Chinese literature and arithmetic; physical science, drawing, singing, handicraft, elementary agriculture, and commercial subjects are taught or dispensed with, as need is. Above the common school are a Special School, Higher Common Schools, and Girls' Higher Common Schools. The Higher Common Schools give a liberal education to boys not younger than twelve years of age, graduation from one of these schools requiring at least four years. Foremost among the subjects of instruction are put: ethics, Japanese, and Korean and Chinese literature. A Girls' Higher Common School—the age of admission is twelve, and the period of study three years—is a school founded with the object of fostering in girls "feminine virtues and instructing them in the knowledge and art useful in making a livelihood, especially cultivating their moral character and equipping them as good housekeepers." Sewing, handicraft, and housekeeping receive due attention in such a school. The Special School is in Keijō. Students of it, who must be full eighteen years at entrance, are trained, in a three years' course, for the State service or for the higher professions.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but "The Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

A Special Meeting of the Council was held at 74 Gower Street, W.C., on November 3, 1913. Present: Miss H. Busk (in the chair), Miss M. Cocking, Mr. G. F. Daniell, Miss H. E. Downs, Miss F. Edwards, Miss B. Foxley, Mr. H. Holman, Miss M. R. N. Holmer, Mr. T. L. Humberstone, Miss E. Newton, Mr. J. Oliphant, Miss K. Stevens, Mr. W. Trevor Walsh, Mr. W. H. Winch, Mr. J. S. Wise.

The Chairman made a statement that the Organizing Committee had appointed a Sub-Committee to consider what action ought to be taken in view of the fact that the lease of 74 Gower Street terminates in March, 1915; that this Sub-Committee had met and reported to the Organizing Committee, and this to the Executive Committee, and that each Committee had referred the Report to the Council without comment. That the Report as before the Council made suggestions only on broad lines, entering into no details, and that it was for the Council to determine the lines upon which action should be taken.

The Chairman then asked for permission to bring up a Resolution passed by the Political Committee, as a matter of urgency.

It was proposed by Mr. Holman, and seconded by Mr. Daniell, and carried, that the Resolution be adopted, with the substitution of the word "where" for "if" as follows: "That Grants from Government to secondary schools should be conditional on the raising where necessary of the scale of salaries and the number of the Staff to what shall in its opinion be adequate."

The Report of the Executive Committee upon the future of the Guild was then considered.

After considerable discussion, in which Miss Downs, Mr. Humberstone, Mr. Holman, and Mr. Daniell took part, it was finally proposed by Mr. Daniell, and duly seconded and carried, that "The Sub-Committee of the Organizing Committee be made a Committee of the Council." "That the five members of the Committee be re-elected." "That Miss Foxley and Mr. Oliphant be asked to join the Committee." This they consented to do.

A Special Meeting of the Council was held at 74 Gower Street, W.C., on December 4, 1913. Present: Miss H. Busk (in the chair), Miss M. Cocking, Mr. G. F. Daniell, Miss H. E. Downs, Miss B. Foxley, Prof. J. A. Green, Miss S. Green, Mr. T. L. Humberstone, Miss H. A. Martin, Miss E. Newton, Mr. J. Oliphant, Mr. E. Sharwood Smith, Mr. P. Wardale, Mrs. J. White, Mr. W. H. Winch.

The minutes of the Special Meeting on November 3, 1913, were read and confirmed.

The Council considered, on December 4, 1913, the Report of the Special Committee appointed to consider the housing and development of the Guild, and adopted it amended as follows:—

"The Council, at their Special Meeting on November 3, 1913, approved of the recommendation of the Special Committee regarding the development of the Guild on the lines of a learned Society, and the Council, at their Special Meeting of December 4, 1913, recommend that the present work of the Guild be carried on as now, but that there shall be a distinct new departure in the direction of serious and systematic study of the problems of education."

"The organization shall provide definite opportunities for the discussion of educational questions (administrative, historical, psychological, sociological, and medical as well as pedagogical), and regular meetings shall be held for the reception and discussion of papers and for promoting investigations."

"The papers and results will be published as transactions, and may eventually be embodied in a periodical distributed free to members and sold to the public."

"The object of this development will be to focus enlightened public opinion upon the larger educational questions, and the Council consider that no existing body is better qualified for this work than the Teachers' Guild, because its membership is not restricted to those directly engaged in teaching, and it would be essential to induce administrators, members of Education Authorities and others in touch with education at various points, to become members and to join in these meetings and contribute papers."

The remainder, dealing with the question of accommodation, club, &c., was deferred for further consideration at a later date.

A Meeting of the Council was held at 74 Gower Street, W.C., on December 12, 1913. Present: Miss H. Busk (in the chair,

the President being absent), Miss M. Cocking, Miss H. E. Downs, Miss S. Green, Miss H. A. Martin, Mrs. J. White.

The minutes of the last meeting were read and confirmed.

The minutes of the special meetings of the Council of November 3 and December 4 were taken as read, and confirmed.

The pamphlet regarding the Conference of Teachers of English at Stratford-on-Avon to be distributed with the next issue of the *Quarterly*.

Delegates to P.N.E.U. Conference at Darlington were appointed: Mrs. Henry, Collegiate Hall, Sheffield; Miss J. Cannon, St. Augustine's, Darlington.

The Report of the "Half-Time" Joint Committee was received.

The resolutions of the Association of Head Masters of Secondary Schools in the Midlands on "Appeal" were received, and referred to the Education and Library Committee for consideration and report.

Comments from Education Authorities and Chambers of Commerce on the resolutions of the Council on Continued Education were read.

The Report of the Hon. Treasurer, being the Audited Statement of Accounts for the twelve months ending September 30, 1913, was received and adopted.

It was agreed that the decision of the Council to print the papers to be read at the Conference in slip form and distribute them before the meetings be re-affirmed.

Miss Green promised to report the meeting on Rural Education for the Conference Report.

The advisability of some mention of possible future developments of the Guild being mentioned at the Annual General Meeting was discussed. It was decided that such an announcement would be premature, but, it was proposed by Miss Foxley and seconded by Miss Green, and carried, that "some mention might be made of the proposal to form a Club open to persons interested in Education."

The Report of the Executive Committee was received.

Organizing.—Agreed to delete "s" in Report in the word "Centres," and add the name of Miss Johnson as Hon. Secretary *pro tem*. of the Cambridge Centre.

Political Committee.—It was agreed to alter Resolution 1 on the Constitution of Education Committees to conform with the Chairman's opinion, send it to him for approval, and if adopted by him to insert it in the Report.

1. *Constitution of Education Committees*.—The Council accept Mr. Pease's statement that the Government is irrevocably committed to the municipal basis in education, and does not propose any substantial alteration of the Local Education areas; but regrets that no proposals have been put forward for some modification of the constitution and powers of Local Education Committees in the direction of securing the co-operation in local educational administration of a larger number of persons specially interested in, and qualified for, the work. Under such conditions, the Education Authority might well be given increased powers, subject to municipal control over the gross expenditure on education.

The Council further consider that means should be found for ensuring that in future women should take a larger share in local educational administration than is the case under existing conditions.

2. *Elementary Education in Rural Districts*.—The Council regret that Mr. Pease's proposals with respect to elementary education are stated in vague terms. Many important developments are required in elementary education, particularly in rural areas, which ought in future to supply a larger proportion of well educated pupils for the Secondary Schools and Universities and for the teaching profession. The Council are not satisfied with Mr. Pease's statement that, while voluntary schools will continue to be recognized as an integral part of the educational system, the Government will "modify existing arrangements." In their opinion, the Government should deal with the single-school area question in rural districts on bold educational lines. Local Education Authorities should be given greater powers over the appointment, transfer, and dismissal of teachers in all schools, if they are to be held responsible for the efficiency of elementary education in their areas. Both on grounds of economy and educational efficiency, large powers should be given to group schools and to transfer children to the schools best suited to their educational needs.

3. *Secondary Education*.—The Council welcome the proposals of the Government to define more precisely the obligation of Local Authorities in respect of secondary education, to give increased rating powers, and to extend generally the organization of secondary schools. Whether by legislative or administrative order,

the Board of Education should be empowered to register efficient secondary schools after proper inspection. Increased aid from the Central Authority to secondary schools should be contingent on the establishment of adequate scales of salaries for teachers.

Modern Language Holiday Course Committee.—The report was received and adopted, with a proviso that, if a course in English at Lübeck were decided upon, the consent of the Council should be obtained.

Thrift and Benefits Committee Report was received and adopted.

"Holiday Resorts" Committee Report was received and adopted.

The Annual Report, with the alterations passed by the Council, was approved.

The next meeting was fixed for Saturday, January 10, 1914, at 2.30 p.m.

At the close of the meeting the minute of the Special Meeting of the Council of December 4, 1913, dealing with the future development of the Guild, was discussed, and the Vice-Chairman of the Council agreed to draft a report of the conclusions arrived at, circulate it among the members of Council present, and bring it up at the next meeting on January 10, 1914.

A meeting of the Council was held at 74 Gower Street, W.C., on January 10, 1914. Present: Rev. Canon J. B. Masterman, President (in the Chair), Miss H. Busk, Mr. J. Brough, Miss M. Cocking, Mr. G. F. Daniell, Rev. H. V. Dawes, Miss H. E. Downs, Mr. G. P. Dymond, Miss S. Green, Miss H. A. Martin, Mr. H. A. Nesbitt, Miss K. Stevens, Mrs. J. White.

It was proposed by the President, and seconded by Mr. Dawes, and carried unanimously, "That Miss Busk be elected Vice-Chairman for the coming year."

It was proposed by Miss Busk, and seconded by Mrs. White and carried unanimously, that Mr. G. F. Daniell be elected Deputy-Chairman for the coming year.

It was proposed by Mr. Dawes, and seconded by Miss Green and carried, that Miss Downes and Prof. Green be asked to serve on the Executive Committee in the place of Mr. Charles and Canon Dennis (resigned), and that the remainder of the Committee be re-elected.

It was agreed to re-elect the Political Committee; to re-elect the Education and Library Committee, adding Dr. Brough, Miss Dale, Mr. N. Hodgson; to re-elect the Finance Committee, adding Mr. Oliphant; to re-elect the Organizing Committee, omitting Miss Dale and adding Mr. Humberstone; to re-elect the Modern Languages Holiday Courses Committee, the Thrift and Benefits Committee, the Legal and Professional Advice Committee, the "Holiday Resorts" Committee, the Psychological Research Committee, adding Dr. Brough and the Rev. H. V. Dawes.

It was proposed by Mr. Dawes, and duly seconded and carried, that the Psychological Research Committee be asked to co-opt members to the Committee as far as possible from members of the Guild.

The Political Committee was instructed to carry on their work regarding Pensions, to watch legislation proposals, and to consider the Education Bill as soon as published.

The Education and Library Committee was instructed to consider the questions of After-Care Committees, Junior Labour Exchanges, and how to get into touch with employers of labour.

The question of the future of the Guild was discussed. It was proposed by Mr. Dawes, and duly seconded and carried, that the Executive Committee should deal with the whole question, formulate a definite scheme, and draft a preliminary prospectus.

The dates of the meetings of Council were fixed for January 29, and the first Friday in March, June, and November, at 4.30 p.m.

The dates of the Executive Committee were fixed for January 22, and then the third Thursday in each month.

The Report of the General Secretary was received.

It was proposed by Mr. Nesbitt, and duly seconded and carried, that the seventeen applicants for membership be duly elected—namely, London, 16; Manchester, 1.

It was proposed by Miss Green, and duly seconded and carried, that a vote of thanks be accorded to the Hon. Treasurer (Miss H. Busk) and the Conference Secretary (F. Fairman) for the work done in connexion with the 1914 Conference of Educational Associations.

A meeting of the Council was held at 74 Gower Street, W.C., on January 29, 1914. Present: The President, Canon J. H. B. Masterman (in the Chair), Dr. J. Brough, Miss H. Busk, Mr. R. F. Charles, Miss M. Cocking, Mr. G. F. Daniell, Miss H. E. Downs, Miss S. Green, Mr. N. Hodgson, Mr. J. L. Holland, Miss M. R. N. Holmer, Mr. P. B. Ingham, Mr. J. Oliphant, Mr. F. Storr, Mr. J. A. Turner, Mrs. J. White, Mr. W. H. Winch, Mr. J. S. Wise.

Arising from the minutes, Mr. Winch stated that he thought it would not be advisable to make a hard-and-fast rule that no one other than members of the Teachers' Guild should be co-opted to the Psychological Research Committee. He hoped the Council would grant the same latitude in this respect as the Committee had in the past. The President stated that it was a counsel of perfection that only Teachers' Guild members should be co-opted.

It was proposed by Miss Busk, and seconded by Miss Cocking, and carried, that the four applicants for membership be duly elected—viz. Brighton, 1; London, 3.

Letters of resignation were received from Mr. Holman and Mr. Nesbitt.

It was proposed by Miss Busk, and seconded by Miss Green and carried, that a letter of regret be sent to Mr. Nesbitt, thanking him for his services to the Council and Committees.

It was proposed by Miss Busk, and duly seconded and carried, that Mr. Charles be asked to remain on the Executive Committee.

The Report of the Hon. Treasurer was received.

It was proposed by Mr. Oliphant, and seconded by Mr. Storr and agreed, to confirm the minute of the Executive Committee regarding the taking part in the proposed Educational Conference at Letchworth in July, 1914, co-operating with the Letchworth 1914 Celebration Committee and the Workers' Educational Association.

It was proposed by Mr. Oliphant, seconded by Mr. Daniell and carried, that a Special Committee of five, in addition to the Officers, be appointed to arrange a Conference at an early date for the purpose of forming a Society of Education, with power to act.

The following were nominated to serve on the Special Committee: Mr. Storr, Mr. Holland, Miss Downs, Mrs. White, and Mr. Walsh. The name, purpose, and membership as proposed in the scheme to stand, the remainder being suggestions only.

It was agreed that the day of the Conference should be a Saturday, in the afternoon.

The Council then instructed the Organizing Committee to report on the possibilities of finding suitable accommodation for the Teachers' Guild.

The date of meeting of the Special Committee was fixed for Wednesday, February 4, at 4.30 p.m.

SOCIETY OF EDUCATION.

For some months the Council of the Teachers' Guild has been considering the future of the Guild, with a view to developing its activity. The success that has attended the January Conferences arranged by the Guild, and the fact that the Guild is shortly to vacate its present premises in Gower Street, suggest that the time has come for the consideration of future policy. As the outcome of much deliberation, the Council has decided to propose the formation of a Society of Education, to take over part of the work that has hitherto been included in the scope of the Guild's efforts. It is thought that it will be easier to secure the co-operation of existing educational organizations if a new society is established, in which teachers, educational administrators, and all who are interested in education, can meet on equal terms for the study of the more fundamental problems of education. It is suggested that any existing educational organization shall be able to affiliate, but the terms of affiliation have still to be settled. To consider this, and to hear more of the scheme in general, the Teachers' Guild has invited the various educational organizations in London to send representatives to a meeting on March 7, when a full opportunity will be given for discussing the arrangements of the proposed Society. In the case of any societies that cannot choose their representatives before the date of this meeting, the Guild has invited the President and Secretary to attend, on the understanding that by doing so they do not commit their Society.

Some of those who have already been consulted in regard to these proposals have not been disposed to regard with favour the addition of another to the already existing number of Educational organizations. The Council of the Teachers' Guild believes that such a "clearing-house" of Educational ideas as is contemplated in this Society of Education might gradually be found to afford a common meeting ground for educational students, and so obviate the need for the multiplication of organizations of a more sectional character. The great weakness of educational opinion in England is that it has no voice to speak for it. A society that has no sectional interests, either religious, political or economic, to serve, but is solely interested in education for its own sake, might exercise a powerful influence over the development of National Education. Feeling confident that such a society is needed, the Council of the Teachers' Guild is making this effort to establish it.

It is not intended that this new society should in any way interfere with the present work of the Guild, which will, it is hoped,

develop considerably, particularly on its social side. In finding fresh premises, the Council has in view the need for a club for teachers in a central position, with facilities for residence. In the opinion of the Council, the formation of the new Registration Council will make the work of the Guild in bringing together teachers of all kinds more important than ever.

A meeting of the London Centre of the Teachers' Guild, at which Sir Robert Blair will preside, will be held in University Hall, Gordon Square, at 8 o'clock on Wednesday, March 18. Mr. Shadrach Hicks, Principal of Shoreditch Technical Institute, and Miss Helen Smith, B.A., Lady Superintendent of the Women's Classes at the Borough Polytechnic Institute, will give addresses on "Trade Schools." Tickets (price 6d.) for friends of members can be obtained by application to the Honorary Secretary at 74 Gower Street.

OBITUARY.

THE LADY OF ST. ABBS.

A WORKER gifted with unusual strength of purpose has just passed away in the person of Miss Jane Hay, a Scotswoman, of St. Abbs Haven, Berwickshire, who died suddenly in the South of France just after we had gone to press last month. Miss Hay will be permanently remembered for her effort to improve the standing and surroundings of the fisherfolk, and notably the children of the community, at St. Abbs and neighbourhood, where a striking personality served to strengthen the influence. "The Boys and Girls' Rocket Brigade" she brought into being was not only remarkable but unique in its way, for it secured training in life-saving by aid of drill and miniature apparatus that reproduced the system adopted at all British ports. Her school for diving she established, the first of its kind, was recognized as qualifying for certificates under the Secondary Education Committee of the county, and she was the first, and for some years, the only woman secretary of a life-boat station. As member at various times of public bodies (the Edinburgh School Board and Parish Council, the Collingham School Board, the Berwickshire Insurance Committee, and others) she brought in valuable experience to bear on questions touching the welfare of the children she loved so well, both *en masse* and individually; and her advice was sought far and near.

But the activities of so large a nature were not limited to her own country. Miss Hay helped to administer a relief fund after the Greco-Turkish War in 1897, and also, some fifty years ago, to organize a relief centre in a famine-stricken district of Russia; and she had a part too in founding the Scottish-American Mutual Assurance Society. In the home circle at the Haven, Miss Hay enjoyed untiring opportunities of gratifying, directly and indirectly, her taste for art and letters. All personal pleasures were, however, but in the service of a life deliberately dedicated, from its early years, to the children of the children in her own country and chiefly the children of her own countryside.

UNIVERSITIES AND SCHOOLS.

LONDON.

The Joint Committee for the Promotion of the Higher Education of the Working People have published a report on their work for the first four years, 1909-1913. Instructed by the Workers' Educational Association, this new movement approaches the problem of working-class education not perhaps with different ideals from those of the founders of the University Extension movement, but with a new driving force, coming from the workers themselves. It would be unfair to suggest that the older movement has worked itself out, but to a large extent it has transferred itself to the middle classes. It tends to develop a type of culture which makes but a limited appeal to the working man. The work of the Joint Committee in London, under the chairmanship of Sir Henry Miers, appears to have been prosecuted with energy and success. Thus the number of classes, each composed of some thirty students, has increased from five in 1909-10 to thirty in 1913-14. Students pledge themselves to continue study for three years and to produce paper work, which, it is stated, is often of the best order. The tutors are University men of good academic attainments, and are carefully selected with a view to their establishing sympathetic relations

with their students. We gather from the report (with which a banker's order is enclosed) that the difficulties are mainly financial.

A class costs about £80 to carry on for a year. The funds are provided by grants from the Board of Education, the Local Education Authorities, the University, and other sources. In 1913-14 the total cost amounted to £2,278, of which nearly £300 appears as deficit. From the statistics quoted there appears to be some danger that the fate of the University Extension Movement may overtake the new movement, for 156 out of 635 students are described as "clerks," the next largest category being forty engaged in the building trade, thirty-six printers, thirty teachers, twenty-five shop assistants, twenty-one housekeepers, and seventeen engineers. Economics, history, and political science are the most popular subjects. One characteristic feature of the movement is that no diplomas or other rewards are sought for or granted.

The M.A. Degree is now open to Internal Students under regulations approved by the Senate.

An offer has been accepted from Mrs. Keddey Ray Fletcher to transfer to the University, as a memorial to her late husband, Dr. Keddey Ray Fletcher, and to his sister, Mrs. George Warr, the property known as "Goldings," at Loughton, Essex, for the endowment of one or more post-graduate students, not confined to London graduates.

Regulations have been approved for the award of the Sir John William Lubbock Prize in Mathematics. A bequest of £1,000 was given to the University by Lord Avebury for the purpose.

Dutch has been approved as a subject for the Intermediate Examination in Arts, and Celtic for the B.A. Honours Degree for External Students. Irish has become a subject of the B.A. Pass Examination for External Students.

OXFORD.

The Responsions Statute is going slowly through Congregation.

Responsions Statute.

Proposals to lower the number of necessary subjects were resisted, the Principal of Brasenose making a weighty plea that English Composition should be retained as a compulsory subject. On the other hand Mr. Snow's proposal to make Greek Composition an alternative to translation was carried, as was the proposal to make Algebra and Geometry alternative as they are now. Compulsory Latin Prose was saved by one vote. Mr. Snow's sporting proposals that dictionaries and grammars should be supplied met with little support. On March 3 a crop of "twelve-member" amendments come up for consideration. The most interesting is the Master of Balliol's proposal that the principle of compensation between subjects should be admitted. If it is carried, the objections to compulsory Greek and to Latin Prose will be slightly diminished. The principle is already, we believe, recognized to some extent in the Certificate Examination, but hardly, if at all, in Responsions. Another amendment proposes to remedy an objection that the statute takes the control of the Examination out of the hands of the University by providing that Examiners shall be appointed from and by Congregation.

The Statute for the Reform of Council has passed Congregation by a narrow majority, in spite of the protests of the Professors. Its supporters made much of the new system of transferable voting, by which any

Hebdomadal Council.

class of persons should be sure to secure representation. The difficulty of such proposals is that academic democracy, with its absence of strong parties and its personal relations, is a curious and wonderful thing, whose workings are very hard to predict. It would be a valuable study in political science if someone would examine thoroughly into its working in Oxford and Cambridge. We are constantly being treated in Congregation with disquisitions on democracy based on political experience, which have little application to our peculiar conditions.

The Committee for Anthropology has presented its annual report, which shows a remarkable growth in the study of the subject. There have been this year forty-one

Anthropology.

students in the School, of whom twenty are Government officers or probationers. The Committee state that they have submitted to Council a memorandum on the desirability of raising the subject, which is now studied in a Diploma course, to a full subject in the Final Honour School of Natural Science. The school has certainly deserved promotion, but it will need financial endowment beyond the present means of the University if it is to be sufficiently endowed. It is a scandal, for example, that we have no professor. A great deal of the success of the school is due to the indefatigable energy of Dr. Marett, the Reader in Anthropology.

The Finance Board has published, through the Hebdomadal Council, a most interesting series of returns, showing the revenue and expenditure of the colleges, and their contributions to the University. The net revenue of the colleges vary from £30,000 to £2,480. Six colleges, Queen's, New College, All Souls, Magdalen, Christ Church, and St. John's have a net revenue of over £17,000, ten of under £8,000. Most noticeable is the considerable amount given by colleges to University purposes over and above their statutory obligations, £6,066 in all. It is a great gain at last to have some reliable figures on a subject which is always being discussed, but seldom with knowledge.

We have all received our forms from the Registration Council, but it is hard yet to say how many tutors are likely to register. There seems to be a fairly widespread feeling that University teachers should take their place in the organization of the teaching profession, but a good deal of wondering as to what will come of it.

The Magazine last week raised a very important question in an article complaining of the very inadequate stipends of the science demonstrators in the University.

Demonstrators.

Science has grown up so much outside the college system that little is known of the organization of the scientific departments, and the ordinary tutor, secure in his fellowship and his salary from the tuition fund, learns with a shock that most science lecturers and demonstrators get salaries of between £100 and £200 a year.

We are all enjoying the "Acharnians." Memories of the play did not promise very much, but the result is delightful, thanks to Mr. Bailey's work as producer, Mr. Llewelyn Jones's excellent Dikaiopolis, and, above all, Sir Hubert Parry's rollicking, humorous music.

CHERWELL HALL.—Nine students entered for the examination for the Cambridge Teachers' Certificate in December last, all of whom passed, two being placed in the First Class, five in the Second Class, and two in the Third Class. One student obtained Distinction in the History of Education. Miss Halstead obtained the Geography Diploma of the University of Oxford.

CAMBRIDGE.

We have really had very little history this past month—though lectures innumerable from our own members and from visitors. Notable among the visitors have been Prof. D. S. Cairns, of Aberdeen, who gave four apologetic lectures on "The Reasonableness of the Christian Faith," attended week by week by some six or seven hundred members of the University and the Women's Colleges—and Canon Peter Green, of Manchester, who tried to persuade us that the "greatest spiritual issue of to-day" is women's suffrage, a curious proposition for a clergyman, but Canon Green was an epigrammatist from his youth up. "Q" has lectured, as the London papers will have told your readers—the only one of our Professors so honoured.

We have a new Professor of Civil Law in Mr. W. W. Buckland. It is a Crown appointment; and it is whispered to me that quite a number of people were convinced that some one else was to have it on political grounds, and were horribly shocked when they found Mr. Asquith "did the right thing." Mr. Buckland has written the most authoritative work there is on the Roman Law of Slavery. He makes the eighth Professor now among the Fellows of Caius College. Eight Professors out of twenty-nine Fellows is probably a proportion that has never been exceeded.

The Christian Evidences Society which brought Prof. Cairns here this term brought us the Rev. P. N. Waggett some years ago; and once come, he stayed and still stays. He is to be our next Hulsean lecturer, and if ever Hulse's benefaction is to be turned to its original purposes it should be now. For it must be owned that youth and the appeal to youth for the defence of the Gospel are not what we generally associate with the Hulseans. However, Father Waggett has a tolerable acquaintance with youth and is likely to use an opportunity.

This leads me to speak of a menace lately directed at an institution. From time out of mind the *Cambridge Review* has printed the University Sermon. This term all lovers of our traditions and of University Sermons have been shocked by the proposal of some bold, bad man that the sermon should be printed no more in the *Review*. The

The University Sermon.

editor gave warning of the plot on foot, and according to his own account (and he ought to know) he has been overflowed with letters of protest. So the landmark is saved.

The Medical people still want to be pensioners of the Government. They have made out a list of the teachers and others they could do with and added up their stipends to £7,500, and tell us that with their number of students the grant might be £4,600.

A recent number of the *Reporter* (No. 1989, pages 564-571) contains a long report from them. One can still hope they may be defeated. *Auri sacra fames!*

Lord Strathcona has left John's College £10,000. A great controversy is raging over the nursing home. &c. There really are two, only this is not everywhere recognized; and terrible issues are involved if

something is not done (I think) by the Colleges to subsidize the one we have heard about. But why the Colleges should subsidize a concern of a type that pays its own way well enough elsewhere, I don't know. You will not want me to tell you about the Lent Races, and I am quite certain as to the last rumour about Mr. Lloyd George's visit to the Union. Anyhow, ladies will not be admitted.

WALES.

An important deputation, including Lord Kenyon, the Senior Deputy Chancellor of the University, the Earl of Plymouth, and the Principals of the three University colleges, has waited upon the Chancellor of the Exchequer to urge upon him the case for making a Government contribution towards the maintenance of the Medical School which it is proposed to establish at the University College, Cardiff. The school has been made possible by the generosity of the new Welsh knight, Sir W. J. Thomas, who has contributed the munificent sum of £30,000 towards the estimated total cost of £90,000. It is now announced that an anonymous donor has promised the remaining £60,000, so that all anxiety as to the provision of the equipment of the buildings has been removed. An appeal is now made to the Government to make a grant towards the annual expenditure and general upkeep of the school, and a very strong case in support of the appeal was submitted to the Chancellor. The University of Wales has so far been unable to exercise any considerable influence over the medical curriculum of its students, as at present the Cardiff School is only organized for a three years' course, the remaining two years of the course being spent in London or elsewhere. It is now proposed to equip the school so that it may provide a complete training for medicine and surgery. Luckily, there cannot be one of the time-honoured battle of sites over the question, because Cardiff is the only town which contains sufficient hospital accommodation for the purpose. The Chancellor gave a most sympathetic reply, and promised a substantial grant, after receiving the report of an expert committee which it is proposed to appoint, to advise as to its allocation.

The Superintendent of Education for Swansea has submitted to the Education Authority an elaborate report on the teaching of Welsh in the Borough, in which he sets very forcibly and succinctly the arguments for giving the native language its proper position in the curriculum of the elementary schools of the town. He divides the schools into two classes, the schools in the central areas of the town, where Welsh is little spoken, and the schools on the outskirts, where Welsh predominates. Mr. Rees proposes to solve the problem by making Welsh optional in the former, and compulsory in the latter, and this appears to be a reasonable and satisfactory compromise. The Education Committee by a large majority adopted the suggestion of the Superintendent, but for some inscrutable reason the Council, in an equally decisive manner, referred the whole question back again for further consideration. There was a very strong opposition on the part of several members to compulsion. A small sub-committee has now been appointed to ponder further over the matter, and to bring up more reports, which will be rejected or tied up with red-tape. One rather ingenious argument against bilingualism was advanced during the course of the debate, and it is really refreshing to hear something new on this ancient question. It was confidently asserted that bilingualism is largely responsible for stammering among children. Is there any physiological basis for this statement, or is it the discovery of a local debater, who has some difficulty in confounding his opponents? He has, in any case, raised an interesting point in connexion with language teaching, but until we get some fresh evidence, we are inclined to be a little sceptical about its truth.

At the Court of Governors of the College, over which the Earl of Plymouth presided, there was a long discussion on the inadequacy of the grants which the College receives from the Government. The Treasurer (Mr. H. M. Thompson) expressed the hope that one result of the quinquennial visitation which has just taken place would be a substantial increase in the grants for all Welsh Colleges. At present, the College at Cardiff received in grants a sum which was much smaller in comparison with the number of students than either of the other two Colleges, which is not fair treatment. With a larger number of students, the College naturally required a larger staff, and, besides, they had more expensive departments. Principal Griffiths thought that their financial position was so unsatisfactory, that unless it is rapidly improved the College will be prohibited from undertaking really advanced work, and will soon become merely a higher secondary school. When it is remembered that three-fourths of the students were originally pupils of primary schools, it is in the interests of the poor people of Wales that ample provision should be made so that their degrees shall be maintained at a high level. The disparity between the Colleges is shown by the following tables. If the grants are divided according to the staffs, it is found that Aberystwyth receives £111 per head, Bangor £122, and Cardiff only £78, and when compared as regards the number of students, Aberystwyth received £9. 4s. per student, Bangor, £12. 12s., and Cardiff, £7. These figures seem to prove conclusively that the treatment of Cardiff College is unfair and ungenerous.

The National Library Committee have arranged to send deputations to the chief towns of Wales, and to many industrial organizations, to try to excite their interest in the institution. Considerable success appears to have attended their efforts so far, though there is still a large deficit to be met on the building fund. In a pamphlet, which the Library has issued, we are told that the cost of the whole scheme is nearly £200,000, and that the buildings in the first part of the scheme will cost about £106,000. Towards this sum the Treasury will contribute £50,000, and £30,000 has been subscribed. There therefore remains £26,000 still to be raised.

An energetic and useful organization bearing this name has been in existence in Wales for two or three years. It is quite undenominational, and deals entirely with social problems affecting the people of Wales. Canon Buckley, the Archdeacon of Llandaff, is its present chairman. The subjects discussed during the past year were of practical importance, such as "The Industrial Schoolboy on Welsh Farms"—a question into which the Home Office is now inquiring—and "Welsh Social and Economic Changes of the Nineteenth Century," &c. The school will meet during the current year at Llandrindod Wells during the month of August.

SCOTLAND.

The Carnegie Trust has assigned to St. Andrews University a grant of £37,500, to be paid during the next five years. Of this sum £21,800 is allocated to St. Andrews and £15,700 to University College, Dundee. The St. Andrews portion of the grant is to be devoted mainly to the repayment of expenditure on buildings and to the University Library. The Dundee portion is to be expended on the endowment of a lectureship in Geology, on the engineering laboratory, and on building and purchase of ground. The Senate and Court have had under consideration the proposal to establish a Law School at Dundee by the appointment of lecturers in several law subjects. It has been decided that in present circumstances the proposal should not be adopted. The Senate has resolved that, after the present academic year, the custom of giving class prizes should be discontinued. Mr. John McHenry, Lecturer in Convancing at University College, Dundee, has resigned his lectureship, and the University Court has resolved to defer for a year the making of a new appointment. The General Council at a recent meeting considered the question of making a representation to the Carnegie Trust against the Trust's policy of voting the grants to the Universities mainly in the form of capital and not in that of income. The question was referred to a committee for report. The number of matriculated students in the Martinmas term was 498 (including 194 women), an increase of 5 as compared with last year. There is an increase of 21 in the number of men, and a decrease of 16 in the number of women. At St. Andrews there were 300 students, including 127 women, and at Dundee 198 students, including 67 women. Mr. S. C. Bate, B.Sc., has been appointed Assistant in Chemistry at University College, Dundee.

The University Court has adopted the report of a committee in favour of the proposals of the Association for securing higher instruction in Scottish rural schools, and has agreed to transmit copies of the

Glasgow.

report to the Secretary for Scotland and to the Scotch Education Department. The Court has also approved the recommendation of the Senate that Scottish History should be a subject in which a double course may be taken for the ordinary degree of M.A., and that the course of modern history, which must be taken along with it, may be attended either before or in the same year as the course of Scottish History. The next Commemoration Day is to be June 23, when Emeritus Professor Sir Hector Cameron will deliver an address on Lord Lister. Mr. J. D. Falconer, D.Sc., Lecturer in Geography, has been appointed to the Swiney Lectureship in Geology at the British Museum, and the University Court has given him permission to deliver the lectures in November or December of the next two sessions. Mr. Charles Cochrane has been appointed Assistant to the Professor of Natural Philosophy, and Miss Marjorie Ferguson has been appointed Assistant to the Lecturer in French. Mr. R. B. Cunningham Graham has been chosen as Socialist candidate for the Lord Rectorship. The Liberal and Conservative candidates have not yet been announced. Principal Sir Donald MacAlister has made satisfactory progress towards recovery from his illness, and he expects to return to Glasgow early in March.

The University Court has approved a recommendation of the Senatus regarding post-graduate instruction for advanced study and research in Mathematics, graduates being allowed to attend without payment

Edinburgh.

of a fee. It has been resolved to institute a degree of B.Sc. in engineering mining. Draft regulations for the diploma in Education have been approved by the Court.

The annual conference of the Students' Representative Councils was held at Glasgow on January 30 and 31. The conference passed a large number of resolutions, the most important of which were (1) that the preliminary examination in medicine should be made uniform with that for Arts and Science degrees; (2) that the same facilities be provided at the Scottish Universities as at Oxford and Cambridge for the study of Oriental languages and literature; (3) that in each of the Universities lectureships should be instituted in the history of medicine and in comparative religion, and (4) that the conference approve the general wearing of academic dress by the students of the Universities, and of the compulsory wearing of such dress on all official occasions, and crave the Senatus of each University so to ordain.

The Scottish Inter-Universities' Conference in the interest of modern languages met at St. Andrews, and passed resolutions to the effect that the Honours Examination in modern languages in the four

Modern Languages.

Universities should be placed on a uniform basis, and should take place uniformly in the four Universities at the end of the summer term; that a year's study abroad should take the place of training; and that English on the ordinary standard should be made a compulsory subject for the Honours degree in modern languages.

Meetings have been held at Dundee and Paisley in favour of the movement for Enlarged School Board areas. At Dundee Mr. Whyte, M.P., and Prof. Burnet, of St. Andrew's, were the chief speakers. At

Enlarged Areas.

Paisley Mr. D. T. Holmes, M.P., and Col. J. W. Greig, M.P., were among the speakers, and a letter was read from Sir Henry Craik, M.P., strongly supporting the movement. The appearance of Scottish Members of Parliament at these meetings is significant. It suggests that at last there is the possibility of some real progress towards a reform of the present system.

IRELAND.

The Board of Trinity College have appointed Dr. Louis Claude Purser, F.T.C.D., and Mr. J. G. Smyly, M.A., F.T.C.D., to the posts of Senior Proctor and Librarian respectively, left vacant by the death

Universities.

of the late Dr. Abbott.

As the Professorship of Mathematics has been vacated by Dr. Burnside on his election as Senior Fellow in the room of Dr. Abbott, the Board have appointed Mr. Stephen Kelleher, M.A., F.T.C.D., to the post.

At last there seems some prospect of a settlement whereby the £40,000 grant may be secured for Irish Secondary Education. In reply to a question in the House of Commons on February 19, Mr. Birrell

Secondary Education.

stated that a Bill regulating the application of the grant would

be introduced early this session, and held out hopes that the grant might be placed on the July Supplementary estimates.

The Association of Secondary Teachers, which has worked hard to secure the grant, has issued a pamphlet entitled "Secondary Education in Ireland and the Secondary Teachers," which is interesting, if rather depressing, reading. One section deals with the position and finance of the Intermediate Board, and points out that the sum given annually to aid Irish Secondary education (£79,526 according to the latest returns) is drawn wholly from Irish sources, and that Ireland receives nothing corresponding to the Treasury grants in the other countries (£800,000, £287,000, and £88,000 in the case of England, Scotland, and Wales respectively). The grievances of lay secondary teachers in the Catholic schools are set forth by one of their number in another section, various witnesses, Catholic and Protestant, being cited in support of the facts adduced. The Catholic lay teacher is worse off in respect of salary than his Protestant *confrère*; the salaries of £82 for men and £48 for women given as averages in Messrs. Dale and Stephen's report were based on returns drawn from Catholic and Protestant schools alike; many Catholic teachers, it appears, receive no more than 15s. or 20s. a week, with no pay during vacation. They have, moreover, to complain of the want of fixity of tenure, of chances of promotion, and of provision for old age or sickness. In the clerical schools—which now cover nearly the whole field of secondary education, so far as Catholic Ireland is concerned—the teacher's position is completely in the hands of the head master, from whose decision there is no appeal. In the Protestant schools, which are generally controlled by a Board of Governors, the case of the assistant teacher is better; though even here there is doubtless room for improvement. Things being as they are, it is not surprising that the majority of young Irish University graduates, men and women, who desire to take up teaching as a regular profession, emigrate as soon as they have finished their studies or training.

The final volume of evidence laid before the Viceregal Committee

Primary Education.

of Inquiry into Primary Education was issued at the end of last month, and at the same time the Report of the Committee also appeared. The chief item of interest in the former is the investigation of the notorious Mansfield case, concerning which one of the Commissioners (Major G. Dease), Miss Catherine Mahon (President of the Teachers' Organization), and Mr. Mansfield himself were heard at length. Miss Mahon, speaking on behalf of the teachers, brought complaints against the Inspectorate for the high-handed manner in which their duties were frequently discharged, and against the Board, which was practically inaccessible to deputations or representations of teachers' grievances.

In their Report the Committee state that they held sixty-five meetings, fifty-three of which were devoted to receiving evidence. Sixty-five witnesses were examined, amongst them Commissioners of the National Board, the Resident Commissioner (Dr. Starkie), and numerous officials of the Board, school managers, representatives of associations, and thirty-three teachers. The Report gives a historic sketch of the Irish system of national education, noting that it presents some features unparalleled in the educational systems of other countries. It consists at present of twenty members, appointed by Government, chosen rather for their prominence in public life than for special educational experience, and unpaid. These meet once a fortnight in the afternoon, and the attendance is necessarily fluctuating. The chief administrator, the Resident Commissioner, is at once a paid official and a full member of the Board, with very large powers. The Board is not a department under regular State control, except so far as the consent of the Treasury has to be obtained for every item of expenditure; nor is it subject to any popular control, whether local or Parliamentary; the system is therefore essentially bureaucratic. It has no power to raise money by rates, all funds being provided by the Treasury, which also controls its expenditure. The teachers are Civil Servants only in so far as their salaries and pensions are paid by the State; they are appointed and dismissed by the managers, subject to a certain control of the Board. The Managers are persons recognized by the Board who provide—or represent those who provide—the fabric of the schools, in some cases with State aid; they have practically the government of the schools.

The Report deals at length with the changes and reforms made in the year 1900 and their subsequent working, and offers criticisms on these, which may be grouped under the following main heads. A. The Inspectorate. The changes made in 1900, it is pointed out, were in the direction of bureaucratic control. At present the relations between senior and section inspectors are ill-defined and unsatisfactory; the former have little effective control, the latter often pursue their own way untrammelled by responsibility. The frequent changes of circuit inspectors are animadverted on, as

rendering it difficult for an inspector to become really acquainted with his schools; and the number of schools in each district increases the difficulty. Moreover, such changes largely account for the absence of uniformity in assigning merit marks to teachers, on which the Report lays some stress. The Committee are inclined to favour the contention of the teachers that every inspector should have practical experience as a teacher—not necessarily as an elementary teacher. They consider the initial salary of an inspector, £150, insufficient to attract highly qualified men. They recommend a redistribution of inspectors' districts so that the sole responsibility for reporting on one district shall rest on one inspector, who, if possible, shall be retained for some years therein. They recommend further that candidates for inspectorships should be appointed on probation for two years, and should at the end of each year of the period be favourably reported on by the chief inspectors; that every school should from time to time be subjected to a thorough inspection, with notice of at least a week to the manager and teacher, to be followed by a full report, such inspection to be made towards the end of the school year; that their reports should be communicated in full to managers and teachers without delay; that all instructions by circular issued to them for the general discharge of their duties should be simultaneously issued to managers and teachers. In view of the increased duties which may be laid on the two Chief Inspectors, they advise the appointment of at least four divisional inspectors. B. Teachers. At present the promotion of teachers depends (1) on the merit mark assigned by the inspector, (2) on the average attendance of pupils, and (3) on a prescribed number of years during which the teacher must have been at the maximum of his previous grade. The Committee strongly recommend the abolition of merit marks and with regard to (2) and (3) suggest an arrangement by which deserving teachers may be transferred from smaller to larger schools and their promotion may no longer be unduly retarded. Finance being outside the scope of the Committee, they content themselves with proposing a readjustment of the existing salaries, with annual instead of triennial increments. They consider that teachers have not at present sufficient power of appeal against adverse reports or of laying their grievances before the Board, and point out that in two well known cases of friction between teachers and inspectors within recent times, the one in Belfast, the other in Clonmel, no teacher received any redress, though the existence of grievances was subsequently recognized. They recommend that appeals from teachers and managers should be facilitated, and that where, in the opinion of the Chief Inspector, a sufficient case has been made out, a re-inspection should be made by officers of superior rank to the reporting inspector, and also that teachers should have fuller facilities for defending themselves against charges brought against their personal character. With regard to the alleged civil disabilities of teachers, they consider it undesirable that National Teachers should take an active part in party politics, but they advise the Board to modify their rule so far as to allow teachers to attend political meetings. C. With regard to the constitution of the Board itself, the Committee observe that, between Board meetings, "the Resident Commissioner is the Board for all purposes of administration," and they consider that some of the suggestions above recorded, notably that dealing with the appointment of four divisional inspectors, would lighten his responsibilities. They pay a high tribute to Dr. Starkie for the vigour and ability with which he has met the difficulties of his post. D. Finally, they suggest a greater elasticity of method, whereby the school program might be varied to suit special local circumstances. They note that "in England there is no such thing as a compulsory subject."

The criticisms of the Committee have, of course, themselves come in for a fair share of criticism. On the whole they have been favourably received by the teachers. At a recent meeting of National Teachers at Thurles, held to consider the report, Miss Mahon, the President of the National Teachers' Organization, described the constructive part of the Committee's Report as lamentably inadequate, owing to the limitations imposed on the Committee—they could not touch the bedrock of the teachers' grievances, the Board itself. Other (outside) critics point out that the exclusion of finance from the scope of the inquiry leaves the root of existing evils untouched; some have hinted that the object of the whole Commission was to draw a red herring across the track and, by engrossing attention on matters of education and administration, to divert it from the danger which threatens Irish primary education in the fact that a permanent and fixed grant, making no allowance for future developments, forms part of the Home Rule Bill. The two inspectors concerned in the Belfast and Clonmel cases dealt with by the Report have sent in strongly worded protests against the action of the Committee, which, they assert, refused to hear their version of the proceedings referred to.

The Classical Association of Ireland held its Annual General

General.

Meeting in Dublin on the afternoon of January 30, for the adoption of report and the election of officers. Prof. J. I. Beare, of Trinity College, was elected President for 1915. In the evening a public meeting was held in the Theatre of the Royal Dublin Society, when the President for the current year, Mr. Justice Ross, delivered a brilliant address on "The Greeks, the Romans, and Ourselves." The chief speaker on the paper was Sir Frederick Kenyon, President of the English Classical Association.

SCHOOLS.

HAILEYBURY COLLEGE.—The following Scholarships and Exhibitions have been gained: J. M. Ellis, Classical Scholarship, Emmanuel College, Cambridge; W. Tatham, Classical Scholarship, Exeter College, Oxford; W. E. H. Banks, Mathematical Scholarship, Clare College, Cambridge; G. C. Allchin, History Exhibition, Trinity College, Cambridge; M. A. Murray, Rustat History Scholarship, Jesus College, Cambridge; W. M. Sankey, History Scholarship, Corpus Christi College, Cambridge; A. H. B. Shipley, History Exhibition, Peterhouse, Cambridge; H. D. Hake, History Exhibition, Hertford College, Oxford; C. M. Crawford, Classical Scholarship, Magdalene College, Cambridge. The following qualified for admission into R.M.A., Woolwich, in January: F. G. W. Radcliffe (9th), D. M. L. Johnston, H. T. Clare, D. R. Critchley; and for admission into R.M.C., Sandhurst: C. D. M. Fowler (1st), A. R. Abercrombie, L. F. Marson, A. T. Peachey, M. R. Singleton, A. Sapte. Mr. C. A. Ronald has returned after an absence of five months in France.

HARROW COUNTY SCHOOL.—Mr. W. H. Richardson having taken up an appointment at University College, Nottingham, a new member of the staff is welcomed in Mr. A. E. R. Church, B.A., who comes to us with a high honours degree in Mathematics. On January 31 an excellent lecture was given at the School by Mr. Pett-Ridge, on "Cockney Humour." The lecture was greatly enjoyed by a large audience. The series of "Music Nights" was continued on February 6 by Herr Emil Krall, who gave a very popular recital on the Violoncello. Only the boys attend these music-nights, which are of the nature of an informal music lesson.

OXFORD, MILHAM FORD SCHOOL.—Prize Distribution took place on February 4. The Principal, Miss C. I. Dodd, announced the following distinctions of the past year: Open Scholarship in English at Lady Margaret Hall, Lucy Pritchard; in Mathematics at University College, Reading, Kathleen Richardson. Oxford Senior Locals, Class I, Honours: C. Ellis, D. Groom, G. Mattock. Royal Drawing Society: fifty-one Honour certificates.

WINCHESTER COLLEGE.—Rev. R. Quirk has been appointed Chaplain in place of Rev. J. T. Bramston, who has retired. R. H. Fowler, J. L. Sowerbutts (music), and G. S. Leach are working here this term.

PRIZE COMPETITIONS.

The winner of the Translation Prize for November is Miss E. M. Alexander, Fisher's Hill, Woking.

The winner of the Translation Prize for January is Walter J. Purton, Esq., 51 Rathmines Road, Dublin.

The February Prize is awarded to "Artegall."

Si on a contesté à Madame de Sévigné la naïveté de ses lettres, on ne lui a pas moins contesté la sincérité de son amour pour sa fille; et en cela on a encore oublié le temps où elle vivait, et combien dans cette vie de luxe et de désœuvrement, les passions peuvent ressembler à des fantaisies, de même que les manies y deviennent souvent des passions. Elle idolâtrait sa fille et s'était de bonne heure établie dans le monde sur ce pied-là. Arnauld d'Andilly l'appelait à cet égard une *jolie païenne*. L'éloignement n'avait fait qu'exalter sa tendresse; elle n'avait guère autre chose à quoi penser; les questions, les compliments de tous ceux qu'elle voyait la ramenaient là-dessus; cette chère et presque unique affection de son cœur avait fini par être à la longue pour elle une contenance, dont elle avait besoin comme d'un éventail. D'ailleurs Madame de Sévigné était parfaitement sincère, ouverte, et ennemie des faux-semblants; c'est même à elle, une des premières, qu'on doit d'avoir dit une personne *vraie*: elle aurait inventé cette expression pour sa fille, si M. de la Rochefoucauld ne l'avait déjà

King George V.

DUSMO

The Dustless Sweeping Powder

BRITISH MEDICAL JOURNAL.

"A practical trial showed that 'Dusmo' answered its purpose in a very satisfactory manner, and may prove of great use in hospitals and sick rooms, and of considerable value for ordinary domestic purposes as an antiseptic dust preventer."

The removal of dust prevents the spread of infection. — Keep your School healthy by the use of 'DUSMO.'

**PRACTICAL.
EFFICIENT.
ECONOMICAL.**

'DUSMO' can be used any and every day of Term. The Schoolroom is available immediately; there is no tedious drying or 'dusting' to wait for.

'Dusmo' is the cleanest, quickest, and most economical sweeping powder for effectively freeing your school from dust. *Dust simply can't exist where 'Dusmo' is used.* It is manufactured in two forms—'Dusmo' for use on carpets, and 'Dusmo' 'B' especially prepared for use on wood, linoleum, stone or marble floors. 'Dusmo' contains no oil or grease, and is disinfectant.

**DUST CANNOT RISE.
THE FLOOR IS SCAURED.
RESULT: A CLEAN SWEEP.**

The 'Dusmo' method *absolutely* prevents the dust from rising *and removes it*. When the accumulated dust has been absorbed the quantity of 'Dusmo' used daily is very small, and the cost would be even *cheaper than sawdust*. The old method of using water or damp sawdust coagulates the dust, leaving it sticking to the floor to return to dust again when dry.

DUSMO COMPANY, LTD.,

**11 QUEEN VICTORIA ST.,
LONDON, E.C.**

trouvée pour Madame de La Fayette; elle se plait du moins à l'appliquer à ce qu'elle aime. Quand on a bien analysé et retourné en cent façons cet inépuisable amour de mère, on en revient à l'avis et à l'explication de M. de Pomponne: "Il paraît que Madame de Sévigné aime passionnément Madame de Grignan? Savez-vous le dessous des cartes? C'est qu'elle l'aime passionnément." Ce serait en vérité se montrer ingrat que de chicaner Madame de Sévigné sur cette innocente et légitime passion à laquelle on est redevable de suivre pas à pas la femme la plus spirituelle, durant vingt-six années de la plus aimable époque de la plus aimable société française.

By "ARTEGALL."

It is true that the spontaneity of Madame de Sévigné's letters has been called in question; it is no less true that doubts have been expressed concerning the sincerity of her love for her daughter. Here again allowance has not been made for the times in which she lived, nor for the extent to which in such a life of luxury and leisure a passion may resemble a caprice, even as a folly, under these conditions, often becomes a passion. She worshipped her daughter and had at an early stage won from her world acceptance of the fact. Arnold d'Andilly recognized this when he called her "a pretty pagan." The sole effect of separation was to enhance her tenderness; she had little else to occupy her thought; the questions, the compliments of all the people she met brought her back to the one theme. Eventually this cherished affection of her heart, almost its only one, became as necessary to her bearing and deportment as a fan. Furthermore, Madame de Sévigné was absolutely sincere and frank, a foe to all pretence; she must have been one of the first to whom the word "genuine" was used in describing a person, and would have invented the epithet for her daughter if M. de la Rochefoucauld had not already found it for Madame de la Fayette; at any rate she delights in applying the term to what she loves. When we have carefully analysed and examined in a hundred ways her inexhaustible mother's love we fall back on the view and explanation expressed by M. de Pomponne: "Madame de Sévigné seems to be passionately devoted to Madame de Grignan? Do you know the secret? She is passionately devoted to her." It would be an act of downright ingratitude to take Madame de Sévigné to task for a harmless, natural passion

to which we owe our ability to follow this most talented of women, step by step, through twenty-six years of the most delightful period of the most delightful French Society.

We classify the 229 versions received as follows:—

First Class.—Archie, Edda, Amadan, Editha, Djenane, France, Saxon, Mander, S.X., Gaudeamus, Artegall, Garnet, Fialka, Abacus.

Second Class.—Boggart, Wiccamicus, Menevia, Allobroge, Unbegabte Frau, Eldorado, Gockel, Shakespere, W.R.D., Ballincaroona, Buridan, Scottie, Viola, Borealis, Débutante, C.E.G.W., Katherine Ken, Temperino, Cemvalle, Oakthorpe, Spirits, Nut Cracker, Cunctator, Chicane, Andante, Zamboanga, The Curé, Leek, A.G.D., Felicia, Darseq, Larch, H.L.B., P.O.C., Dane, Pug, Non sibi, Q.E.F., Banshee, H. March, Francesca, Red Indian, Blako, M.A.D., Sphinx, Blue Bird, F.S., Sorrento, R.D.S., Mme Roland, Babel, Christmas Chab, Gothicus, Cairngorm, Peter, Carolus, Badger, Fortes et fidelis, Old Savilian, Pegasus, Emil, Mariana, Beowulf, Zwei in Eins, Billiken, Entente, Edelweiss, W.B.D., Knossos, Marcus, E.L.M.S., Hippo, Floriania, H.M.S., Chingleput, Chantal, Palcum, Désirée Candeille, Horbez, Leodien-cian, Automedon, Klit, Saunton.

Third Class.—S.L., Alone, Red Rose, Aquae Solis, Brumaire, Vivian, A.D., I.C.D., S.L.E.C., G.A., Kyro, Orient, Douai, Kareen, J.A.C., Clement Wreford, Pat, Oiseau, Paganini, Bruno, Silli, Shamrock, Nemo, Ignarus, R.S., W.H.S., E.J.P., G.R.H.S., Mousmée, Débutante, Saxone, R.M.M., J.O.L., Robin Hood, Sparrow, M.M., Gareth, S.E.R., Dorma, M.H.S., Excelsior, J.R., C.F., Mergy, Tranquillus, A daughter of Erin, Nimoise, Johnny, Audax, Rex, Annulus, A.M.D.H., A.S.B., Lavender, Gerard, Clodoald, Moriando Vivo, Bee Dee, Nesco, The Scarlet Pimpernel, Cerise, Chislehurst, Nil Desperandum, Treb, Sirach, A.C.S., R.E.K., Héloïse.

Fourth Class.—Brandwood, Rook, Tubby, Hermia, Sibylla, Bap, Myosotis, Dorothy Green, L.F.D., Tienrab, Kim (Derby), Fereen, Townshend, Grand-père, Nutty, Bear, Omega, Faux Pas, Nettab, Rag Time, Corbeau, Rosa Leigh, R.C.L.S., H.D., D.M.M., Genét breton, Puella, M.A.S., H.H.M., Badger, Tyro, Ellis, F², Joan, Langdon, Hélène, J.A.P., Jan, Nil Desperandum, N'est-ce-pas?, Maidenhythe, Fernanda.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.

Rector: The Right Hon. THE EARL OF MINTO, P.C., G.C.M.G., LL.D., &c.

Principal and Vice-Chancellor: Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.

Secretary of Senatus: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Winter Session** begins about the beginning of October and closes about the middle of March.

The **Summer Session**, except in Law, extends from about the middle of April to the end of June.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery**, and **Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Arts Degrees**, the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the Combination of Arts, Science, Medical, or Special Studies, and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. Education in Military subjects is given in connexion with the Scheme of allotment of Army Commissions to Graduates of the University. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering, Public Health, and Veterinary Science**; and the Degree of B.Sc. in **Agriculture and Forestry**. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The **Law** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of the Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories, and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.); and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There is also a **Diploma in Psychiatry** (Dipl. Psych.). A University **Certificate in Tropical Diseases** is conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 43 Professors, over 90 Lecturers, and about 60 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £19,790. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, Law, and Music, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music, the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 5d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers: Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each.

**SUPERIOR SCHOOL STATIONERY
FURNITURE AND REQUISITES**

FLAT FILES.

The **Practical File** is one of the best flat files ever issued. It has a clever locking device, which securely holds the filed papers in position. Supplied in four colours and in several sizes, prices from 24/- per 100.

THE VIADUCT FILE.

This is a similar File to the "Practical," but while in has no "locking" device, the method employed for securely holding the papers is perfectly adequate. The "Viaduct" File is supplied in four colours in two sizes. Prices from 18/- per 100.

FILING BLOCKS.

Blocks for use with any standard files are kept in stock. They are made of superior cream-laid paper, and are much superior to any others issued. The Blocks are ruled exercise and margin; unruled and margin; one-tenth squares. Sizes: Sixmo, 8 x 6½, from 22/- per 100; Quarto, 10½ x 8, 34/-; Foolscap, 13 x 8, 44/-.

LOOSE LEAF BOOKS.

The "Century" Loose Leaf Binder is a superior stiff cloth bound cover, which opens quite flat: the loose leaves being held in position by two ring wires, which are opened or locked by moving a lever thumb piece up or down. In two sizes. Quarto, for paper 8½ x 10 in., ea. 1/-; Sixmo, 6½ x 8, 10d. Paper ruled faint and margin to fit the binder, in packets of 80 sheets, Quarto, 8½ x 10 in., doz. pkts., 5/-; Sixmo, 6½ x 8, 8/8.

40-44 HOLBORN VIADUCT, LONDON, E.C.

Fifth Class.—Biscuit, Tango, Boulanger, Leviathan, Thinom, Bergmann, Cui bono, Bos, P.A.T., Lulu, S.O.T., Jimbo, Hiram, Willy, Pinch, Ore, Lubeck, John, L.P., Peer Gynt, Rosary.

In his preface to Madame de Sévigné's Letters Ste-Beuve has not only drawn a striking likeness of the writer, but also caught something of her style, and the passage attracted a large field of competitors. There is only one real crux—how to find an exact equivalent for *une contenance*. The phrase is borrowed from the Letters: "M. de Lavardin fait ici l'amoureux d'une petite madame; j'ai trouvé que c'est une contenance dont il a besoin comme d'un éventail." Littré defines it "manière de se tenir, de se montrer." "Pose," "posture," still more "mask," suggests something artificial and unreal; "attitude" is nearer the mark. *Naïveté* presents a similar difficulty. The word as adopted in English has departed farther from the Latin *nativitas* ("naturalness") and always suggests the ignorance as well as the innocence of a child. Here "spontaneity" is perhaps the best equivalent. To pass to minor points: in the first sentence *on* should be turned by a passive; "we" or "one" confounds the writer with the critics he is condemning. *Encore* (in their judgment of her love, as of her letters) was commonly omitted. *Les manies y deviennent des passions*: "caprices are exalted into passions." *Etablie dans le monde sur ce pied-là*: "she had taken her position in society in this character," or, more freely, "as the devoted mother." *A elle qu'on doit d'avoir dit*: the French is ambiguous, but the context clearly shows that it must mean Mme de Sévigné was among the first to apply the epithet "true" to persons, not that the word was first applied to her: Cf. Shakespeare's "a true man or a thief." *Il paraît*: not "it seems as if," but "it is evident." *Le dessous des cartes*: "the key to the enigma." The riddle, of course, is how a brilliant woman like Madame de Sévigné can be passionately attached to a commonplace person like Madame de Grignan, and the answer can be made more effective in English than in French, "that she is passionately attached to her." The last sentence needed careful handling; "the wittiest woman" by itself will not stand. "The brightest and wittiest of women during the twenty-six years when the most attractive society in all France was at its best."

Competitors will please avoid hackneyed pseudonyms like "Nil Desperandum," of which there are several duplicates this month.

A Prize of Two Guineas is offered for the best translation of the following passage from Claudian:—

Felix, qui propriis aevum transegit in arvis,
ipsa domus puerum quem videt, ipsa senem,
qui baculo nitens in qua reptavit harena
unius numerat saecula longa casae.
Illum non vario traxit fortuna tumultu,
nec bibit ignotas mobilis hospes aquas.
Non freta mercator tremuit, non classica miles,
non rauci lites pertulit ille fori.
Indocilis rerum, vicinae nescius urbis,
adspectu fruitur liberiore poli.
Frugibus alternis, non consule computat annum:
autumnus pomis, ver sibi flore notat.
Idem condit ager soles idemque reducit,
metiturque suo rusticus orbe diem,
ingentem meminit parvo qui germine quercum
aequaeumque videt consenuisse nemus,
proxima cui nigris Verona remotior Indis
Benacumque putat litora Rubra lacum.
Sed tamen indomitae vires firmisque lacertis
aetas robustum tertia cernit avum.
Erret et extremos alter scrutetur Hiberos:
plus habet hic vitae, plus habet ille viae.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by March 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

ASSISTANT MISTRESSES AND GOVERNESSES.

Messrs. GABBITAS, THRING & CO.,

36 SACKVILLE STREET, LONDON, W.,

have a Department for SECURING APPOINTMENTS as MISTRESSES or MATRONS in Schools, and as GOVERNESSES in Private Families.

They invite applications from qualified ladies who are looking for posts in the teaching profession.

The Agency, which is under distinguished patronage, has been established 40 years.

Prospectus will be forwarded gratis on application.

NO CHARGE FOR REGISTRATION.

No fee of any kind is due unless an appointment be obtained through the Agency.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS.

MESSRS. GABBITAS, THRING & CO. have a large number of **GIRLS' SCHOOLS** on the books of their Transfer Department, but **ISSUE NO LIST**. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are a few of the Schools now on their books:—

IN AND NEAR LONDON.

No. **PARTNERSHIP** with view to succession in 5,283. a successful School for **BOARDERS ONLY**, in a **GOOD RESIDENTIAL QUARTER**. Containing 16 to 18 Pupils. Prospectus fees £95 to £115 per annum. Gross receipts over £2,500. and profits about £250. For half share of goodwill about £500.

No. **PARTNERSHIP** in, or **TRANSFER** of, 4,863. **FIRST RATE SCHOOL FOR BOARDERS AND DAY PUPILS**, in a pleasant residential locality. Good House with 13 acres. Accommodation for 45 Boarders. **NEARLY FULL** as to Boarders, and a good attendance of Day Pupils. Prospectus fees for Boarders 90 to 120 guineas. Gross receipts well over £6,000.

No. **TRANSFER** of **PROFITABLE BOARDING AND DAY SCHOOL** 4,694. in healthy residential locality. Grounds of 4 or 5 acres. About 15 Boarders and 25 Day Pupils. Prospectus fees from £75 to £94 10s., and from £12 12s. to £22 1s. respectively. Good Continental connexion. Gross receipts about £2,500, and profits £500. Goodwill £1,250.

IN THE SOUTH OF ENGLAND.

No. **TRANSFER** or **PARTNERSHIP**, with a 5,315. view to succession. School strictly for gentlemen's daughters, at South Coast Resort. About 20 Boarders and 12 Day Pupils. Fees £75 to £90, and 30 to 36 guineas respectively. Profits about £800. Excellent **PREMISES, SPECIALLY BUILT AND BEAUTIFULLY SITUATED**. Goodwill 2½ years' purchase. Premises would be sold or let.

No. **NUCLEUS** of a few young Boarders and 5,297. of Day Girls at a South Coast Resort. Principals moving and taking a few older girls only. Would send all enquiries for younger Pupils and Day Girls to their former School. *Capitation fee* on Pupils handed over.

IN THE SOUTH OF ENGLAND—continued.

No. **TRANSFER** of **FIRST-RATE AND 5,293. FLOURISHING BOARDING SCHOOL**, at South Coast Resort. Steadily full with 40 to 45 Boarders. Fees 90 to 105 guineas. Gross receipts about £8,000; **PROFITS ABOUT £1,500**. About £4,200 for goodwill. Furniture at valuation. Part purchase money accepted in the first instance.

No. **DAY** connexion in the Home Counties, 5,319. suitable for a **LADY WITH NAVAL OR MILITARY CONNEXION**. Vendors moving to a different part of the country and taking Boarders only for the future. About 20 Day Pupils. The only School strictly for **GENTLEMEN'S DAUGHTERS** in the locality. Receipts from Day Pupils nearly £400. Goodwill £150.

No. **TRANSFER** or **PARTNERSHIP**, with 5,312. view to succession, of old-established and very **SUCCESSFUL SCHOOL** for the daughters of professional men, Boarders only, at a **SOUTH-EAST COAST RESORT**. About 35 Pupils, at fees of 70 to 80 guineas. **PRACTICALLY FULL. PREMISES** specially erected for the School. Gross receipts over £2,700, and net profits over £450. **BOTH INCREASING**. For goodwill, furniture, and equipment about £2,000. Premises would be let.

No. **TRANSFER** of **FLOURISHING 5,287. BOARDING AND DAY SCHOOL** in an **IMPROVING RESIDENTIAL DISTRICT**, on the outskirts of a healthy seaside town, containing nearly 20 Boarders and 40 Day Pupils and Day Boarders. Prospectus fees respectively 45 to 75 and 12 to 18 guineas per annum. Day Boarders pay 9 guineas in addition. Gross receipts over £1,800, and profits over £400. Goodwill £900.

IN THE NORTH AND MIDLANDS.

No. **OLD-ESTABLISHED** and **VERY PRO- 5,317. FITABLE** Boarding and Day School, with Kindergarten, in Suburb of North Midland City. House specially constructed for the School. About

In the NORTH AND MIDLANDS—continued.

25 Boarders and 55 Day Pupils. Prospectus fees 60 guineas, and from 3 to 15 guineas. Gross receipts about £1,500. **STEADY ANNUAL PROFIT** of about £600. Goodwill £700.

No. **TRANSFER** of good-class small **MIXED 5,304. PREPARATORY DAY SCHOOL** and Kindergarten at a residential locality near a Midland city, containing nearly 20 Pupils. Profit about £100. Goodwill £100, or capitation fee.

No. **TRANSFER** of old-established and very 4,977. flourishing **BOARDING AND DAY SCHOOL** for gentlemen's daughters at **North West Coast Resort**. About 35 Boarders and 30 Day Pupils. Fees 60 to 66 and 9 to 27 guineas. Gross receipts nearly £4,000, and **NET PROFITS ABOUT £800**. Goodwill £2,000. Housecraft Department. **EXCELLENT EDUCATIONAL SCHOOL**.

ON THE CONTINENT.

No. **TRANSFER** or **PARTNERSHIP** in **EDU- 5,314. CATIONAL HOME OF THE HIGHEST CLASS** on the Continent. **BEAUTIFUL DETACHED HOUSE AND GROUNDS**. Usually 6 or 8 Pupils finishing their education. Fees from £150 to £180 per annum. The **HIGHEST REFERENCES** in this Country and on the Continent.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

Telephone:
7091 Gerrard.

SCHOOL TRANSFER AGENCY.

(Established

SCHOOL ORDERS.—A Gentleman already visiting Schools, Board, Church, and Private, can hear of additional commission by applying to McCaw, Stevenson & Orr, Ltd., Publishers, Belfast. State ground worked.

THE APPOINTMENT OF THREE ASSISTANT MISTRESSES to the EDUCATION DEPARTMENT OF HONG KONG.

The Secretary of State for the Colonies requires **THREE ASSISTANT MISTRESSES** for the Education Department, Hong Kong. Candidates who are between 25 and 30 years of age will be preferred.

All the Mistresses are required to produce evidence of training, and one of them should be qualified to teach kindergarten subjects.

Each Mistress is required to be able to teach Arithmetic, Religious Knowledge, History, English Language and Literature, and Geography up to the standard of the Senior Oxford Local Examination, and also two subjects of each of the following groups of subjects: Group I., French, Sewing, Swedish Drill; Group II., Music (piano), Domestic Economy, Drawing, German, Latin.

The engagement will be in the first instance for three years, and if at the end of the time their service has been satisfactory, the Assistant Mistresses will be placed, if mutually agreed, on the pensionable establishment of the Colony.

A salary at the rate of £200 for each of the three years of the engagement will be paid to the Assistant Mistresses, and subject to the permission of the Director of Education, they may undertake private tuition. Half salary will be paid from the date of embarkation from England, and full salary from the date of arrival in the Colony. If an Assistant Mistress is placed on the pensionable establishment, her salary will be at the rate of £230 a year.

One of the appointments includes residence. Free passage is provided.

Further information may be obtained from the **SECRETARY, Board of Education, Whitehall, London, S.W.** Scottish candidates should apply to the **SECRETARY, Scotch Education Department, Whitehall, London, S.W.**

APPOINTMENT of an ASSISTANT MASTER at KING EDWARD VII. SCHOOL, JOHANNESBURG, SOUTH AFRICA.

The High Commissioner for the Union of South Africa requires an **ASSISTANT MASTER** for King Edward VII. School, Johannesburg.

The appointment, which may be resident, will be to Grade A of the Transvaal Classification for High Schools, at a salary of £440-£20-£500 per annum.

Candidates should possess a University degree in Honours, the general qualifications necessary for Assistant Masters, special qualifications in English, including a knowledge of Phonetics, and successful teaching experience, and should be able to organise and take part in school games.

They should be unmarried and about 30 years of age. The selected candidate will probably be required to take the highest work in the school in English, and might be made responsible for the direction of much of the English work in the lower classes.

Applications and inquiries should be addressed in covers marked "C.A." to the **SECRETARY, Board of Education, Whitehall, London, S.W.** Scottish Candidates should apply to the **SECRETARY, Scotch Education Department, Whitehall, London, S.W.**

The selected candidate will be required to take up duty at Johannesburg as soon as can conveniently be arranged.

KING'S HIGH SCHOOL FOR GIRLS, WARWICK.—Wanted, at the end of April, an **ASSISTANT MISTRESS** for Swedish Drill and Games, who would be willing to help with the general work of the Junior School. Salary £100. Apply **HEAD MISTRESS**.

BIRKENHEAD EDUCATION COMMITTEE.

GIRLS' SECONDARY SCHOOL.

Applications are invited for the position of **HEAD MISTRESS** of the Girls' Secondary School. Commencing salary £300 per annum, rising by annual increments of £15 to £360 per annum.

Particulars of the duties and conditions of the appointment, together with a form of application, which must be returned by the 9th March, 1914, may be obtained from

ROBERT T. JONES,
Town Hall, Birkenhead. Secretary.
14th February, 1914.

COLLEGIATE SCHOOL FOR GIRLS, BOURNEMOUTH. Required, in May, Resident **MUSIC MISTRESS** for advanced work in Piano, with ability to take Class Singing. Degree and School experience essential. Modern methods. Suitable applications only acknowledged. Apply **PRINCIPAL, Towerfield, Bournemouth**.

GLAMORGAN COUNTY COUNCIL.

MACMILLAN & CO.'S LATEST LIST.

SECOND EDITION, REVISED.

A History of Greece to the Death of Alexander the Great. By J. B. BURY, D.Litt., LL.D., F.B.A. With Maps and Plans. Second Edition. Crown 8vo. 8s. 6d.

*. In this edition the first chapter has been largely re-written in order to take account of the recent discoveries in Crete, while among other minor changes the accounts of the battles of Salamis and Plataea have been partly rewritten.

MATHEMATICS AND SCIENCE.

Exercises in Mathematics. By DAVID BEVERIDGE MAIR, M.A., sometime Fellow of Christ's College, Cambridge. With Answers and Hints, 4s. 6d.; also without Answers and Hints, 3s. 6d.

THE EDUCATOR.—"This is one of the best collections of examples which has been submitted to us for a long while. Mr. Mair knows his subject, and what is really of more importance, he knows the requirements of the various examining bodies. It is therefore not to be wondered at, that no matter what examination the student has in view, he will find here exercises particularly applicable to his requirements. Examination students, especially those preparing for Girl and Woman Clerkships and Second Division Examinations, will find the book extremely useful."

Practical Mathematics for Technical Students. Part I. By T. S. USHERWOOD, B.Sc. (Lond.), A.M.I.Mech.E., and C. J. A. TRIMBLE, B.A. 3s. 6d.

Exercises in Algebra: from A New Algebra. Parts I to IV. By S. BARNARD, M.A., and J. M. CHILD, B.A., B.Sc. 2s. 6d.

Test Papers in Elementary Algebra. By CLEMENT V. DURELL, M.A., Assistant Master at Winchester College. 3s. 6d.

SECOND EDITION, THOROUGHLY REVISED.

Practical Exercises in Heat. Being a Laboratory Course for Schools of Science. By E. S. A. ROBSON, M.Sc. Second Edition, thoroughly revised. 3s. 6d.

ENGLISH.

The Shorter Modern Dictionary of the English Language. Over 27,000 Entries, including Words, Phrases, Abbreviations, Foreign Words and Phrases, all arranged in one alphabetical order. 380 pp. cloth boards, 1s. net; limp cloth, 1s.

ENGLISH LITERATURE FOR SECONDARY SCHOOLS.—*New Volumes.*

Wanderings in Spain, selections from "The Bible in Spain" of George Borrow. With Introduction, Notes, &c., by F. A. CAVENAGH, M.A., Fellow of University College, London, &c. 1s.

Scott's Tales of a Grandfather. Second Series. Abridged and Edited for Schools by J. HUTCHISON. With Frontispiece. 1s.

Sertum: A Garland of Prose Narratives. Selected and Edited by J. H. FOWLER and H. W. M. PARR. Book I. Sixteenth to Eighteenth Centuries. With Frontispiece. 1s.

Notes on the Teaching of English. By W. BATCHELDER. Part II. 1s. 6d.

FRENCH AND GERMAN.

Victor et Victorine. Par Madame J. G. FRAZER, Auteur de "Émile et Hélène," &c. Dessins de H. M. BROCK. 1s.

EDUCATIONAL NEWS.—"This is a really charming book for quite young beginners. . . . The illustrations are really delightful. Mrs. Frazer's name is sufficient to recommend it in any case."

Die Erhebung Preussens gegen Napoleon im Jahre 1813. Von GUSTAV FREYTAG. Edited with a selection of Original Documents and Poems of the Time. By OLTO SIEPMANN. 2s. 6d. *Siepmann's Advanced German Series.*
Word and Phrase Book to same. Sewed, 6d. **Key**, 2s. 6d. net.

GEOGRAPHY.

A Junior Geography of the World. By B. C. WALLIS, B.Sc. (Lond.), F.R.G.S., &c. With Maps and Illustrations. 2s. 6d. [*Macmillan's Practical Modern Geographies.*]

EDUCATION.—"Amongst the many geographies prepared for the use of junior pupils this is of superior merit. . . . The pupil making proper use of the text will be able to face the ordeal with the assurance of safety. . . . The book is altogether a desirable one from the point of view of the practical teacher."

SCHOOL WORLD.—"Fully maintains the high standard of the volumes which have appeared already in this series. . . . Throughout the book the descriptions are written in an interesting style, and the information is trustworthy and accurate. The descriptions are supplemented by practical exercises of a most instructive and suggestive type."

South America. A Supplementary Geography. By J. F. and A. H. CHAMBERLAIN. Illustrated. 3s.

EDUCATION.

An Introduction to Logic from the Standpoint of Education. By L. J. RUSSELL, M.A., B.Sc., Lecturer in Logic in the University of Glasgow, &c. 2s. 6d. net.

VOL. V, CONCLUDING THE WORK.

A Cyclopaedia of Education. Edited by PAUL MONROE, Ph.D. With the assistance of Departmental Editors, and several hundred Individual Contributors. Vol. V, Pol-Zwi. Illustrated. 21s. net. Previously published:—Vol. I, A—Chu. Vol. II, Chu—Fus. Vol. III, Gai—Lib. Vol. IV, Lib—Pol. 21s. each net.

THE GUARDIAN.—"To teachers and all concerned with educational matters the 'Cyclopaedia of Education' can be highly recommended for purposes of reference. It has the great merit of being strictly impartial, and the general accuracy of the articles upon European Movements and Institutions may be relied upon."

A History of Education in Modern Times. By F. P. GRAVES, Ph.D., Professor of the History of Education in the University of Pennsylvania, &c. 5s. net.

EDITED BY

T. N. KELYNACK, M.D.

Assisted by a representative Staff of Medical, Educational, and Philanthropic Experts.

THE CHILD is a monthly journal designed to meet the requirements of all engaged in Child Study or working for the betterment of Child Life. It is a medico-sociological and educational journal dealing with all questions relating to Infancy, Childhood, and Youth. Parents, Educationists, Philanthropic Workers, School Doctors, Students of Child Life, and all interested in the well-being of Children will find in THE CHILD a representative organ. It is a journal specially designed to secure the co-ordination of all work and the co-operation of every class of workers for Child Betterment.

PUBLISHED MONTHLY. Price 2s. net.

ANNUAL SUBSCRIPTION TO ALL PARTS OF THE WORLD.

ONE GUINEA, or \$5.25.

A Specimen Copy will be forwarded on receipt of 3d. for postage.

SCHOOL AS A PREPARATION FOR LIFE.

THERE used to be a favourite poser for the teacher in training. Do we desire to make the child the best possible child or to direct its growth so that it may be the best possible man or woman? Only the rough and ready thinker can assume that the alternative is an imaginary one. The "old-fashioned" training and discipline of children certainly aimed at making the best possible child: obedient, quiet, self-effacing and meekly receptive of adult wisdom. Modern thought seems to have reached the conclusion that, in attaining this degree of virtue in childhood, many capacities were dwarfed, faculties stultified and energies destroyed, to the lasting loss of the future man or woman.

Our system of education follows and reflects the spirit of indulgence which has superseded the austerity of the relations of teacher and pupil in the past. No one is burdened overmuch with any anxiety to produce the best possible child; every one is hopefully anticipating that, in providing that it shall have plenty of opportunities and a "good time," it will develop into an altogether satisfactory man or woman. We have now had some years' experience of the theory of joint irresponsibility; many of the young things of whom, and for whom, great things were expected, are growing up into very ordinary people. Their initiative has not been destroyed by authoritative dominance; their spontaneity not crushed by unsympathetic repression; their outlook not cramped by subservience to adult opinion. Yet something seems lacking; and complaints are heard as to want of adaptability, absence of "grit," and a disturbing aloofness from the actual duties of life in the girl and boy just emerging from the *statu pupillari*.

Part of the dissatisfaction finds vent in blaming our school education. It is charged with being unpractical and with having no bearing on the future expected life of the child; with being, indeed, planned as an end in itself. Thus it is administered with an elaborate system of schemes and examinations and courses, none of which has any connexion with the actualities in which the citizen of to-day is immersed. We see, too, certain impatient remedies proposed and adopted; such as the grafting upon a curriculum, invariably over-full already, the beginnings of such eminently practical subjects as trades, crafts, and the domestic arts; and these are accepted in some quarters as not merely correctives, but even specific cures, for the bookish desultoriness from which our young people seem to suffer.

It may be necessary to revise very thoroughly the system of compulsory State education, which has shortsightedly drifted into the production of a sort of *babu* proletariat, but this revision is a matter of limited expediency and is based upon no universal guiding principle. The flaws in modern methods of education will not be removed by merely tampering with the curricula in obedience to every wind of utilitarian demand or noisy blast of shrewd commercial exploiting, but rather in the growth of an idea. Whatever the stress of modern life and the pressure of competition, it is needful to insist upon the truth that life is more than getting a living, and that the true aim of education is to develop the personality of the learner, so that it may rise above, instead of being cumbered with, the sordid cares of poverty and riches. To be responsive to the appeal of beauty in action and conduct, to be sincere, upright, fearless, to know how to employ leisure worthily—this it is to *live*.

If, then, such an aim inspires the educator, what means shall be taken to achieve it? How shall the individual powers and faculties, the taste and the imagination, be cultivated and trained so that the child shall grow up into the sane intelligent man or woman? First, as to the physical side. There is need to steer between the extravagant amount of time and attention bestowed on organized games and sports and the morbid anxiety about not health, but ill-health. The province of education lies in the suggestion of a personal ideal as much as in the giving of information about bodily structure and its capacities for disease. And, besides the cultivation of a high state of health in the individual, there is needed a

sensitive public consciousness that to be well is a social duty; and the inculcation of habits of mental control of physical tendencies should tend to destroy the fashionable cult of nerves.

As preparation for life in intellectual things the first essential is not the acquisition of knowledge but the right spirit and attitude. In this right spirit are comprised, besides the desire to know, intellectual honesty, patience, and humility. The dignity and worthiness of knowledge and not the consideration of how it "pays" should be the guiding motives in imparting or acquiring it. If a young capacity for enthusiasm and faculty of admiration are being trained and exercised, the learner is undergoing real preparation for life. The power to reverence and admire what is fine in conduct or noble in thought is at once a spiritual sanative and tonic.

We need to restore something of the old Greek ideal in education—the making of life full and interesting to a free man, not the training of him into a useful tool. This last was the aim of the education of a slave; the other, for the free man, gave command of the things of the spirit. The members of our modern State, no less than the Greeks of old, need such training of capacity. Whole classes of the population, and not alone the dregs, seem to be totally unable to amuse or employ themselves when their recognized work is over; and it is not surprising when we realize the blanks that exist in their mental and spiritual conceptions and the absence of any uplifting thoughts or inspiring ideas which prevails.

Yet we have to our hand the illuminating study of history and literature with which to mould and colour the learner's mind. And this, not only by storing the memory with focused narratives of heroic deeds or fine endeavour, but by shaping the personality with impressions of beauty and courage. It is neither possible nor desirable that all should be remembered. To have felt a throb of desire to do a noble thing, or to endure with fortitude, is to have absorbed an influence which makes for accomplishment. Nor are the spiritual and æsthetic values of the study of history and literature the only ones they possess. More, perhaps, than any other does a knowledge of these two subjects serve to develop a sense of relation and an instinct, of proportion the lack of which not only stultifies but discredits much of our social energy.

Of course, not only right material but also right method is needed, and in this connexion it may be urged that the study of history should be accompanied by that of civics, or citizenship and its duties. This, as much on account of its influence in developing a right attitude as for its actual value. Without knowledge intelligent service is impossible; with no intention of service or sense of interdependence with others, the members of a highly complex society cannot be useful, and may be mischievous.

However varied may be the method, and however various the materials, one clear principle must underlie the surface differences: the learner is to develop power of *expression* as well as to receive *impressions*. And it is a hard saying for some energetic instructors to stand aside and permit the pupil's blundering, faulty endeavours to take the place of the neat second-hand sentiments which our predecessors have evolved. But this faculty of self-expression it is which is essential to happiness; as such it needs fostering and training.

Having awakened interest and stirred enthusiasm there is need to develop next the virtues of intellectual honesty, patience, and humility. It is the quick and superficial learner who is most apt to lack honesty; and more lamentable than the blanks and missing steps in his knowledge is the habit of mind acquired. The windbag is ever with us; let us not in our methods of education connive at its manufacture.

The companion virtue of intellectual patience is apt to be both remote and distasteful to the young learner. It is one of the drawbacks of modern methods of teaching, with their insistent appeal to interest, that there is a growing unwillingness and incapacity to undertake any piece of hard work. The defective grounding of the pupil which ensues is only less disastrous than the impatient habit of mind and lack of grip with which he is ready to confront questions which present any difficulty.

Less common, perhaps, than impatience is the intellectual arrogance of the able learner. It dictates an almost bullying approach to a new idea or a fresh step, and nothing less than resentment at an unforeseen difficulty, as though the subject of study were to blame for some wilful obscurity. This attitude has to be combated, restrained, subdued; for though it may be pardonable enough in youth, in maturity it is intolerable. The most familiar manifestation of the lack of intellectual humility is obstinacy: often, perhaps, produced by wrong treatment. Of the three types of mind—that which welcomes a new idea, that which tolerates a new idea, and that which repels a new idea—the last named is the one which must not be multiplied, in the interests of the race. Yet it has been only too easy to establish conditions in which out of a sheer instinct of self-protection or of boredom, it is created. The *desire to know*—the wholesome, natural curiosity of the child—can be trained and cultivated or be deadened and destroyed.

Much of our educational activity has been expended in tiring young minds beyond recuperation. The pressure of examinations, the ever-increasing range of subjects, the mechanical progression from stage to stage, laid down by external authorities for paper units, combine to rob promising intelligences of all vigour and elasticity. This "staleness" is lamented by the heads of schools who send on their pupils to the Universities, and by the heads of colleges who receive them. It augurs ill for their future value as spirited citizens, and accounts for the inglorious choice of security rather than enterprise which characterizes the capable youth of the day.

But quite as bad as to over-tire the young mind is it to cramp and depress it. It is too fatally easy to quench the *desire to know* with bald irrelevancies and immature certainties, and thereafter further advance is hardly possible. Facts taught without any sense of relation, without atmosphere, and with finality—such an intellectual burden makes only for the dulling of perceptions and the deadening of capacity. A consciousness of the whole beyond the part discussed, a right attitude and sympathetic enthusiasm vivify and energize conceptions by which we *live*.

SUSAN CUNNINGTON.

SOME ASPECTS OF CONVENT EDUCATION.

THERE was a time when the education carried on in Roman Catholic convent schools was regarded as cheap, showy, and superficial. Other schools, public and private, which underwent inspection, published annual reports, and reaped a solid harvest of distinctions, were conscious that a high standard, well maintained, and a staff of most highly qualified assistants, placed them above competition with the convent schools, where fees were lower and nuns were the teachers. They did not count for much. This could hardly be said at present.

If we classify the various London schools into high schools, Church schools, county schools, and private schools, our classification is incomplete if we do not add convent schools. Many convents add teaching to their work, regarding it as one of the greatest spheres of missionary effort. One Order at least, which has world-wide ramifications, has been established with this aim as its object of existence.

It would be a mistake to underrate the work that these schools do. They have come into the field to compete with other schools not of their communion, and to prove themselves equally capable to tackle the educational problem. They study closely what other schools do, and strive in activity and general efficiency not to fall behind them. If the convent school is to hold its own it must be well equipped, well staffed, up to date in every particular.

To begin with, it starts with certain advantages. The teaching is a definite religious work, in organic connexion with a great religious body. Behind the nun is her superior; behind the convent is the Church. The work is carried on by

a devoted body of unsalaried workers, with a singleness of aim hardly to be equalled in the outside world. The nun is the obedient and self-effacing instrument in the hands of a higher authority with absolute responsibility. To fit her better for her work she receives a careful training. No effort, no money (if that is necessary) is spared. If she must go into the world for her work's sake, even after her training has ceased and she is bound by her vows not to leave the convent enclosure, permission is given her to go and gather honey where other teachers seek it. Few indeed are the classes for teachers in London in which nuns are not present, eager, zealous and enthusiastic learners.

The staff, of which the nun forms one, is highly qualified for its work. In many cases it numbers graduates in arts and science. The nun in the convent school is often a clever and cultivated woman, absolutely devoted to her work. Her life is given to it. For it she has left the world. She receives no payment. No personal ambitions, no side issues, or the competition of the world, turn her aside into other channels of interest. Her best is given as a matter of religion. It is true that, compared with the teacher in the world, she leads a more restricted life, and has a narrower horizon; but her interest, her work, gains in intensity. The spirit of the convent is that of untiring and unceasing concentration upon the child.

The convent school will vary in its completeness and resources according to the locality and the state of its finances. The economic factor of having no highly paid and expensive staff often enables the school to be run at a lower cost than others in the same neighbourhood, and in its equipment and furnishing it will be found quite equal to those with which it competes. The best schools show classrooms designed after the most modern requirements, and the apparatus and stock will be of the newest and most scientific kind obtainable. There are plenty of books of every kind, comprising books of handy reference in the classroom, others to be lent out to the pupils; and often, in addition to these, the convent possesses a large library containing works upon all the subjects taught, and a fine collection of general literature, to which constant additions are made. Newspapers and illustrated magazines are by no means banned, and the resources of the available free libraries are used to the full. The classrooms are cheerful, with good pictures and flowers. Anything that may help in the interest of the lessons, or in the pride and pleasure which children feel in their own room, is sure to be found. The teaching of science will be done in a properly fitted laboratory, and outdoor work plays its part in rambles and excursions—historical, geographical, or botanical. The nuns themselves at times receive permission to visit other schools, and to watch, if possible, the work of some well known teacher.

Visits are paid to the schools by the inspectors, which means that, if the report of the work is to be satisfactory, it must be up to a good standard. If it should be adverse upon any subject, every effort is made to strengthen it. Special teachers will be engaged from outside either to coach the nuns in the weak subject or to undertake it with the pupils. They will be given a free hand and helped in every way. Any deficiency in apparatus and material will be remedied. Such a case, however, only arises of necessity. Underlying all the good and able work of the nuns is the religious motive, and it can hardly be supposed that any branch of study is handed over to an outsider with any real satisfaction in what implies, however good, secular work.

The tone in the convent school strikes a very happy note. The nuns are devoted to the children and the children to the nuns. Under the gentle influence of the Sisters the manners of the pupils become gentle and refined. They are kept busy and interested, and their bodily training is looked after by skilled nuns, as well as their mental development. A due respect for authority is faithfully instilled and they are carefully guarded and guided. It is here that the real contrast lies with other schools. Perhaps the pupils strike one as too much in leading strings, in this differing so much from the average high-school girl. Initiative is weak, and a sense of dependence upon the teacher, who herself depends on

authority behind, does not make for strength. Individuality is less strong and intellectual activity less eager.

The nuns themselves are clever, cheerful, even gay and amusing; happy in their work, leading lives so busy that they can hardly crowd all their school duties into the day. They are in closer touch with the outside world than one would think. If, as is the case with one very widely spread Order, it is a missionary and teaching body, the nuns actually see more of the world than some teachers. In this Order it is a frequent custom to send the Sisters from place to place. The nun-teacher is sent first to Paris, where she undergoes training for two years, after which she is appointed to a definite convent. She may remain here for a shorter or longer period, and be later sent to any other part of the world at the discretion of her superiors. Nuns of many nationalities, who have been in convents in different corners of the world, are collected under the same roof. Inscrutable are the motives of those in authority! The nun is vowed to obedience, but such partings must involve much painful feeling, for the affection that binds those who live so intimately together is often a very close one. No doubt the change of scene and people is ultimately for the good of the nun, and her work must certainly benefit from variety of experience.

In every way, in whatever aspect we consider them, the convent schools can show that, whether in methods or equipment, or qualifications, not to speak of the absolute devotion with which the work is done, they fall little, if at all, behind the schools avowedly secular, or those which belong to other religious bodies. Certain faults they possess which are not found in the public day-schools; but in their aim, their whole-hearted devotion to the work of education, their competition with schools not of their creed, their careful study of the means to success, and the strong influence they exercise over their pupils, they form a section of the educational world that other schools must admire but cannot afford to ignore.

E. C. MATTHEWS.

DIRECTORY OF EDUCATIONAL ASSOCIATIONS.

[This List is Copyright. Reproduction is forbidden.]

THE object is stated only when this is not obvious from the title or not known by general repute. The following number (a) gives the membership total, (b) the yearly subscription, (c) the Society's organ, (d) telegraphic address, (e) telephone number, (f) date and place of next annual meeting, (g) secretary's name and office address.

The following no longer appear in the list:—The Agenda Club, formerly described as "An association of men and women undertaking or anxious to promote voluntary service for the benefit of the community, and to inspire others with a similar spirit"; The Ulster Schoolmistresses' Association, which has come to an end; The Students' Aid Society, Ltd., of which the Secretary reports: "This Society does not assist in any other way than by advancing loans, and this it has ceased to do."

Amongst additions may be noted: The Association for the Reform of Latin Teaching, The Home Music-Study Union, The Educational Colonies and Self-supporting Schools Association; The Eugenic Club; The Association for Securing Higher Education in Rural Schools; The School Dentists' Society; The Association of Science Teachers; The Students' Careers Association.

We have retained the address of the Charity Commission, in spite of the kindly hint of the Secretary that it "can hardly be called an 'Educational Association.'" The jurisdiction of the Commissioners over educational Charities was transferred to the Board of Education by the Board of Education Act, 1899, and the Orders in Council made thereunder."

Diligent research has failed to discover the present addresses of The Empire Educational League, The Indian

Students' Aid Committee, and the Association of Municipal Corporations.

We owe our best thanks to Secretaries for their promptitude in correcting slips. No reply came to hand from the Societies marked*.

Aberdeen County Schoolmasters' Association.

80. 1s. To promote interests of secondary education in rural districts. Mr. M. G. Gerrard, M.A., F.E.I.S., Bucksburn.

Academy, The British.

For the promotion of Historical, Philosophical, and Philological Studies. Maximum number of Fellows, 100. Prof. I. Gollancz, The British Academy, Burlington House, London, W.

Adult School Union, National.

A Federation of 31 County Unions, comprising nearly 2,000 schools, with about 100,000 members. The movement was started in 1845 by the Society of Friends, but the wider extension dates from 1899, since which year many new schools have been established annually. The movement is democratic, non-party, and unsectarian. Head-quarters, 1 Central Buildings, Tothill Street, Westminster, S.W. (c) *One and All*. (d) Aduscolun Vic, London. (e) Regent 2400. (f) Feb. 1915, London.

Agriculture and Technical Instruction [Ireland], Department of.

Mr. T. P. Gill, 4 Upper Merrion Street, Dublin. (c) *Journal* of the Department. (d) Resources, Dublin. (e) 1223 and 1224 Dublin.

Agriculture, Scottish Teachers of, Incorporated Institute of.

2s. 6d. Mr. J. Wilson Sinton, F.E.I.S., F.S.Sc. (Lond.), F.S.T.A., Dalmeny, N.B.

Allgemeiner Deutscher Sprachverein.

A literary association to promote the study of pure German. 28, 130. Zweigverein, London. 628. 5s. Hon. Secretary, Mr. Max Sylge, 26 Sun Street, London, E.C.

Alliance Française pour la propagation de la langue française.

186 Boulevard Saint Germain, Paris. Federation of the British Branches, President Prof. A. V. Salmon, 54 Western Elms Avenue, Reading. Hon. Secretary, Mr. F. Novion, 2 High Street, Croydon. 125 societies affiliated. Subscription 6s. to 10s.

Animals, Royal Society for Prevention of Cruelty to.

E. G. Fairholme, Chief Secretary, 105 Jermyn Street, S.W.

Anthropological Institute, Royal.

50s. £2. 2s. Mr. T. C. Hodson, 50 Great Russell Street, W.C.

Archæological Institute, Royal.

550. £1. 1s. Mr. G. Hardinge-Tyler, M.A., F.S.A., 19 Bloomsbury Square, W.C.

Aristotelian Society.

For the systematic study of Philosophy. 109. £1. 1s. Dr. H. Wildon Carr, 10 Mores Garden, Chelsea, S.W. (c) *Proceedings*. (f) July 13. 22 Albemarle Street, W.

Army School Appointments.

Address A.A.G., Army Schools, War Office, Whitehall, S.W.

Art for Schools Association.

700. Subscription £1. 1s. or 10s. 6d. Miss M. L. Cooper, The Settlement, Tavistock Place, London, W.C. (d) *Arfarschol Eusquare*, London. (e) Central 723.

Art Masters, The National Society of.

380. £1. 1s. Mr. Francis C. Ford, M.A., 12 Stanwick Road, West Kensington, W. (c) *Own Journal*. (f) July-August 1914.

Arts, Royal Society of.

£2. 2s. Sir H. Trueman Wood, 18 John Street, Adelphi, W.C. The Society conducts annual examinations at about 500 centres in the United Kingdom in commercial subjects and music. There are also *viva voce* examinations in modern languages. (c) *Own Journal*. (d) Praxiteles Westrand, London. (e) 5610 Gerrard.

Art Teachers' Guild.

250. For those interested in the teaching of art in schools. 5s. Miss Ethel M. Spiller, 11 Highbury Crescent, London, N. (c) *Art Teachers' Guild Record*. (f) Jan. 1915.

Assistant Masters, Incorporated Association of.

Masters in Secondary Schools, both public and private. 5,000. 10s. 6d. Mr. J. G. Lamb, M.A., 35 John Street, Bedford Row, W.C. (c) *The A.M.A.* (d) Incorama Holb, London. (e) City 608. (f) Jan. 1915.

Assistant Mistresses in Public Secondary Schools, Incorporated Association of.

5s. Miss K. Andrews, 30A Clanricarde Gardens, Notting Hill Gate, W. (f) June 1914. Wyggeston Girls' School, Leicester.

Associated Board of the Royal Academy of Music and the Royal College of Music.

Holds Local Examinations in Music. Mr. James Muir, 15 Bedford Square, London, W.C. (d) *Associa*, London. (e) Gerrard 7356. (f) July 1914.

Association of Secondary Teachers, Ireland.*

The improvement of Secondary education. 400. Men, 10s.; women, 2s. 6d. Mr. P. F. Condon, 55 Haddington Road, Dublin.

Authors, Incorporated Society of.

Objects: to maintain the rights of creators of copyright property. 2,500. Annual subscription £1. 1s. Life membership £10. 10s. Mr. G. Herbert Thring, 1 Central Buildings, Tothill Street, Westminster, S.W. (c) *The Author*. (d) Autoridad, London. (e) 374 Victoria.

Biblical Archaeology, Society of.

£1. 1s. Mr. W. L. Nash, F.S.A., 37 Great Russell Street, W.C.

Birmingham Council and Voluntary Schools Head Teachers' Association.

330. 5s. Mr. J. G. Forrester, Tindal Street School, Balsall Heath, Birmingham.

Blind, Home Teaching Society for the.

To give free instruction to the blind in the art of reading by touch, and to lend books in embossed types gratuitously. Miss M. A. Gilbert, 25 Victoria Street, S.W. (f) March 18, 1914, at 34 Portland Place, London.

Blind to Read, London Society for Teaching the.

Mr. Thomas H. Martin, 100 Avenue Road, Hampstead, N.W.

Board of Education Library. Open daily 10 a.m. to 5 p.m. (Saturday to 2 p.m.).

Board of Education, King Charles Street, Whitehall, S.W.

Board of Examinations for Educational Handwork.

Recognized by Board of Education. Mr. Herbert Stubbs, Office of the Froebel Society, 4 Bloomsbury Square, W.C.

Board of National Education in Ireland.

The Secretaries, National Education Office, Marlborough Street, Dublin.

Botanic Society, Royal.

Mr. J. Bryant Sowerby, Regent's Park, N.W.

British Association for the Advancement of Science.

3,500. Life members, £10; members, £2 first year, £1 succeeding years; associates for one meeting, £1. Mr. O. J. R. Howarth, Burlington House, W. The Association meets in Australia in August 1914, and in Manchester in 1915. (c) *Own Annual Report*. (d) Igdrasil Piccy, London. (e) Mayfair 2224. (f) Australia, August 1914; in Manchester 1915.

British and Foreign School Society.

Mr. W. Prydderch Williams, 114-116 Temple Chambers, Temple Avenue, E.C. Subscription, Life Governors, £10. 10s.; Annual Members, £1. 1s. (c) *Educational Record*. (e) 7969 Central. (f) May 1914.

Burgh and Parochial Schoolmasters' Association.

63. Mr. William Young, F.E.I.S., Dalkeith, N.B.

Catholic Head Masters' Association (Ireland).

Raised in 1901 for the purpose of lending fees for training to gentlewomen who must earn their own living. No interest charged. No money lent as capital. Hon. Secretary, Mrs. B. P. Scattergood, Moorside, Far Headingley, Leeds.

AN attractive Easter Vacation Meeting for the study of Regional Survey at Edinburgh has been arranged. Prof. Patrick Geddes will deliver the opening address on Monday, April 13. For each day during the fortnight there is an excursion or visit, followed by a meeting or lecture, and on Saturday the 25th a general conference.

STATISTICS collected from graduates of Holyoake College give some remarkable figures as to the effects of higher education on the marriage and maternity of women. For students who graduated between 1842-9 the percentage of spinsters was 15, and of wives or widows 85. For 1900-9 the corresponding figures were 76 and 24. Of the married women 39 per cent. are childless, and the average number of children to a family is 1.5.

At the School Nature Study Union Meeting, at the Conference of Educational Associations, Miss M. R. N. Holmer spoke on "The Uses of an Outdoor Tank," and showed how great a variety of animals and plants, of all sizes and of all degrees of complexity, could by its use be obtained for nature work, which is so often handicapped by the difficulty of obtaining suitable material. The tank supplies excited joy and wonder in little children, who watched the darting movements of tadpoles and sticklebacks and made coloured pictures of the water musk and forget-me-not which grew in the "marsh," an earth-filled old hamper. For training college the tank was almost an essential part of the apparatus.

FROM

HORACE MARSHALL & SON'S LIST

A Cheap and Useful Series.

THE CARMELITE CLASSICS.

This series aims at providing Standard English Texts at a low price, of attractive appearance, and containing a minimum of editorial matter. Such notes as occur refer only to such matters as pupils of school age could not be expected to know or to think out for themselves, and quotations from Greek or Latin authors are given in standard English translations. The series is now published in limp cloth at 4d., and in cloth boards at 8d., 1s., and 1s. 4d.

Chaucer. Prologue to the Canterbury Tales. 8d.
Chaucer. The Nun's Priest's Tale. 4d.
The Prologue to Piers Plowman. 4d.
Marlowe. Dr. Faustus. 8d.
Milton. L'Allegro and Il Penseroso. 4d.
Milton. Comus. 8d.
Milton. Samson Agonistes. 8d.
Milton. Lycidas and the Sonnets. 4d.
Goldsmith. The Traveller and Retaliation. 4d.
Goldsmith. The Deserted Village. 4d.
Gray. Elegy and Odes. 4d.
Shelley. Adonais. 4d.
Coleridge. The Ancient Mariner. 4d.
Macaulay. Lays of Ancient Rome. 8d.

Macaulay. Life of Goldsmith. 4d.
Macaulay. Life of Johnson. 8d.
Spenser. Faerie Queene. Book I. 1s. 4d.
Scott. Lay of the Last Minstrel. 1s.
Scott. Marmion. 1s.
Scott. The Lady of the Lake. 1s.
Shakespeare. Henry IV. Part II. 1s.

Illustrations of English Literature. A series of volumes giving extracts from the writings of Great Authors, arranged chronologically. 175 to 200 pp. 1s. 4d. each.

The following are now ready:—
From Wyatt to Webster.
From Herrick to Dryden.
From Defoe to Burns.
From Crabbe to Beddoes.
From Carlyle to Stevenson.

A FIRST BOOK IN ENGLISH LITERATURE.

By C. L. THOMSON.

Cloth, fully illustrated.

- | | |
|---|---|
| <p>I.—To Wycliffe and Langland. 2s.
II.—From Langland to Lyndsay. 2s.
III.—From Lyndsay to Bacon. 2s. 6d.</p> | <p>IV.—Beaumont and Fletcher to Dryden. 2s. 6d.
V.—From Pope to Burns. 2s. 6d.
VI.—From Wordsworth to Tennyson. 2s. 6d.</p> |
|---|---|

The Guardian says:—"The work has been admirably done. . . . The style is simple, direct, and eminently readable, and the grouping exceedingly good; while the interest is greatly enhanced by the clever selection of illustrations, generally from contemporary prints."

ENGLISH: A MODERN GRAMMAR.

By G. H. CLARKE, M.A., and G. T. UNGOED, M.A., of the County School, Acton.

This work is an attempt to embody the results of recent studies in the grammar of modern English. The work is arranged in three Parts. Part I outlines the ground to be covered, indicates the method of treatment, and illustrates the terminology adopted, which is largely that of the Joint Committee on Grammatical Terminology. Part II is in the main a detailed study of the "forms" of the word. Part III returns to the study of the sentence—its growth and structure. 2s. 6d.

SIX PROSE TEXTS FOR JUNIOR FORMS.

Edited by C. L. THOMSON.

The Pilgrim's Progress.

Gulliver's Travels.

Legends of Early Scotland.

(From Sir Walter Scott's "Tales of a Grandfather.")

Legends of Early England.

(Chiefly from Freeman's "Old English History.")

Sir Roger de Coverley.

Legends of Early Rome.

(From Arnold's "History of Rome.")

Prose texts for study in the first two years of a Secondary School course. Abridged but not rewritten, and suitable to pupils of from twelve to fourteen years of age. 8d. each.

THE JOURNAL OF ENGLISH STUDIES.

Jan.—May, 1914. Now Ready. 1s. net.

BLACKIE'S**NEW LIST**

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

A LIBRARY OF ENGLISH PROSE.

Edited by W. H. D. ROUSE, Litt.D., Head Master of the Perse Grammar School, Cambridge. Cloth boards, 10d. each.

The present collection is issued in response to a demand that has been growing for English texts worthily produced in permanent binding while still at a cheap price: books that may form the nucleus of a library of English literature, to expand as the reader's knowledge and taste develop. In order to make the series representative, portions from larger works are given, as well as shorter complete texts.

Boswell—*The Journal of a Tour to the Hebrides with Samuel Johnson.*

MADAME

**BERGMAN ÖSTERBERG'S
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT,
FOR RESIDENT STUDENTS.**

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education. The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers.

Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

**BERGMAN ÖSTERBERG'S

EDUCATION AND THE NEW UTILITARIANISM, and other Educational Addresses.By **ALEXANDER DARROOH, M.A.**, Professor of Education in the University of Edinburgh.

EARLY IN APRIL. Crown 8vo, 5s. net.

EDUCATION AND PSYCHOLOGY.By **MICHAEL WEST**, India Education Service.

SECOND IMPRESSION. THIRD THOUSAND. 4s. 6d. net.

INTRODUCTION TO EXPERIMENTAL EDUCATION.By **ROBERT R. RUSK, M.A. (Glasg.), B.A. (Cantab.), Ph.D. (Jena).**

This work seeks to make accessible, in convenient form for English readers, the main results of investigations in the new subject of Experimental Education. It is based on E. MEUMANN'S "Vorlesungen zur Einführung in die experimentelle Pädagogik." The material available since the first publication of Meumann's work has been incorporated, and emphasis has throughout been laid on the results of English investigations.

Educational Times.—"Here is a book that deserves a cordial welcome from everyone who has a real interest in education."

The Journal of Education.—"It will be found extremely attractive to all those who have any real interest in education. It is the only book in English that gives a systematic account of the whole field of experimental pedagogy. It is thoroughly well suited to serve as a textbook, while its copious references to English and foreign literature on the subject make it invaluable to the advanced student."

Irish Journal of Education.—"Dr. Rusk's book, small in price, but exceedingly complete, should find a large sale among teachers really interested in their profession."

Educational Handwork.—"This is a book which one can only criticize with praise. It is excellent in every way, and should be in the hands of all teachers."

Educational News.—"A study of this volume will bring fresh light upon the science of education. It is an attempt—and a good one—to place in review the result of experiments in the new subject of experimental education."

Journal of Educational Psychology (Baltimore, N.J.).—"This is a book which has been much needed in English. Based on Meumann's 'Vorlesungen zur Einführung in die experimentelle Pädagogik,' it condenses that writer's lengthy discussions into a brief compass, and focusses attention upon the work of English and American investigators in this field. We bespeak for the book a wide adoption as a text in college classes in education."

Journal of Experimental Education.—"Dr. Rusk is to be congratulated upon a book well fitted to introduce a wide circle of readers to researches which, however their present results be estimated, are undoubtedly destined to affect profoundly the organisation and practice of education."

RECENTLY PUBLISHED. Crown 8vo, 4s. 6d.

THE MENTAL AND PHYSICAL LIFE OF SCHOOL CHILDREN.By **PETER SANDIFORD, M.Sc. (Manchester), Ph.D. (Columbia)**, Professor of Education in the University of Toronto, formerly Lecturer on Education in the University of Manchester.

School World.—"A very painstaking piece of work, more comprehensive in its scope, and more 'up to date' in its information than any similar English treatise with which we are acquainted."

Secondary Education.—"Dr. Sandiford has produced a work full of information and of reflective thought."

London Teacher.—"To the best of our knowledge, no other volume, which has yet appeared in England, has attempted to deal within the same covers with the connexion between the child's mental and physical development. It is undoubtedly an extremely valuable handbook for teachers."

THE DAWN OF CHARACTER: A STUDY OF CHILD LIFE.By **EDITH E. READ MUMFORD, M.A.**, Lecturer on "Child Training" at the Princess Christian Training College for Nurses, Manchester.**LONGMANS, GREEN, & CO., 39 Paternoster Row, London, E.C.**

"There is an absolute necessity for advertising; there is a great eagerness to compete for attention, and no one gets it unless it is by giving, as it were, so many strokes of the hammer, one after the other, to compel people to notice what is going on."—W. E. GLADSTONE.

PATON'S List of Schools and Tutors.

AN AID TO PARENTS IN THE SELECTION OF SCHOOLS.

1216 pages, crown 8vo. Red Cloth, 2s.; post free, 2s. 6d.

THIS BOOK secures for its advertisers a far larger proportion of *definite results* than any other publication of its kind.

LONDON,
13.10.1913.

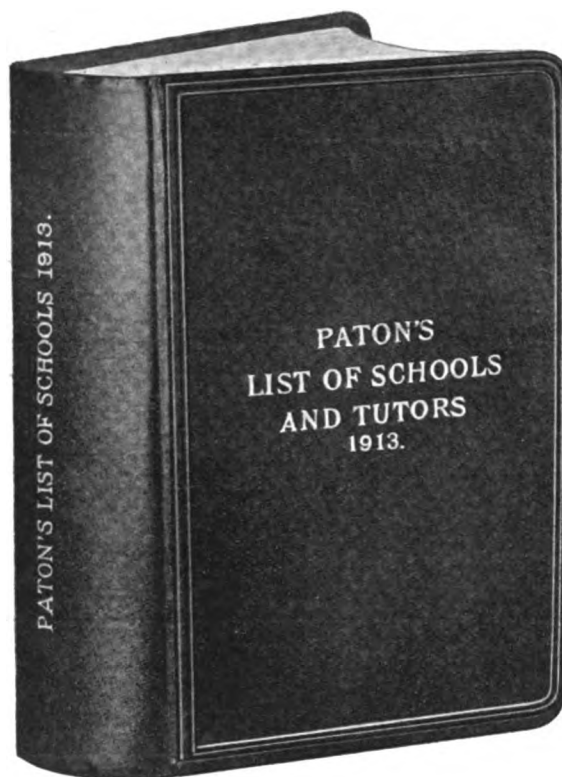

"I have sent my little boy to — School. He is very happy there, and well looked after, and I am very pleased with everything I saw there. Many thanks for the great *assistance* you were to me."

HAMPSTEAD,
2.10.1913.

"We have to thank you very much for your courteous assistance in placing D—. It is just the school she required, and we feel we were fortunate to have had the benefit of your knowledge in the matter. Next year we shall be sending our younger daughter to school, and shall certainly seek your advice again."

"The majority of my boys come, of course, from personal recommendation, but I may say that of those who come as a result of advertising, practically all have heard of the School through your List of Schools."

"I advertise in your book because I have found it of great use to me, and the best possible way of making the School known."

COLCHESTER,
13.9.1913.

"I am extremely obliged to you for the great help you were to us, and for sending us such a splendid selection of schools, and shall most highly recommend your Agency to any parents requiring schools, for with your help it is no trouble at all."

MANCHESTER,
14.7.1913.

"I cannot thank you enough for your help in finding me a suitable school. I am exceedingly pleased with — School in every way."

"I consider that your book fills an awkward gap, especially in cases where Schools do not go in for general advertising."

"I have recommended my Governors to continue our advertisement in your book because it appears to be a useful medium for bringing this School before a large number of people whom it would be impossible to reach personally."

The SEVENTEENTH Annual issue is now being prepared for Press.

A SPECIMEN COPY, with full particulars and definite proof of value to clients, will be forwarded to Head Masters or Head Mistresses on application to

ASSISTANT MASTERS.

Messrs. J. & J. PATON beg to inform Head Masters that they have opened a
NEW DEPARTMENT for the introduction of ASSISTANT MASTERS.
Below are particulars of a few Masters who are disengaged for Easter Term.

ONLY THOSE ASSISTANTS WHOSE REFERENCES HAVE BEEN
PROVED TO BE SATISFACTORY ARE RECOMMENDED TO PRINCIPALS.

MATHEMATICS AND SCIENCE.

- £160, non-res.; M.Sc. (Liverpool). Physics, Maths., with French and general Form subjects. Games and Drill. Age 27½.—No. 64.
£60, res.; B.Sc. (London). Maths. and Science, with French and Drawing. Games and Drill. Age 21.—No. 84.
£110, res.; B.A. (Oxford). Maths., with ordinary Form subjects. Games. Age 28.—No. 211.

CLASSICS.

- £100, res.; M.A. (Oxford). Latin and Greek, thorough French and English, Elementary Maths. Age 32.—No. 73.
£120, res.; M.A. (Oxford), Hons. Classics. Latin, Greek, English, Modern Languages, and Commercial subjects. Games and Drill. Age 38.—No. 321.
£60, res.; B.A. (Wales), Hons. Classics, with English, Form subjects, and French. Age 36.—No. 198.

MODERN LANGUAGES.

- £120, non-res.; B. ès L. French and German, good English. Military Drill. Age 32.—No. 81.
£60, res.; French, German, and Drill. Good experience. Age 25.—No. 91.
£72, non-res.; B. ès L. French and German. Age 30.—No. 222.

ENGLISH.

- £75, res.; English Literature, with French and ordinary Form subjects. Good Drawing. Games and Drill. Age 20.—No. 421.
£80, res.; B.A. (Oxford), Hons. English, subsidiary Maths., French, and German. O.T.C. and Games. Age 26.—No. 395.
£150, res.; B.A. (Cambridge). English, with ordinary Form subjects. Good Games. Age 24.—No. 342.

MUSIC AND ART.

- £100, res.; F.R.C.O. Piano, Organ, Singing, Choir Training. Good Games. Age 31. No. 274.
£160, non-res.; Royal College of Arts. All Art work connected with the school. Age 35.—No. 186.
£80, res.; Drawing, Painting, Woodwork, Metal Work. Honours in Design. Games and Drill. Age 24.—No. 352.

COMMERCIAL SUBJECTS.

- £150, non-res.; Shorthand, Book-keeping, and all Commercial subjects. Office routine. Age 27.—No. 354.
£100, non-res.; Shorthand, Book-keeping, and Typewriting. Age 22.—No. 353.
£90, res.; Shorthand, Book-keeping, and General Form subjects. Age 28. No. 351.

Assistant Masters requiring posts should send in particulars as early as possible. There is no preliminary fee.

Telephone—
5053 Central.

OXFORD AND CAMBRIDGE LOCALS

Junior and Preliminary.

Arithmetic.

- JUNIOR ARITHMETIC.** By R. H. CHOPE, B.A., Mathematical Master at Kingswood School, Bath. 2s. 6d.
- TEST QUESTIONS IN JUNIOR ARITHMETIC.** 1s. With Answers, 1s. 3d.
- PRELIMINARY ARITHMETIC.** By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 1s. 6d. With Answers, 1s. 9d.

Religious Knowledge.

- ACTS OF THE APOSTLES, PART I, CH. 1-16; PART II, CH. 13-28.** By Rev. W. H. FLECKER, M.A., D.C.L., 1s. 6d. each. In one Volume, 2s. 6d.
- GOSPEL OF ST. LUKE.** By Rev. T. WALKER, M.A., and Rev. J. F. RICHARDS, M.A. 1s. 6d.
- GOSPEL OF ST. LUKE (PRELIM. EDITION).** By Rev. T. WALKER, M.A., and Rev. J. F. RICHARDS, M.A. 1s.
- GOSPEL OF ST. MATTHEW.** By Rev. T. WALKER, M.A., and J. W. SHUKER, M.A. 1s. 6d.
- GOSPEL OF ST. MATTHEW (PRELIM. EDITION).** By Rev. T. WALKER, M.A. 1s.

English Language and Literature.

- JUNIOR COURSE OF ENGLISH COMPOSITION.** By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.
- JUNIOR ENGLISH GRAMMAR WITH PARSING AND ANALYSIS.** By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. 1s. 6d.
- PRELIMINARY ENGLISH COURSE.** By A. M. WALMSLEY, M.A. 1s. 6d.
- SPELLING AND PUNCTUATION (WITH PIECES FOR DICTATION).** By H. SHOOSMITH, M.A. 8d.

History and Geography.

- SCHOOL HISTORY OF ENGLAND.** By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d. Also in three parts as follows:—I, To 1603; II, 1485 to 1714; and III, 1660 to 1910. 1s. 6d. each.
- PRELIMINARY HISTORY OF ENGLAND.** By M. K. ELLIOTT (Girton College, Cambridge), and M. S. ELLIOTT, B.A. 2s.
- JUNIOR GEOGRAPHY, 1914, 1915.** Including Outlines of Physical Geography, the British Isles, and Europe. By G. C. FRY, M.Sc. 2s.
- Also Great Britain and Ireland, with Outlines of Physical Geography. 1s. 6d. Asia, North America, Australasia, with Africa. 8d. each.
- PRELIMINARY GEOGRAPHY.** By E. G. HODGKISON, B.A. 1s. 6d.

Latin.

- NEW JUNIOR LATIN COURSE.** By J. V. THOMPSON, M.A., late Senior Classical Master, Strand School, and LL. M. PENN, M.A., Classical Master at Beckenham County School. 3s. 6d.
- NEW JUNIOR LATIN READER.** By A. J. TATE, M.A., Assistant Classical Master, Owen's School, Islington. 2s.

French.

- NEW JUNIOR FRENCH COURSE.** By G. A. ROBERTS, M.A., Senior Modern Language Master, Royal Masonic School, Bushey. 2s. 6d.
- NEW JUNIOR FRENCH READER.** By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. With Notes and Vocabulary, 2s.
- PRELIMINARY FRENCH COURSE.** By H. J. CHAYTOR, M.A., and H. E. TRUELOVE, B.A. 1s. 6d.
- ERCKMANN-CHATRIAN: LE BLOCUS, CH. 1-13.** Edited by R. F. JAMES, B.A., Modern Language Master, Wellingborough Grammar School. 1s. 6d.
- [For Cambridge, 1914.]

Mathematics.

- JUNIOR GEOMETRY.** By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.
- TEXTBOOK OF ALGEBRA. PART I. JUNIOR.** By RUPERT DEAKIN, M.A., late Head Master of Stourbridge Grammar School. 3s.
- JUNIOR TRIGONOMETRY.** By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. 2s. 6d.
- JUNIOR MECHANICS.** By F. ROSENBERG, M.A., B.Sc. Fifth Edition. 2s. 6d.

Science.

- JUNIOR CHEMISTRY.** By R. H. ADIE, M.A., B.Sc., Lecturer in Chemistry, St. John's College, Cambridge. 2s. 6d.
- JUNIOR PRACTICAL CHEMISTRY.** By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 1s.
- PRELIMINARY CHEMISTRY.** By H. W. BAUSOR, M.A. 1s. 6d.
- JUNIOR EXPERIMENTAL SCIENCE.** By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. 2s. 6d.
- JUNIOR HEAT.** By JOHN SATTERLY, D.Sc., M.A. 2s.
- FIRST STAGE HYGIENE.** By R. A. LYSTER, M.D., B.Sc., D.P.H. 2s.
- JUNIOR MAGNETISM AND ELECTRICITY.** By R. H. JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 2s. 6d.
- PLANT BIOLOGY.** By F. CAVERS, D.Sc., F.L.S. 3s. 6d.
- JUNIOR SOUND AND LIGHT.** By JOHN SATTERLY, D.Sc., M.A. 2s. 6d.

OCCASIONAL NOTES.

THE Teachers' Register is a going concern, and, like Virgil's Fame, it gains momentum as it goes. The applications received up to March 24 are approximately 1,840, and for the last day or two they have been coming in at the rate of fifty a day. The number so far approved by the Council is a thousand. Applicants should be prepared for some delay in receiving their certificates, as till precedents are settled the particular form of entry on the Register involves many troublesome points of detail. A circular has been authorized by the Executive of the N.U.T. recommending its members to join; but the entries, as far as they have gone, lend no colour to the anticipation that the most numerous class of teachers would swamp the rest. This is an important fact, as we must all look forward to the time when the Registration Council will be elected directly by the registered teachers, and not, as now, indirectly through Associations. The period of operation of the alternative conditions has been extended from December 31, 1918, to December 31, 1920. This extension was granted in order to meet the somewhat hard case of intending teachers who are now in the final or pre-final year of their University course, and so could not put in the requisite five years of teaching. The Council, as we anticipated, has met the difficult case of women students who have passed the final schools at Oxford or Cambridge without taking the previous University examination required for the B.A. degree, by shifting the onus on to the shoulders of the Universities. The altered clause in the appendix to the conditions now reads: "A certificate of having passed the final degree examina-

tion of any Universities approved by the Council for the purpose of Registration, under such conditions as to courses of study and preliminary examinations as may be accepted for the time being by such University."

REPRESENTATIVES of over thirty societies attended the meeting of March 7 convened by the Council of the Teachers' Guild. The meeting was purely deliberative, and no resolutions were proposed. But the constitution and conditions of the new society and its relation to the Guild were fully discussed, and it is hoped that at the adjourned meeting to be held on May 9 delegates will come prepared to pledge their respective Associations to support the project. The main objections raised were three:—(1) If it were a learned society it could not admit all and sundry who are interested in education; (2) if it is to attract teachers in any numbers the subscription of a guinea is prohibitive; (3) teachers have not the time to attend more meetings, and the Teachers' Guild is already, however imperfectly, by its psychological committee doing the work of research, and needs only strengthening and development. We shall not attempt to answer these objections categorically, but would only point out that the monetary objection may be met by the proposed lump subscription for each Association, and that the Teachers' Guild could not attempt the expense of Proceedings and a yearly Bulletin without external support. Also it is hoped that, at the May meeting, the Guild may be able to announce the acquisition of new and suitable premises in Russell Square.

ON the whole, opinions were not favourable to the idea of founding a new association. There was, however, a good deal of evidence of a desire for more united action among teachers. The need for some organization for expressing to the authorities the considered opinions of the general body of teachers was dwelt upon, and such need must be obvious to everyone. The subject of training in schools, for instance, has now come to the front. Are teachers content to leave it to be discussed by head masters and head mistresses only? or is each of the numerous pedagogic associations to send in a memorandum on training from its own particular point of view, and leave the harassed officials at Whitehall to collate them? Then there is the whole subject of the formation of character, including moral instruction. That cannot be dealt with merely by an association existing for the purpose; it is the business of every teacher in the country, and progress can be made only if every teacher takes an interest in it. If we are not to have a Society of Education, we must have some other machinery for collecting and expressing the view of the general body. Perhaps some development of the Committee of the Conference Week in this direction might be possible.

CONTINUATION schools are in the air, and we may confidently expect that the next Government Bill will make provision for a great development of them—to the extent at least of making it incumbent on all Education Authorities to provide facilities for the further education of elementary-school children. Should attendance at such schools be compulsory? This is one of the

questions which arise. Dr. Sadler discussed it in his volume on continuation schools published in 1907, and came to the conclusion that we must aim at ultimately establishing a compulsory system, though it cannot be set up everywhere at the outset. There may be some arguments against compulsion in this matter, but there is one in favour of it which seems to us to be conclusive. Under a voluntary system the hooligans and the idlers—the very people we want to catch—would be left out. Continuation schools, it must be remembered, are rather for the rank and file than for the abler school children. The latter will go on, and in many places now do go on, to secondary, trade, and technical schools. We need not fear that their further education will be hindered by the presence of the stupid and the unwilling. Further, we here must remember that the aims of the continuation schools will be largely disciplinary and social, certainly not merely instructional, and this makes it specially desirable that the rougher element should be got into them.

THERE is another potent reason why attendance at continuation schools should be compulsory. When Dr. Kerschensteiner, the organizer of the Munich system, was asked his opinion about compulsion, he replied that if there were no compulsion many boys and girls, keenly desirous of self-improvement, would be prevented from attending school through the carelessness or greed of their employers. The same calamity would no doubt result in England if attendance were purely voluntary. True, the hours of youthful employes might be regulated by law so that employers could not retain them during school hours, but that would be of little use if they were allowed to spend those hours in the streets.

ONE of the most remarkable features of political history during recent years has been the visits of members of the Government to Germany to study German methods of administration. Mr. Lloyd George went there to learn about Insurance and Lord Haldane to investigate the art of preparing for war. Now Mr. Hobhouse has gone to find out the secret of making a big revenue out of the Post Office, and Mr. Pease to see how continuation schools ought to be managed. And just at the same moment all London has been rushing to Covent Garden to hear "Parsifal." Here are two remarkable phenomena: Cabinet Ministers studying the prose of German administration and the general public stirred by the poetry of German music. Germany is a mighty influence among us; yet we neglect German in our schools. Few of our boys are taught anything about that type of national character and that system of government from which statesmen think that they have much to learn; few girls know anything of the legends, the religious history, and the ethical feeling which went to the making of the Wagner opera; few of our young people learn to know the best that has been thought and said by Germans, even when so many of our more thoughtful men and women turn to Germany for inspiration. Here is a gulf between our schools and contemporary life which surely needs to be bridged.

THE Senate of Liverpool University has recommended that Latin should cease to be obligatory in the Entrance Examination, and the Council has

Compulsory Latin.

referred the recommendation back for further consideration. A writer in the *Liverpool Daily Post* justly remarks that it is curious that the Senate, which is a purely academic body, should be more willing to let Latin go than the Council, which is composed principally of professional and business men. The most remarkable part of his article, however, is not this observation, but his contention that compulsory Latin ought to be retained, because it is a brain-producing subject, and what we may roughly call modern subjects are not brain-producing. "You cannot," he says, "winnow out the big brains from the little ones if you abolish the classical languages, and mathematics, which will be the next to go." We call attention to this because it is the opinion not merely of that rather mythical personage, the man in the street, but of many educated and thoughtful people. Again and again we have observed in discussions about education the idea expressed or implied that classics and mathematics (sometimes science is added) are the only serious subjects of education, the only ones which need severe effort or which develop brain-power, modern languages, history, and others being treated as merely "trimmings." The view of the writer from whom we have quoted is that there is no possible alternative to Latin, considered as an educational instrument. Why does he not look into the question of French and German in the entrance examination and find out whether they could perform the winnowing process, and, if not, how they could be made efficient for that purpose?

BUT is this entirely the fault of the public? Are the present leaders of the modern language movement doing anything to show that French and German can be made to demand the same solid hard work and expenditure of brain tissue as Latin and Greek? Have the exponents of what are called the "advanced" methods ever so much as claimed for those methods that they develop brain and backbone, as classicists claim that the ancient languages develop them? We hear the direct method called interesting, pleasant, natural; has anyone ever called it fortifying or bracing? We hear much about the successful teaching of French as an agreeable and useful accomplishment, but nothing at all about it as an instrument for producing a masculine type of intelligence. So long as the modernist is content to rest his case for modern languages on their usefulness to society, or even on their value as culture, we fear that he will find it difficult to win for them their proper place as part of a liberal education.

THE *Headquarters Gazette* for February reminds us that there are now 140,000 Scouts in the United Kingdom and that the movement has taken root in other countries. Sir Robert Baden-Powell is appealing for £250,000 to endow his movement, and we hope that he will get it. Fine as is the work of our elementary schools, little as it deserves to be denigrated, it is necessarily one-sided, and scouting is one of its indispensable complements. It teaches the working man's son what Tom Brown learns almost unconsciously before he goes to Rugby, but what the children in mean streets will never learn if left to themselves—namely, how to shift for themselves when thrown entirely on their own resources.

Boy Scouts.

Intellectual self-reliance the schools can teach, but not reliance on one's own ingenuity, invention, shrewdness, and common sense in unforeseen circumstances and before unforeseen problems; nor can they teach the practical arts of life, as scouting should teach them. Ethically scouting gives something of that training which Tom Brown gets in the playground—the training in self-discipline as the member of a disciplined community.

A CIRCULAR from Printing House Square announced that forty thousand specimen copies of the March *Educational Supplement* would be sent to Ministers of all denominations, and, as an inducement to advertisers, it was stated as a fact that the majority of schoolmasters are clergymen. Even if we restrict it to the upper classes who read the *Times*, this is an extraordinary exaggeration. Our impression was that 5 per cent. would be nearer the mark, but we checked it by a reference to the "Public Schools Yearbook." Taking at random seven of the leading public schools, we find 273 laymen against 28 clerics. The particulars are not without interest: Eton, 70, 5; Harrow, 39, 5; Rugby, 32, 6; Winchester, 29, 5; Westminster, 18, 3; Clifton, 51, 2; City of London, 34, 2. As in county schools a cleric is the exception, we think our estimate is not very wide of the mark.

"R. H." has been preaching a sermon in the *Morning Post* on Drudgery, and a very excellent sermon it is. The subject is one about which teachers do not care to talk much. No educational association has yet been bold enough to discuss such a topic as "The Need for Dull Work," no president daring enough to give an address on "The Value of Grind in Education." Our meetings have always something of a drawing-room flavour about them, and only the pleasantest subjects may be mentioned. "R. H." is not afraid to grasp the nettle. He distinguishes very well between intelligent and unintelligent drudgery, between drudgery undertaken because it is necessary to the attainment of some desired end, and the drudgery which knows no purpose beyond itself, and he points out that, as the boy or girl grows, the second kind should gradually give way entirely to the first. But when he argues against requiring unthinking obedience from school children, he is merely setting up a ninepin to bowl over. Teachers who hold that the children should be taught to obey without asking why are very rare nowadays. To insist on unreasoning obedience may be necessary at times, as for instance with the charge of the Light Brigade, but no good teacher would ever regard it as anything but an unfortunate necessity.

FOR some federation of this kind there is a valuable precedent. The Federal Council of Secondary School Associations grew out of the sense of the weakness of the individual associations and the consequent need for union amongst them. It was formed some eight years ago, and now includes representatives of nine of what we may call the political associations—that is, those which are concerned mainly with questions of administration and the position of teachers. The Head Masters' Conference even has at least pronounced a blessing on the Council by appointing a representative.

Some very useful work has been done, especially in recent years. Registration, pensions, examinations in connexion with the report of the Consultative Committee thereon, and the forthcoming Education Bill have all been discussed. Reports have been drawn up and in some cases conferences have been held with the Board of Education. The report on a new basis of State grants is a valuable contribution to a difficult problem. This result shows that federations may work successfully, in spite of the cumbersomeness of their machinery. What the Federal Council does for administrative questions, there is need that some other similar body should do for more strictly educational questions.

SUCH are the threatenings of a famine of teachers that the Board of Education has been compelled to agree to the suggestion of a number of Local Authorities that the Supplementary Teachers now employed in teaching in the upper departments of rural schools should be permitted to remain in office till 1919, instead of disappearing this year, as had been the Board's original intention. There is no question about the reason—the circular of the Board states plainly that if these teachers were ejected their places could not be filled. As for the supplementary teachers now employed in the infants' departments of rural schools, there is apparently no prospect of their ever giving way to properly qualified mistresses. It is curious that the younger the children, the less apparently is the skill needed to teach them. But for our solace the Board announce one reform, which they evidently hope will at least give a sugar coating to the pill. No new appointments of unqualified teachers to urban schools are to be sanctioned. With this grain of comfort we must be content for another five years.

THE English Association has issued a report on examinations in English at the senior stage—that is, for boys and girls of about sixteen years of age. Their first suggestion is that English should be compulsory for all candidates and should include at least two papers, one on English Language and Composition and one on English Literature. They protest against the idea that nothing but an essay is needed as a test in composition, and suggest various other exercises, all of them useful if they can be prevented from becoming artificial. The subjects set for the essays are criticized, but the Association's own suggestions only show how hard it is to avoid the commonplace without falling into the over-difficult. How many boys could make anything of the question whether Milton is likely ever to become a popular poet? The invitation to "discuss the following specimens of English writing" is hopelessly vague. Questions on the history of language are ruled out, a view with which most teachers will agree; analysis and grammar it is desired to make optional, a point on which there will probably be some difference of opinion. Schools should be examined individually in English literature, each school drawing up its list of texts read and indicating the general lines of treatment; and there should be an oral examination, which should include reading aloud. But the idea that good reading aloud is by itself a sufficient proof of intelligence is declared to be a fallacy, a view with which most experienced examiners will agree.

Educational Grants to London.

THE London County Council, it must be admitted, have a very strong claim for more generous aid from Government for education. Taking England and Wales, exclusive of London, over 50 per cent. of the expenditure in elementary education in 1911-12 was borne by grants, whereas in London the proportion was 28 per cent., and is now less. London is now claiming 50 per cent., without prejudice to the claims of Provincial Authorities. A high educational standard has always been maintained in London schools, largely at the expense of the rates, but without any corresponding relief in respect of control by the Board of Education. Salaries of teachers are necessarily higher in London, owing to the extra cost of living in London. It may be of interest to recall that the proposed half-and-half basis was discussed in Parliament so long ago as 1870.

LOCAL AUTHORITIES.

The Supplementary Teacher.

IN view of the general deficiency in the supply of teachers, it will be recognized that the Board of Education has been well advised not to aggravate the position by giving effect to the provision relating to the employment of supplementary teachers, which, according to the Code for 1909, was to be put into operation this year. Under existing circumstances, the loss of these teachers would unquestionably, in many schools, have resulted in larger classes and increased the strain upon the other members of the staff. "It is not, in fact, possible," the Board admits, "in the interests of the schools, to dispense at the present moment with so large a number of teaching units as is represented by the Supplementary Teachers concerned." The Board have, therefore, decided to allow the teachers affected to continue to be employed in the school or department in which they are at present serving until July 31, 1919.

Limited Recognition.

THE Board have decided, however, to restrict the recognition of new supplementary teachers to infants' classes in rural schools and to the lowest class of older scholars in such schools, provided the average attendance does not exceed 100. In urban schools, therefore, whether in the areas of County Councils or other Local Education Authorities, the only supplementary teachers recognized will be: (a) those who have continued to be employed in the same school (or department) for older children since July 31, 1909; and (b) those who, after July 31 of this year, continue to be employed in an infants' class in the same school or department in which they are recognized on that date. The regulation under which it was necessary for at least one certificated teacher to be employed for every complete group of 80 scholars in average attendance has also been revised by reducing the size of the group to seventy.

Lancashire.

IN the eleventh Annual Report of the Education Committee to the County Council of Lancashire some interesting statistics are given to indicate the development of the work during the course of the years 1903-1913. Such figures serve to show the progress which has been made in the provision of improved buildings, in the strengthening of the teaching staffs, and in the number of pupils availing themselves of the facilities afforded, and it may not unreasonably be claimed that the better environment, and still more the additions to the number of competent teachers, must have led to an improvement in the character of the education received. Educational progress cannot, however, be represented wholly by figures, and the Committee has largely to rely upon the testimony of Inspectors as to the progress achieved. While their reports naturally contain criticisms and suggestions for consideration by the teachers, they have not infrequently expressed the opinion that a great advance has been made throughout the county area during the last decade.

IN 1903 there were 700 schools, 653 voluntary and 47 council. There are now 704 schools, 578 voluntary and 126 council. Of the former 60 are entirely new or remodelled premises, whilst the premises of many others have been substantially improved. Of the council schools, 42 are new or have been remodelled. The average attendance of scholars has increased from 132,660 to 133,657, and during the same period the number of teachers employed shows the following advance:—

	1902-3.	1912-13.
Certificated	1,579	{ 1,980 217*
Uncertificated	1,181	{ 1,708 12*
Supplementary	591	456
Total Adult Teachers ...	3,351	4,373

* Serving at a lower status.

The teachers in training, probationers, pupil and student teachers, have dropped from 1,254 to 161. The number of schools in connexion with which instruction is given in special subjects has increased from 54 to 558. In 1903, of course, there were no Inspectors or School Nurses; there are now 11 of the former and 22 of the latter.

Salaries of Teachers.

THE Lancashire Committee has adopted a revised scale of salaries of teachers under which a trained certificated master rises to a maximum of £150, and a trained certificated mistress to £120. This may involve a total additional expenditure on teachers' salaries of over £17,000 when the scale is in full operation. Ten years ago the expenditure on teachers' salaries amounted to £236,614; it is now £380,690. The extent to which the Education Act of 1902 increased the burden of rate-payers in an area like Lancashire, where the number of Board Schools was relatively small, will be realized by the fact that in 1902-3 the receipts from rates for Board Schools was £13,512. In 1912-13 the rate contribution was £240,156—£216,808 being charged on the county area for elementary education and £23,348 on special areas.

Results.

SOME observers of the existing system of elementary education are of opinion that, compared with twenty-five years ago, the best schools are much better and the others not so good. As a general rule, any attempt to obtain definite information as to the attainments in knowledge of the children who have spent eight or nine years in compulsory schooling are strenuously resisted. To seek to obtain such information is regarded as a return to the iniquitous system of payment by results. When, however, any reliable statistics are available, they usually point to an extremely unsatisfactory condition of affairs. In Lancashire an optional examination is held for the award of merit certificates. It is intended to afford a useful test of the standard of attainment reached by pupils who are about to leave the elementary schools. The number of "leavers" in Lancashire each year is about 16,000. Of these, in 1913, 2,373 were presented for the merit certificate examination, and 920 passed. As apparently "only the best scholars" are submitted for examination, the result of this test when compared with the number of leavers appears to indicate that either too much is expected or too little done.

Higher Education.

WITH regard to education "other than elementary," the Lancashire Committee was gratified to receive last year from the Board of Education a "general report on the County Secondary Schools," in which testimony was borne to the marked improvement in the quality as well as the extent of the secondary education provided. The number of pupils, in ten years, has increased from 2,898 to 4,838, and the number of scholars exempt from the payment of fees from 260 to 1,661. Of the teachers employed the number of "graduates" has advanced from 82 to 240. Class entries for technical schools and evening classes has gone up from 71,669 to 111,279. This development is due, very largely, to the adoption of the course system, whereby most students take two or more classes—a condition which, it is stated, has greatly enhanced the standard of efficiency in the work done. On scholarships and exhibitions £8,170 was spent in 1902-3, and £22,134 in 1912-13. During the decade the rates levied for higher education, both local and county, have advanced from a total of £10,496 to £89,244.

Cost of Building. THE report of the Lancashire Committee contains a valuable memorandum prepared by the County Architect with reference to the increased cost of building schools. His conclusions are based upon inquiries addressed to a considerable number of firms engaged in various branches of the building trade. So far as labour is concerned, it appears that in most parts of the county there has been an increase of 10 per cent. in nearly all the trades, and further increases are pending; in addition, the National Insurance Act is calculated to increase the cost by from 2 per cent. to $3\frac{1}{2}$ per cent., the actual amount depending upon special circumstances. Consequently the increased cost of labour may be placed at about $12\frac{1}{2}$ per cent. Regarding materials there are considerable variations ranging from an average increase of 14 per cent. for common bricks to 60 per cent. for cast-iron goods. Drain pipes, &c., have increased $41\frac{1}{2}$ per cent., timber 30 per cent., Portland cement 22 per cent., and so on. While it is impossible to state accurately the precise effect of these increases on the cost of the erection of buildings as a whole, it is certain that they have had the effect of increasing the expense of building operations by at least 20 per cent.

SCIENCE NOTES.

Theory and Practice. SIR J. J. THOMSON is giving a course of six lectures at the Royal Institution on recent discoveries in physical science. In the course of one of these he referred to the great harm which must follow any attempt to segregate researches into two classes: the one "practical," and therefore worthy of financial support by governments and commercial firms; the other "theoretical," and therefore to be confined to professors. He pointed out (as has been done thousands of times before) that, even from the commercial aspect alone, pure research brings the most abundant return. We refer to this here because it seems that science teaching in schools should lead to such appreciation of research that the frequent iteration of its value by men like the President of the Royal Society should be unnecessary. As a matter of fact, the average Englishman regards scientific research with amusement not untinged with contempt, except when the practical outcome is immediate and obvious.

Liquid Helium. THE finest low temperature laboratory in the world is that at Leyden, presided over by Dr. Kamerlingh Onnes. Here liquid hydrogen is quite a familiar substance, although its boiling point is only twenty degrees above absolute zero, while that of oxygen is over seventy degrees higher. Dr. Onnes accomplished the liquefaction of helium two years ago, and this is one of the most remarkable achievements of science, seeing that the liquid boils within five degrees of the absolute zero. Theories of electric conductivity led to the expectation that the resistance of pure metals would practically vanish near the absolute zero of temperature. Dr. Onnes has actually passed a current of several hundred amperes through a thread or wire less than a millimetre in diameter of frozen mercury cooled by liquid helium. Quite recently he has found a saturation value per square centimetre of section for ordinary conductivity, and there is no doubt that we are on the eve of important discoveries as to the nature of atoms and electric currents. Sir J. J. Thomson drew attention the other day to a possible explanation of the simple relation between conductivity for heat and conductivity for electricity. It is simply that the same electrons are responsible for both phenomena.

Non-Vocational Lectures in London. DURING the past month several hundred lectures have been given in the L.C.C. evening institutes on non-vocational subjects. The idea of these lectures is to arouse interest in the boys and girls who are the "students" of these night classes, and we have looked into the list of topics with the idea of finding out whether they are likely to engender a desire for scientific knowledge. We find that not more than 15 per cent. of the lectures can be classed under the head of science; the proportion strikes us as too small. At the same time the titles of the lectures are decidedly appetizing, and we should be glad to hear that boys between fifteen and eighteen years of age had been attracted.

Use of Public Museums. AN excellent discussion meeting on the educational use of museums took place on March 7 in the offices of the Teachers' Guild, when Mr. M. D. Hill presided over a gathering of a very representative

character. The object of the meeting was to help the British Association Committee, which is preparing a report on the subject, and there can be no doubt that when the report appears, at the Manchester meeting in 1915, its value will have been enhanced by the eminently practical advice given by teachers and curators present. It was pleasing to hear the work of the guide-demonstrators at South Kensington referred to in appreciative terms. It would, perhaps, be premature to disclose the decisions of the meeting, but we may mention that there was a strong feeling in favour of a special classroom being attached to public museums, for the use of classes attending from schools. We may also congratulate Dr. White, who, as hon. secretary of the Teachers' Guild Education Society, had spared no pains in organizing the meeting, on the result of her efforts.

Compressed Air. As an instance of the work done in compressing air, and its conversion into heat, which will be familiar to most schoolboys, we may take the use of a bicycle pump. Very frequently the valve works stiffly, and then the pump gets hot. This heating is not due to friction between the piston and the tube, as may be shown by working the pump when detached so that the air escapes. The rise in temperature is almost entirely due to compression of the air, and the action is exactly analogous to that of the fire-syringe used by natives of Borneo. In the modern Diesel oil-engine the ignition of the oil is brought about solely by the compression of the air in the cylinder, magneto-ignition being dispensed with. Recently, compressed air has been used for driving a kinematograph film, through the agency of a small portable turbine. This arrangement has been successfully used for Nature-study photography, Mr. Cherry Kearnton obtaining wonderful results by means of this "Aeroscope," as it is called. The whole apparatus is quite light and compact, and the previous compression of the air is effected by a few strokes of a cycle pump.

Women Astronomers. SIR JOHN HERSCHEL wrote of an "astronomess." We decline to use the word, which offends our ears; but we are glad to see the first-rate work done by women in the astronomical field receive due recognition. The first honorary lady member of the R.A.S. was Caroline Herschel; the latest to be elected is Miss A. Cannon, of the Harvard College Observatory. Miss Cannon has discovered many new variable stars and other objects of interest; but her main work has been the classification of 150,000 stars according to the types of their spectra. It is therefore quite fitting that she should share with Lady Huggins the distinction of the honorary membership of the Royal Astronomical Society.

THE REAL PROBLEM OF SCHOOL CADET CORPS.

BY FATOUVILLE.

IT is now four years since the War Office, through the medium of the Cadet Associations, offered certain privileges to schools willing to raise and support Cadet Corps. In several instances where this offer was accepted Rifle Clubs were already in existence, and their combined experience as Club and Corps is at the present time of exceptional interest. A comparative study of the two institutions affords conclusive evidence that the more varied training of the cadet is of far greater educational value than that of a member of a Rifle Club, the object of which is to impart instruction in one subject only, namely, shooting.

Nevertheless, a large number of schools still hold aloof from a movement which has in it possibilities for improving physically and mentally the boyhood of these islands, greater, almost, than those of the Boy Scouts. The saying, "There are no bad companies, there are only bad officers," is as applicable to the cadet units of to-day as it was to the regiments of Frederick the Great.

The reason, therefore, why so many school authorities refuse to sanction the formation of a corps must be attributed, it is to be feared, to a natural hesitancy to ask masters to undertake duties in the performance of which, unless better provision is made for their instruction, there is little possibility of a cadet officer becoming really efficient.

Until the promoters of the Cadet Movement are able to give more serious attention to the matters affecting an officer's training, it is a debatable question whether a school staff should attempt to provide a course of military training, or whether it should not await further developments and be content for the present with a Rifle Club. The success of the latter can nearly always be assured, provided the master responsible for supervision duty on the range has enthusiasm. For him to possess the other qualities that go to make a leader of boys is immaterial.

In the case of a Cadet Corps, on the other hand, when once the novelty of a new movement has worn off, the maintenance of interest and discipline will depend not on the enthusiasm, but on the personality of the O.C. and his efficiency in military matters.

It is assumed for the purposes of this paper that school authorities have decided on the more ambitious scheme of Cadet Training. Bearing in mind that to inculcate discipline into Cadets as a Corps is a totally different thing from giving instruction to members of a Rifle Club as individuals, they will need to exercise considerable caution in selecting a member of the staff to undertake the responsibilities of commanding officer. Few schools are fortunate enough to possess a master qualified by previous military training to handle a company, and, as the necessary smartness can with difficulty be acquired by anyone outside the Territorial Force, no attempt should be made to start a corps unless the master appointed to take command is first prepared to accept a commission.

Organization and clerical work, the supervision of the junior officers, and, finally, his own attendance at Territorial headquarters, will make a heavy demand on an O.C.'s spare time; in return for this, it is only reasonable to expect that he should be relieved of all other duties connected with the outdoor life of a school.

Whilst many may be agreed that there is practically only one way of ensuring the efficiency of a senior officer—namely, by service with the Territorials—with regard to the training of his subordinates there is probably a wide divergence of opinion. The "Regulations governing the formation of Cadet Units," issued in 1910, do not help us at all. They merely require that intending officers should satisfy the County Association that they are qualified to impart elementary military instruction to cadets, but no suggestions are made as to how they are to obtain the necessary instruction themselves. The members of the Imperial Cadet Association, at any rate, have definite views on the subject. Last year they went so far as to recommend that no cadet corps should be officered by their masters unless the latter were also members of the Territorial Force.

From the corps' point of view, as distinct from that of the general good of a school, this scheme would certainly be highly desirable. Other departments of school life have, however, their claims to consideration, and one of the chief objections to the above suggestion is that it would involve the remaining members of a staff being saddled with the supervision duty of those specializing in military subjects. Further, it overlooks the following facts:—First, that the attendance of the average master at Chelsea courses necessitates during this period a certain neglect of school work; and secondly, that the absence of a master from the playing fields would affect the school's progress in some branch of athletics for which he had hitherto been responsible.

The Imperial Cadet Association, composed as it is largely of military members, has naturally a somewhat different object in view from that of the educationist.

The former are supporting a scheme which, in 1910, it was hoped, would popularize military training and provide nurseries for local territorial companies; the latter prefers to see in the movement a fresh means of affording the youth of this country an additional outlet for their energy—in short, the complementary occupation to cricket and football.

In its insistence on all cadet officers being territorially trained, the Association shares, it is to be feared, Napoleon's lack of confidence in the literary man. "Bon Dieu, que les

hommes de lettres sont bêtes! Tel qui est propre à traduire un poème n'est pas propre à conduire quinze hommes."

At present, assuming that the performance of his ordinary school duties stands in the way of a cadet subaltern joining the T.F., he is entirely dependent on the O.C. and on military books and manuals for what knowledge of company drill he may possess. This is hardly sufficient, and in the writer's opinion it is the urgent duty of Cadet Associations to provide means whereby this knowledge of a cadet officer, as well as his general efficiency, may be increased.

The totally inadequate grant the War Office allows for each company renders it practically impossible for Associations to act singly in the matter, but combined action on their part might result in the formation of some central instruction camp, preferably during the summer holidays. Here, in addition to formal drill, officers should be afforded the opportunity of specializing in such subjects as tactics, scouting, signalling, and engineering. Were this scheme possible of execution, schools would become independent of the services of the ex-army instructor imported from outside, over whom a master, from his fuller knowledge of the individual needs and capabilities of his cadets, already has a big advantage.

Finally, as the training of the subaltern should approximate to that of the Scout-master, in the same way should the training of the cadet be run, as far as possible, on similar lines to that of the Boy Scout. The average boy of our middle-class secondary school is not going to sacrifice his time—and, what is more, his money—from motives of patriotism, but he does not hesitate to respond if his interest in the corps' work, the traditions of the school, and the records of the regiment to which his company is affiliated, be properly awakened.

When all is said and done, to predispose to patriotism is not the special prerogative of any one department of school life, but the duty of all. Many advocates of the Cadet Movement, therefore, would be quite satisfied to see not so much the awakening of a consciousness of service owed to State as a readiness on the boys' part to take an active share in what School Authorities now recognize as an important factor of a school career.

THE CONDITIONS OF LIFE AND THE TRAINING OF GERMAN HIGHER SCHOOL TEACHERS.

By N. D. WILLIAMS.

IN Germany the secondary-school teacher is a *Beamte*, and he lingers longingly over the word. His status is more nearly that of the Civil Servant in the First Division than of the English public-school master. His salary, which is good relatively to that of other professions, rises regularly every year, and at the end of ten years he is entitled to a pension in case of illness. When once appointed an *Oberlehrer*, he is quite safe in his position unless found guilty of immoral or criminal conduct. The rates of pay of German *Oberlehrers* and *Direktors* of schools are as follows: *Direktor* in the provinces begins at £300, after three years £330, after six years £360, after nine years £390, &c., increasing at the rate of £10 a year; *Oberlehrer* in the provinces begins at £135, after three years £170, after six years £205, after nine years £240, &c., increasing at the rate of £10 a year. In addition to the above salaries an allowance is made for board and lodging, which varies with the cost of living in various districts, and averages £45 a year.

After ten years' service, a teacher is entitled, in case of illness, to a pension of one-third of his salary at the time. This pension increases steadily until, after thirty years' service, it reaches two-thirds of his salary. After the age of sixty-five every teacher may retire. The pay in schools controlled by a town is often from five to ten pounds a year higher.

It will be seen that the scale of pay is not high for English conditions. A German *Oberlehrer* after six years' service

and at least eight years' training from the time of leaving school, that is, at an average age of thirty-four, only receives the salary often given at a public school to a raw recruit from the University. But a comparison between the money value of a teacher's salary in Germany and in England does not enable one to see how well off the German is in relation to his English colleague. The incomes earned by successful men in England are always very much greater than in Germany, but the German teacher's income compares more favourably than in England with that of the lawyer, doctor, or business man. In Germany a salary is worth more than it is here, because life is much simpler and less expensive there, especially for married people, owing to cheap education and the careful management of the German wife, who saves servants' wages by doing most of the cooking and housework. A real comparison between English and German conditions can be seen from the fact that a newly appointed *Oberlehrer* with a salary of £130 a year is generally considered a good match for an upper middle class German girl, who will perhaps receive an allowance of £25 a year from her parents.

The prizes of the educational world—house masterships and head masterships at good public schools—are greater in England than in Germany. It is doubtful, however, whether this means that conditions are better here for brilliant teachers. In the appointment of head masters in English public schools governing bodies still attach more weight to a high University degree, pulpit eloquence, affability and social distinction, than to professional knowledge and ability. How many of our great head masters would be capable of conducting a *Seminar*? On the other hand, if we consider the whole of secondary education in England, the position of the average assistant master with no security of tenure, no regular increase of salary and no pension, is far inferior to that of the German *Oberlehrer*.

In one respect, however, the German is at a disadvantage. He is not generally appointed an *Oberlehrer*, and therefore does not earn an appreciable income until he is twenty-nine or thirty years of age. This is because his training is longer and more strenuous than that of his English colleague. After an average University career of five and a-half years, he must pass his "Prüfung für das höhere Lehramt." For this the candidate must attain a high standard in at least one subject, which he afterwards teaches in the higher forms of the school, and a moderate standard in at least two, which he teaches in the lower. Many candidates, however, take two subjects in the first division and three in the second. The standard required in the first division is about that of a second class honours degree at Cambridge.

It is also an advantage for a candidate to have passed his doctor's degree, and this of course involves a certain amount of original work. On the average the intending teacher after five and a-half years' University career has a better knowledge of his subjects than is the case in England. If unsuccessful in his examination, he becomes a *Seminar Kandidat*, and is sent by the authorities to a higher school possessing a *Seminar*—that is to say, a course of training for teachers. Here, with five or six other *Kandidaten*, he is under the control of the Director of the School. At first he attends classes at the school, which deal with his special subject. Later he takes a class himself, but under the guidance of the form master. The latter, who is often present during his teaching, points out his mistakes and advises him in the best methods of correcting exercises, &c. He is not allowed to give more than ten hours' teaching in the week. Two or three times he must give a *Probetunde* to the class before the assembled staff, who criticize it, and once a week he must attend the *Allgemeine Seminar Sitzung*, presided over by the Director. The *Sitzung* lasts about two hours, and one of the *Kandidaten* reads aloud a carefully prepared résumé of a section from a work on practical or theoretical pedagogics. The course generally includes selections from Paulsen's "Geschichte der Pädagogie," Matthias' "Allgemeine Pädagogie," Münch's "Geist des Lehramts," and from works of other well known educationists dealing with such questions as the awakening of interest in the class, the setting of home

work, and the conflict between inductive and deductive methods. The reading of the résumé, which lasts about half an hour, is followed by a general discussion of the chief points raised. The Director leads the conversation into the realm of practice, giving examples from his own experience and criticizing the teaching and disciplinary methods of the *Kandidaten*.

The following extract from my note-book gives an outline of a Director's criticisms of the teaching methods of one of the *Kandidaten*:

The Director made the following remarks with regard to the *Probetunde* of *Kandidat A*: "(1) I noticed that some of the boys at the back did not always hear what you said. You must not, as it were, enter into conversation with one pupil, but always force the boys to speak so loudly and distinctly that the whole class can hear. Make sure from time to time that this is the case by asking boys to repeat what one of them has said. (2) You must never interrupt the boys in the middle of sentences, but allow them to develop their ideas to the end, even if they are wrong. (3) You must not arbitrarily substitute your meaning of a word, in translation, for a partially correct one given by a pupil, even if yours be the better, without first explaining the connexion between the two meanings. (4) I noticed that a small proportion of the class never held up their hands during the hour. You must not concentrate on the most intelligent pupils. The art of teaching is to obtain answers from the shy, backward, and lazy boys. (5) I think that you make a mistake in allowing each boy to take the part of a separate character in reading a play. The boys only pay attention to their own parts."

Most of these remarks are obvious enough and probably unnecessary for the able teacher, but they are very useful for the average *Kandidat*, as a piece of practical criticism of his work, and they stimulate his interest in educational matters.

The head teachers in modern languages, mathematics, classics, history and German hold their *Seminar Sitzungen* once a week for the *Kandidaten* who have specialized in these subjects. The procedure is similar to that of the *Allgemeine Sitzung* described above. In the Modern Language *Seminar*, for instance, résumés of chapters from Münch's "Französischer Unterricht," Wendt's "Encyclopédie des englischen Unterrichts," and from other books describing the historical development of modern language teaching in Germany are generally read. Especially valuable are the discussions of the leading controversial questions, such as the advisability of introducing the differential calculus into the school course, or the conflict between the Direct Methods and the old Grammatical Methods of modern language teaching.

The value of the *Seminarjahr* is that, on the one hand, the *Kandidat* is given leisure and opportunity to consider the fundamental questions of Education, and on the other has an opportunity of testing his teaching theories under the supervision of experienced teachers.

At the end of the *Seminarjahr* a confidential report on the *Kandidat's* teaching capacity and personal qualities is sent by the Director to the *Provinzial Behörden*. Except in rare cases of great incompetency or faults of character, the *Kandidat* is allowed to proceed in his training, and is sent for his *Probejahr* to another school. During this year he again gives a maximum of ten hours' teaching a week under the supervision of the form masters, except when he takes over regular paid teaching in case of illness—which often happens. He is also allowed to spend the *Probejahr* abroad, in order to perfect his knowledge of foreign languages. At the end of the *Probejahr* another confidential Report is sent by the Director to the *Provinzial Behörden*. If, as is almost always the case, the *Kandidat's* reports are considered satisfactory, he receives a Certificate qualifying him for appointment as an *Oberlehrer* (*Zeugnis der Anstellungsfähigkeit*). He now has the choice of entering his name for appointment at a School directly under State management (*Staatsdienst*) or under the management of a town and indirectly controlled by the State (*Städtischer Dienst*). The town schools generally try to secure the most capable rather than the oldest teachers, but the appointments in the State Schools are mainly given in order of seniority (*Anciennitäts Princip*), and the *Kandidat* may have to wait a year or more before being appointed and receiving a salary.

The statistics on this point are very interesting, and show the wave-like motion in the relations of supply to demand that is common to all professions. In 1871 the *Anstellungsfähige Kandidaten* had to wait on the average three months for an *Oberlehrer* appointment. The time of waiting increased in 1876 to eight months, in 1881 to fourteen months, in 1886 to three years, in 1891 to five years, and in 1897 to six and a-half years. The time of waiting rapidly decreased to three months in 1909. Since then it has increased again and will probably reach seven years in 1919. The position of affairs, however, has been changed in the present year by the new regulations directing that a capable *Kandidat* shall be appointed over the head of a less capable colleague who has been waiting a longer time.

JOTTINGS.

WE have received the first number of "Latin Teaching" (price 6d.), the Journal of the Association for the Reform of Latin Teaching, which now numbers 130 members. It has a useful article on First Lessons in Roman Numismatics, a specimen composition of Reformed pupils. Mr. Paine, the Hon. Secretary, throws down a bold challenge: One minute a week on the direct method would be better than many hours a week on the traditional method.

NOTUMQUE furens quid femina possit.

Quid facies facies Veneris cum veneris ante?

Caede, cutem cultro percutit, et in crucem abi.

AT the Scottish Conference of "The Christian Education of Women in the East," held in Glasgow February 6 to 8, the principal speakers were Miss McDougall (Westfield College) and the Rev. Lord William Gascoyne-Cecil. Evidence of the growing demand in the Zenana for Western culture was introduced, and the necessity shown of strengthening the educational policy of missionary societies.

ARRANGEMENTS have been made for holding a service at St. Paul's Cathedral on the evening of Ascension Day, May 21, to which all members of the teaching profession are invited. The service will begin at 6.30, and no tickets of admission are required. The preacher will be the Bishop of Southwell. There will be an amateur choir to lead the congregation, and teachers, men and women, willing to assist are requested to send in their names to the Secretary, Teachers' Service, 67 Queen Street, E.C., not later than April 9.

A CONTEMPORARY is offering a prize for the best definition of a "howler." We are not so rash as to compete, but it has struck us that a very passable one might be framed by the "contamination" of two anecdotes. The late Mr. F. W. Walker, asked by his son, "What is Accadian?" replied "A language which some fellow invented to make money out of." The Warden of New College was once discovered by a friend pacing up and down his study in fits of laughter, and when asked what the joke was confessed that he had been amusing himself by inventing some new Spoonerisms. So a howler might be defined as a variety of the Irish bull invented by a scholastic penny-a-liner and fathered on the innocent schoolboy.

THE Council of the Girls' Public Day School Trust have appointed Miss F. H. Johnson (Final Honours in Modern Languages, Oxford), second mistress at Birkenhead High School, to be Head Mistress of Birkenhead High School, in succession to Miss Baines, who is resigning at the end of this term.

TEACHERS of history will be interested in the movement to preserve the field of Waterloo, threatened by the builder. By a singular stroke of good fortune the most famous battlefield on which British soldiers ever fought is within easy distance of London, and, what is more, the tactics of the battle, and, indeed, of the whole campaign, are easily understood. People who are quite ignorant of the military art can comprehend the whole struggle as they survey the ground from the top of the Lion Monument. If Napoleon and Wellington had had the needs of the British schoolboy in their minds they could hardly have arranged the thing better. The loss of the battlefield would be an undoubted loss to historical education in England.

(Continued on page 252.)

NELSON'S HIGHROADS SERIES

HISTORY, GEOGRAPHY, AND LITERATURE.

UNEQUALLED ALIKE FOR TEXT, PRESENTATION,
ILLUSTRATION, AND GENERAL PRODUCTION.

Completion of the Literature Series.

Messrs. THOMAS NELSON & SONS have just issued a beautifully printed Prospectus of the HIGHROADS SERIES, which may be had upon application.

To give some idea of the choice of subject, the descriptive part of the Prospectus is accompanied by specimen pages from various books of the series, and to show that every illustration is the work of a great Artist, the following, from some of the treasures of public and private Art Galleries, are charmingly reproduced in the Prospectus.

The Ancestor on the Tapestry	-	By J. HAYNES WILLIAMS.
Swift and Stella	- - - -	By MARGARET J. DICKSEE.
Four-footed Scouts	- - - -	By Sir E. LANDSEER, R.A.
Shakespeare at the age of 12	-	By JAMES SANT, R.A.
The Babes in the Wood	- - - -	By W. R. SYMONDS.
How we Caught the Pilchards	-	By C. NAPIER HENRY, A.R.A.
The Dog in the Manger	- - - -	By WALTER HUNT.

THOMAS NELSON & SONS, 35 & 36 Paternoster Row, London, E.C.

USE

DUSTLESS AND HYGIENIC SCHOOLS

On all School, Laboratory, &c., Floors and Linoleums of every description

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

VERY EARLY in the EASTER VACATION for best results.**"Florigene"** is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE,

and is strongly recommended by Medical and other expert authorities.

It costs little, and is easily applied Not sticky—the ordinary daily dry sweeping alone required—scrubbing being optional.

It is IMPORTANT to NOTE that**ONE APPLICATION** of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only **during each sweeping** (without sprinkling of any kind), but **also throughout all the intervening periods**—which is even of **greater hygienic importance**.**"Florigene"** also saves time and labour.**"Florigene"** has been used for many years on the floors of The Royal Naval Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies with approval.

Send for particulars, Medical Reports and Testimonials to the Sole Manufacturers—

HOLIDAY COURSES FOR INSTRUCTION IN MODERN LANGUAGES, 1914.—The Board of Education has just published a list of forty-three Holiday Courses in Modern Languages which will be held at different times during the present year, but mostly in the summer months. Eight of the courses are in German-speaking countries; three in French Switzerland; four in Spain; one in Italy, at Florence; five in Great Britain, at Edinburgh, Letchworth, Oxford, London, and Ramsgate; and the rest in France. The table published by the Board of Education gives the date of each Course, the fees, return fares from London, lowest cost of boarding, principal subjects of instruction, address of Local Secretary, &c. This paper is no longer distributed gratuitously, and copies (price 2d., by post 2½d.) can be obtained direct from Messrs. Wyman & Sons, Ltd., Fetter Lane, London, E.C., or through any bookseller.

WHAT IS EDUCATION?

By STANLEY LEATHES, O.B.,

formerly Fellow and Lecturer in History at Trinity College, Cambridge. Crown 8vo, 2s. 6d. net.

Mr. STANLEY LEATHES, formerly Fellow and Lecturer in History at Trinity College, Cambridge, and one of the editors of the Cambridge Modern History, is now engaged in directing public examinations. He here uses his long and wide experience to treat of education as a whole—physical, moral, spiritual, intellectual; education for business, education for life; education by life, education by the State; the education of all, of the many, of the few.

MONTESSORI PRINCIPLES AND PRACTICE.

By E. P. CULVERWELL, M.A.

Fellow and Senior Tutor, Trinity College, Dublin; Professor of Education, University of Dublin.

"Professor Culverwell has approached his task with sympathy and understanding, but always in the scientific spirit. His book shows us the psychological basis upon which the Montessori psychology is constructed in a clearer and more scientific manner than the authoress herself. . . . It forms an important contribution to Montessori literature and to pedagogics in general."—*Morning Post*.

GERMAN DECLENSIONS AND CONJUGATIONS.

By Help of Reason and Rhyme.

By FRANCIS STORR, B.A. Camb.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

A BOOK THAT "MAY BE USED WITH ADVANTAGE
WITH ANY FRENCH GRAMMAR."

EIGHTH EDITION. With Supplementary Easier Exercises.

Fcap. 8vo, cloth, interleaved. Price One Shilling.

Hints on French Syntax.

By FRANCIS STORR, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum*.

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

BELL'S NEW BOOKS.

REPRESENTATIVE PASSAGES FROM ENGLISH LITERATURE.

Chosen by W. H. HUDSON. viii+338 pp. 2s. 6d. net.

The already large numbers who are using Professor Hudson's "Outline History" have been awaiting this volume, which should prove invaluable for illustrating and amplifying his brilliant narrative.

A PRACTICAL COURSE IN ENGLISH.

By E. J. BALLEY, M.A., Whitgift Grammar School, Croydon. 1s. 6d.

Designed to give the pupil a practical understanding of his mother tongue and the use of it. The Second Part forms a generous compendium of Exercises in Analysis, Construction, Correction of Errors, turning Direct Speech into Indirect, and also a Set of Local Examination Papers in Grammar and Composition.

EXERCISES IN ENGLISH.

By FRED. W. BEWSHER, B.A., St. Paul's School. Crown 8vo. 144 pp. 1s. net.

Intended to serve as a second part to "Aids to the Writing of English Composition." Its object is twofold: to endow the pupil with a greater command of words and a fuller knowledge of framing sentences, and to make him familiar with questions set at the various examinations. The recommendations of the Joint Committee of Grammatical Terminology are followed throughout.

BELL'S FRENCH PICTURE CARDS.

THIRD SERIES. Now ready. 1s. 3d. per set. With Questionnaire on back of each Card.

Twelve cards, each one of which contains three scenes from a story. They are thus specially adapted for use as materials for composition.

The following is the list of subjects:—I. Une Promenade à Bicyclette. II. L'Eau. III. Le Feu. IV. Une Aventure au bord de la mer. V. Histoire d'une Miche de Pain. VI. L'Aéroplane. VII. Le Lion et le Rat. VIII. Jeanne d'Arc. IX. Napoléon en Russie. X. La Prise de Québec. XI. Le Rhone. XII. Le Charbon.

PROBLEM PAPERS FOR PREPARATORY SCHOOLS.

(ARITHMETIC.)

By T. COOPER SMITH, B.A., Late Scholar of University College, Oxford, Mathematical Master at St. Peter's Court, Broadstairs. viii+108 pp. 1s. 6d.

A varied collection of original and simple problems, specially designed to enlist the interest of boys and girls through being selected from phenomena within their experience.

A FIRST NUMERICAL TRIGONOMETRY

By W. G. BORCHARDT, M.A., B.Sc., and the Rev. A. D. PERROTT, M.A. 2s. 6d.

Written to supply the growing demand for a textbook on Trigonometry suitable for the lowest classes of secondary schools, and to meet the recommendations of the Mathematical Association Committee on the "Teaching of Elementary Algebra and Numerical Trigonometry," 1911.

JUNIOR TRIGONOMETRY.

By THE SAME AUTHORS. Crown 8vo. 3s. 6d.

An enlarged edition of the above book, containing chapters on Identities, Equations, and compound Angles, will be found suitable for such examinations as the Cambridge and Oxford Junior Locals, First Class College of Preceptors, Additional Mathematics of the Central Welsh Board, Oxford and Cambridge School Certificates, Scotch Leaving Certificate (Higher Grade), and the Lower Examination in Pure Mathematics of the Board of Education.

A SOCIAL HISTORY OF ENGLAND.

By GEORGE GUEST, B.A. Illustrated. Crown 8vo. 1s. 6d.

This book is the first of a new series of Concentric Readers on new and original lines. There has been a growing dissatisfaction with the old type of Concentric History, which covered the same ground year after year in greater detail with wearisome reiteration. This series, on the other hand, aims at presenting in each volume a different aspect of the national development, and so at once broadening the outlook and maintaining the interest of the pupil. Other volumes dealing with **Constitutional History** and **Political and Military History** are in active preparation.

BELL'S ENGLISH HISTORY SOURCE BOOKS.

Edited by S. E. WINBOLT, M.A., and KENNETH BELL, M.A. Crown 8vo. viii+20 pp. 1s. net each.

1856-1876. FROM PALMERSTON TO DISRAELI. Edited by EWING HARDING, B.A.

1876-1887. IMPERIALISM AND MR. GLADSTONE. Edited by R. H. GREYTON, M.A.

Others in preparation.

UNIFORM VOLUMES.

1637-1688. THE SCOTTISH COVENANTERS.

By J. PRINGLE THOMSON, M.A. *Just published.*

1535-1913. CANADA. By JAMES MUNRO, M.A.

A HISTORICAL COURSE FOR MIDDLE FORMS.

By B. L. K. HENDERSON, M.A., D.Litt., and P. MEADOWS, M.A., Assistant Masters at Haberdashers' Aske's School, Cricklewood. In Four Volumes. Crown 8vo. 2s. each.

Vol. I.—**WESTERN EUROPE.**

Vol. II.—**INDUSTRIAL AND SOCIAL HISTORY.**—THE ENGLISH NATION.

Vol. III (in preparation).—**CONSTITUTIONAL HISTORY.**

Vol. IV (in preparation).—**POLITICAL AND GENERAL HISTORY.**

Distinctive Features of this Course are:—

1. The plan for providing for the four years of middle school life between the ages of twelve and sixteen.
2. The careful adaptation of each volume to a year's school work.
3. The combination of outlines and passages from original sources.
4. The separate treatment of the important aspects of national history.
5. The employment of questions which will necessitate on the part of the pupil reasonable exercise of comparison and judgment.

SURVEYS OF HISTORY.

Greek, Roman, English, French, Biblical, &c., with intervening periods.

By C. H. RUSSELL, M.A., Assistant Master at Clifton College. Crown 4to. 4s. 6d.

A book of reference presenting a panoramic view of History from the Ancient Empire to the Congress of Berlin.

ANCIENT HISTORY FOR SCHOOLS.

From the Earliest Times to the Death of the Emperor Augustus.

5 ENDSLEIGH GARDENS, LONDON, N.W.

**UNIVERSITY OF LILLE.
HOLIDAY COURSES AT
BOULOGNE - SUR - MER.**

Organized by the University of Lille, with the co-operation of the
Alliance Française.

(July 15th to August 30th.—Supplementary Classes, July 1st to 14th.—
A Complete Course covers Four Weeks.)

HIGHER COURSE:**(1) Literary Section; (2) Practical Section; (3) Commercial Section.**

Phonetics (with Apparatus and Phonographs), Literature and Institutions of France, Educational Problems and Organization, Classes for Conversation and Reading, Translation from English into French, Visits to Schools and Places of Interest.

INTERMEDIATE COURSE and PREPARATORY COURSE.

Phonetics, Elementary Grammar, Conversation and Reading,
Life and Manners, Translation into French.
Elementary, Intermediate, and Higher **Certificates of Proficiency** will be given after Examination.

Special Return Tickets for Visitors.

Prospectuses may be had from M. Mts. Chargé de Conférences à l'Université,
Directeur des Cours, 145 Boulevard V. Hugo, Lille, France.

THE
JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.**PUBLISHERS' ANNOUNCEMENTS—**

Whole Page	... £5 10 0	One Column [$\frac{1}{2}$ page]	£3 0 0
Half Column [$\frac{1}{4}$ page]	1 15 0	One-Eighth Page	... 0 17 6
Per Inch in Column, 8/-.			

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—
6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.
prepaid rate.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each
8 words after, 6d.; *prepaid rate.*

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—
"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

IDOLA LINGUARUM.

GREEK.

By Prof. GILBERT MURRAY.

I FIND it difficult to give any confident advice about the teaching of Greek. For one thing, though I have taught Greek for over twenty years, both to advanced students and beginners, I have never taught schoolboys, and I have hardly ever taught people who only took Greek under compulsion and did not really wish to learn. And I fancy it is these two classes that raise most of the difficulties. For another thing—I make the confession without much shame, though certainly without any pride—though I thoroughly enjoy teaching, and especially enjoy teaching beginners, I have never found it possible to lay down any rules for teaching which were not mere commonplaces. I would, for instance, remind a teacher that if he is not interested in the lesson he cannot expect his pupils to be interested. I would advise him to talk about the subject he is teaching and not about other subjects: to make sure that his pupils can hear what he says and see what he writes, and even, as far as possible, understand both.

Going to somewhat bolder ground, I would also urge him, as soon as practicable, to get his pupils to co-operate with him in the work of puzzling out the meaning of the text they are reading. There is always, in every Greek book, a good deal that is either puzzling in itself or else suggestive of problems outside itself. Such questions must be handled with tact; but, in general, I would say that to ignore this element of the unsolved may lead to good results in examinations, but in other respects is a bad mistake. It flattens a subject out; reduces it from a living pursuit of knowledge to a series of lessons to be got up from a textbook. The element of the unsolved is really placed in Greek texts by Providence for the express purpose of exciting the interest of clever pupils and giving them something to pursue and find out, instead of mere masses of stuff to "do right" or to "get

up." Of course, I do not mean that beginners, or even Honours students at a University, should be confused by lists of the varying views of eminent scholars on difficult passages. Such a process only gives them something more—and something very inferior—to "get up." I mean that the class should, within limits, be kept habitually in the state of searching and puzzling things out, and should be given a reasonable hope of now and again being able to help the teacher. I find, for instance, in teaching translation that a teacher can often lead an interesting competition in getting nearer and nearer to the meaning of some Greek phrase, which is probably untranslatable in the end. Pursuing it and approximating to it is a fine training both in thought and in the English language, and it certainly keeps a class alive.

But these are things that every good teacher knows. What seems to me to be chiefly wrong with the teaching of Greek at present is this. Greek, as a subject of general study, is conducting a retreat; and to conduct a retreat is said to be the most difficult operation in warfare. It is so hard to go back and back without being demoralized.

To take one question. Many schools are postponing the age for beginning Greek. This is probably right; but it implies a corresponding increase of the time and energy to be devoted to Greek when the beginning is made, and the tendency is not to give that increase. Quite the contrary. If a boy is made to begin Greek at nine or ten he is somehow hypnotized into a belief that Greek is—for unanalysed reasons—tremendously important, and the same hypnotism affects his teachers. If an enlightened person then appears and persuades that school not to begin Greek till fifteen a contrary hypnotism takes place. There is a vague feeling that after all Greek is rather rot, and lots of fellows don't take it at all. And when the boy begins his Greek he is not induced to put into the work that full vigour of attention which the difficult language really needs. He learns languidly; he fails to understand things; he is bored and stupid. Then he discovers with exultation that, in being bored and stupid, he is doing the advanced thing and displaying superior intellect. He is made the pet of educational reformers.

Again, there is a reaction against the minute, narrow, severe scholarship of past generations. Boys are told by the Classical Association to learn their Latin Grammar thoroughly, but to read Greek chiefly for the interest of the thought and the beauty of the literature. Quite a possible plan, if carefully worked. But the first effect is a general relaxation of effort. The pupil, boy or girl, works well at Latin, and presumably gets out of it the results that hard study will generally bring. He is then set to read Greek—for the beauty of the literature. He will start with Xenophon. Or, no. Since Xenophon is not remarkable for concentrated beauty, he is set at once on to the Prometheus. That ranks among the world's greatest poems; that will immediately bring him his reward. He finds it a little hard; let him use a crib. The crib does not strike him as specially exquisite in its language or its thought. Ah, but let him read the original aloud and feel the beauty of the sound! Unfortunately he cannot read it aloud, because he knows no metre and no quantities. He cannot pronounce six Greek words in succession, much less enjoy their beauty. And to write verses or to learn a little metric . . . who in these days would dream of such things? He goes back to the crib. He can reinforce it by reading bits of the "Histories of Greek Literature" and essays by J. A. Symonds or Mr. Mackail or Dr. Verrall or myself for that matter. He cannot read the Greek books themselves, but he can read, and quote, essays about the books. The retreat on these lines becomes a rout.

What is the remedy? In general terms it is to determine clearly what positions we give up, and what positions we mean to hold, and in these to do our work as well as before or better. Of course there must be many different stages of Greek scholarship, from the Gaisford or Porson Prizeman to the working man who has learnt a little Greek in order to read the New Testament, or the student of literature or philosophy who has learnt no Greek at all, but reads Plato or Homer in a translation. And every stage can be highly

valuable; it all depends on the amount of mental effort, of accuracy and hard-thinking and creative imagination, that is put into it. But I do think that, in the process of retreat, the demands made upon the teacher become always greater. In one way, indeed, they are less. He has far fewer unwilling pupils. He may thank Heaven for that. But, in general, pupils who have no solid grounding in the language are far more dependent on skilled guidance, and such pupils are doubtless on the increase, especially among those classes of the community who formerly had no chance of studying Greek at all. Such pupils misunderstand the translation; they lay emphasis on things that belong merely to the translator; their imaginative background constantly needs filling in. It is a great help in a class of this kind if they just know enough Greek to stumble through easy sentences with a dictionary. Such knowledge does not directly help them much, but it enables the teacher to use more effective methods of explanation. I have known exceedingly good work done in a Plato class of this sort.

I am thinking there of classes outside the ordinary curricula of schools or Universities. For those inside, the demand on the teacher is equally great. His class may not know their accidence, but he must. His class ought to know their syntax, because Greek syntax is easy; but they probably will not, and he must. They will inevitably be sloppy in their translations; he must be exact. He must never delude himself into imagining that a knowledge of Latin, or a pleasant manner, or a smattering of general culture, will enable him to teach Greek without knowing Greek. And of course, at the same time, he must have his imagination awake, so that his class may feel, as he feels, that they are studying really great literature, living thought, or curious and important history.

I will conclude by dealing with a few practical questions. Verse composition is being dropped far and wide. I am sorry, because, in my school days, verse-writing was one of the few bits of artistic work which a boy did "on his own," and my impression is that in the fifth and sixth forms most boys specially enjoyed verses. Still, no doubt they took a vast amount of time, and their utility is not easily demonstrable. They must go, except for the few best boys and girls. But what is to take their place? The answer seems to me perfectly clear. The learning of Greek poetry by heart, as a quite serious and important task. The poetry must be understood, learned, and recited, and false quantities may still be regarded with the horror which they inspired in our fathers. One of the main reasons for learning Greek is to enjoy some of the greatest poetry in the world, and it is impossible to enjoy such poetry if you cannot in imagination "hear" it.

Does this imply that we must teach the new scientific pronunciation? No. Personally I rather prefer the new pronunciation; but at a time when we are throwing overboard so much that is valuable, I doubt if we can afford to take on a heavy piece of additional cargo. As far as the beauty of Greek poetry is concerned, it seems to my ear to matter little which scale of vowel-sounds you adopt, as long as you get the rhythm right. It is much the same with Chaucer or with Shakespeare. It matters immensely that you should pronounce the lines so that they scan and bear their proper rhythm; it matters comparatively little whether you use the modern English vowel-scale or try to restore the Middle-English or the Elizabethan. For the same reason we must not lay much stress on the accents. We do not pronounce Greek by accent. Those who try to do so only caricature the ancient pronunciation and murder the poetry. I should not mind seeing the accents dropped altogether.

Even prose composition is being dropped, and will be dropped more. I love teaching Greek prose myself, and believe greatly in its intellectual value. But it is an accomplishment for the few. In its stead we must insist on accurate written translation. The present standard, even of the best schools, is capable of great improvement. The work produced by holders of classical scholarships in Oxford is often a rough and inexact substructure varnished over with a coat of mechanically ornamental English. When I speak of translation I mean careful translation into prose. I do not person-

ally think that translation into English verse is a good exercise for learners.

To take another question: Fifty years ago there was, I suppose, a dearth of English books about Greek, of commentaries and companions and introductions and hand-books. Now there is a plethora of such books, and, as might be expected, a large number of them are pretty poor. I think students should very early be accustomed to puzzle out a plain text with no help save a lexicon and a good teacher. At the same time, of course, they should also read some other text with a commentary, and it is very important that the commentary should be really good. It is no waste of time for a sixth form boy to read every word of one or two good commentaries. It is one of the necessary ways of learning to understand Greek. As to the plain texts, I do not believe much in covering a great deal of ground, though I do believe in looking up parallel passages, and making the boys read them and understand what they are about. Classical study must always be intensive study. Otherwise it loses its meaning. And I have often found that a student who has read a book rapidly at school without notes or without translating, not only has failed to understand it, but has been somehow made incapable of ever doing so—at any rate till the first reading has been wiped out of his mind. It is with scholarship as with poetry or religion: nothing counts unless it is loved and understood.

REVIEWS AND MINOR NOTICES.

Cambridge Medieval History. Vol. II. (20s. net. Cambridge University Press.)

It is unquestionably true in many cases that "they manage these things better in France"; and in certain important qualities no British co-operative history is likely to reach the high standard set by Lavisse and Rambaud. A group of French scholars, trained under uniform national traditions of clear thought and clear speech, and directed by minds familiar with bureaucratic organization, have succeeded in producing a general history of Europe which can be read continuously, from title to colophon, with almost as much ease as if we were following the workings of a single mind. No English co-operative history has attained, or is likely to attain, this result, and we must estimate the "Cambridge Medieval History" rather as a cyclopædia of facts and ideas than as a continuous narrative. This would probably have been so, even had Profs. Gwatkin and Whitney driven an exclusively British team. But, in this present volume, eleven of the twenty-two contributors are French, German, Austrian, American, Russian, or Spanish; and, much as this has contributed to raise the level of specialist competence among the contributors, it has naturally worked no less unfavourably for the interests of uniformity. Under these circumstances, we cannot help feeling that the editors would do well to minimize the centrifugal tendencies of their work by supplying the reader with a thorough subject-index, if only under a very limited number of headings, such as "army," "education," "finance," &c. We feel strongly also that far more foot-notes should be provided, though we gladly recognize that the present editors deal with us more generously here than did the editors of the *Cambridge Modern History*.

But it is more gracious to take the volume as it stands, and indicate what may be found in it. It begins with Justinian, and takes us down to 717 A.D. in the Eastern Empire, 814 in the Western, and 914 in the two Caliphates: a disparity which was perhaps unavoidable, though it is difficult to justify the absolute silence of this volume upon the subject of learning and education. The schools of Charles the Great are presumably reserved for the next volume; but why should this be so, when every other detail of that important reign is dealt with here? And why should we not be told, at least, when we are to expect to hear about Alcuin and the Palace

School? But here again we find ourselves insisting upon negative points, when we had meant to indicate the positive merits of this volume, in which almost every chapter reaches a high level either of utility or of interest.

Prof. Diehl's two chapters on Justinian are admirably clear and suggestive; and the translator seldom reminds us that he stands between us and the original. It is interesting to compare these contributions with Lord Bryce's almost classical essay on the same subject in the *Encyclopædia Britannica*. There is less unity and vividness of presentment in Prof. Diehl's narrative of this important reign; but he raises more issues and pursues them further; he has the professional historian's advantage over the statesman and publicist who has devoted to history the leisure of a busy life. Next comes a chapter on Roman Law by the veteran Dr. Roby, whose qualifications to deal with the subject are unrivalled among British scholars: and here again the readers of the *Cambridge Medieval History* have a still greater advantage over those of the *Encyclopædia*. Dr. Roby's short historical introduction is, it is true, less vivid than Lord Bryce's; but his greater space, and the labours of a life-time, enable him to give such a detailed and reasoned presentment of the whole subject as the reader would seek in vain within a similar compass elsewhere. The last page, containing a bare enumeration of the religious statutes, is in itself of extreme value. Next follows Prof. Pfister, who deals with Merovingian Gaul, first from the chronicler's point of view and then from that of the *Kulturhistoriker*; both articles are excellent, and we have only detected a slight slip in his ecclesiastical history. It is true that the Rule of Columbanus was decidedly harsher than that of Benedict (148); but there is no proof of this in the instance he gives, that under Columbanus "the monk must have no possessions; he must never even use the word 'My!'" The first of these clauses occurs more than once in St. Benedict's Rule; and the second, its natural corollary, is emphasized by his authoritative commentators; Cardinal Turrecremata decides that to speak of "my book" is a mortal sin. Spain under the Visigoths next finds a highly qualified exponent in Prof. Rafael Altamira; Dr. L. M. Hartmann deals with Lombard Italy, Canon W. H. Hutton with Gregory the Great, Dr. Norman Baynes with Justinian's successors, Prof. Bevan with Mohammed and Islam, and Prof. Becker with the Expansion of the Saracens. We are now half-way through the book; and this enumeration may enable the reader to judge of the rest. We would only indicate the special interest of Dr. Peisker's "Expansion of the Slavs" as a worthy successor to his brilliant article on the Mongols in the first volume, and the terrible (though doubtless salutary) dryness of Mr. Warren's "Conversion of the Kelts," which contains little more than a string of facts. Midway between these two extremes comes Prof. Vinogradoff's "Foundations of Society," a typical product of the research school he has established at Oxford—learned, full of detail, but sometimes inconclusive, and conspicuously lacking in the *vivida vis* of F. W. Maitland, who indeed founded no school, but has left his impress on all English-speaking historians of the Middle Ages.

It is not in one sense an exhilarating volume; for it tells the truth, and the truth of those three centuries from 500 to 800 is very painful. Let us take, from among the most vivid and most terrible pages in the book, Dr. Peisker's description of that perpetual martyrdom which has made the name of Slav synonymous, in nearly all European tongues, with the most hopeless forms of servitude (page 429).

The oldest written history of the Slavs can be shortly summarized—myriads of slave hunts and the enthrallment of entire peoples. The Slav was the most prized of human goods. With increased strength outside his marshy land of origin, hardened to the utmost against all privation, industrious, content with little, good humoured and cheerful, he filled the slave markets of Europe, Asia, and Africa. It must be remembered that for every Slavonic slave who reached his destination at least ten succumbed to inhuman treatment during transport and to the heat of the climate. Indeed, Ibrahim (tenth century), himself in all probability a slave dealer, says: "And the Slavs cannot travel to Lombardy on account of the heat, which is fatal to them." Hence their high price. . . . We see, then, the Slav surrounded on the

north by pirates, on the south by mounted nomads, and hunted and harried like the beast of the forest. Jordanes' words, "Instead of in towns they live in marshes and forests," cover the most terrible national martyrdom in the history of the world. The "fortifications"—simple ramparts—mentioned by the Arabian geographer were not impregnable; indeed, the strongest fortifications of Europe and Asia were stormed by the nomads and Northmen. Mauricius states: "Settled in places very hard of access, forests, rivers, lakes, they provide their dwellings with several exits with a view to accidents, and they bury everything that is not absolutely necessary. . . . When they are suddenly attacked they dive under the water, and, lying on their backs on the bottom, they breathe through a long reed, and thus escape destruction, for the inexperienced take these projecting reeds for natural, but the experienced recognize them by their cut and pierce the body through with them or pull them out, so that the diver must come to the surface or he will be stifled." As late as 1768 parts of the revolting peasants surrounded by the Polish army rescued themselves from the Dnieper by breathing through reeds for more than half a day.

All this is sickeningly true to fact, yet not without its hopeful lesson. The world may have moved too slowly during the past thousand years; but at least it has moved, and will advance yet more. The records of the past may be bitter, but they supply a healthy tonic to minds which too easily despair of the present.

"Home University Library."—*A History of the Freedom of Thought*. By J. B. BURY. (1s. Williams & Norgate.)

Prof. Bury has written a popular book in the sense that it is easy of understanding, but he has omitted no reasoned thought or fruits of knowledge; and therefore this volume, liberal-minded and fair, is a worthy addition to the literature of Rationalism, which has too often savoured of bitterness and narrow-mindedness. The progress of the freedom of thought and the effect of the forces warring against it, are traced from the early Greek times, through the medieval dark ages, to the present day. The persecution of the Christians Prof. Bury regards as indefensible, even from the standpoint of an orthodox and loyal pagan. He does not think that the distrust of science on theological grounds in the Middle Ages, when reason was "in prison," affected the progress of knowledge to any considerable extent.

Greek science had ceased to advance five hundred years before Christianity became powerful. . . . The explanation of this decay is not easy, but we may be sure it is to be sought in the social conditions of the Greek and Roman world. And we may suspect that the social conditions of the Middle Ages would have proved unfavourable to the scientific spirit—the disinterested quest of facts—even if controlling beliefs had not been hostile.

Under the Renaissance and Reformation many sidelights on facts usually insufficiently considered are thrown. The Renaissance created an intellectual atmosphere in which the emancipation of reason could begin and knowledge could resume its progress. The causes making the success of the Reformation possible are traced, and the remark made:

It is an elementary fact, but one which is still shared by many people who have read history superficially, that the Reformation established religious liberty and the right of private judgment. What it did was to bring about a new set of political and social conditions, under which religious liberty could ultimately be secured. . . . the Reformers, like the Church from which they parted, cared nothing for freedom, they only cared for "truth" . . . Luther was quite opposed to liberty of conscience and worship. . . . Calvin's fame for intolerance is blackest. . . . Yet the Reformation involuntarily helped the cause of liberty. The result was contrary to the intentions of its leaders, was indirect and long delayed.

The chapter on "The History of Toleration" deserves expansion. It starts with the earliest known edict of toleration, that of the Indian King Asoka in the third century B.C., while the first European edicts were those of Rome, which terminated the persecution of the Christians. The modern principle of toleration originated with a group of Italian Reformers, the Socinians, in whose creed persecution is condemned. The first modern State which was really tolerant was Rhode Island, founded by Roger Williams, and based on the principle of taking the control of religious matters entirely

out of the hands of the civil government. Full religious liberty was first established in modern Europe by Frederick II, himself a freethinker.

Prof. Bury believes that the abolition of penalties for blasphemy is "urgently needed," but he concludes that the struggle for reason against authority has ended in what appears now to be a decisive and permanent victory for liberty. In the most civilized and progressive countries, freedom of discussion is recognized as a fundamental principle.

The history is well balanced and as much as possible has been gathered in the limited compass.

The Idea of the Industrial School. By GEORG KERSCHENSTEINER. Translated by RUDOLF PINTNER. (2s. Macmillan.)

A short summary of the views of Dr. Kerschesteiner, the Director of Education to the city of Munich and organizer of its system of Continuation Schools, is welcome just at this moment. Starting from the ethical basis of the duty of the individual to live for the community, the author defines the tasks of the elementary school to be the preparation of the child for a vocation, instruction in the ethical value of that vocation, and of the community. As the great majority of mankind will have to gain their living with their hands, manual activities should form a large part of schoolwork. Further, Dr. Kerschesteiner is a believer in the doctrine that the best education is that which a child gets from his own experience. He criticizes present-day schools as developing only passivity and receptivity, and cries aloud for self-activity and the exercise of skill and judgment by the pupil. His basic principle that character is formed by action only is, no doubt, one-sided, for behind action his feeling has many sources, but it has a large measure of practical truth when applied to boys. In the account of the actual work done in what Dr. Kerschesteiner calls "the industrial schools," by which he means elementary schools with a strong infusion of object lessons and manual work in the curriculum, English teachers will not find much that is new to them. This is not one of the branches of education in which Germany is ahead of us. The value of the little volume lies rather in the thoroughness with which the author's theory has been thought out.

What Children Study, and Why. By CHARLES B. GILBERT. (3s. 6d. net. Harrap.)

As Superintendent of Schools, Mr. Gilbert has held a post for which there is no equivalent in England, and he gives us the results of his experience in a discussion of the curriculum and methods of the American public school. Much of his criticism we may well lay to heart—his insistence on the need of lightening the ship and jettisoning the traditional lumber; on taking psychology, not logic, as our guide in determining the order of subjects; and of putting general culture before vocational training. The different conditions of the two countries make some of his deductions inapplicable to England. Thus he dismisses religious teaching of any kind as impossible, and for other reasons any instruction in sex hygiene. The book is discursive, and the order of the chapters is arbitrary. Thus "Writing," which should have followed (or preceded) "Reading," appears towards the end after "Physiology." Phonics are the author's pet aversion, and all he can say for the Spelling Reformers is that their intentions are doubtless good. Spelling, he holds, is purely a matter of memory, and he would revert to the old lists of hard words, only he would group them by subject—baker, tinker, tailor. An extravagant importance is given to letter-writing, which must for the child be an artificial form of composition. "Paucity of language prevents the thinking of high thoughts or of making those delicate analyses of thought that add incalculably to the joy and the fullness of life" is a fine sentiment that might have been better expressed; and it gives one a mild shock to find Tommy Moore sandwiched between Shelley and Shakespeare, and Peter Bell's views on the primrose fathered on Matthew.

The Public Schools Yearbook, 1914. (5s. net. Yearbook Press.)

This is the twenty-fifth issue of this invaluable annual, adopted since 1910 as the official book of reference of the Head Masters' Conference. Besides the 113 public schools of which the prospectus and full particulars are given, it contains a non-official list of preparatory schools. The articles on the various professions give detailed information as to conditions of admission, cost, &c. In this volume the conditions for Special Naval Cadets are set forth, and the article on Engineering has been rewritten. "The Educational Books of the Year" is somewhat meagre and incomplete: of Greek books there are only three. On the other hand, the "Bibliography of Public School Publications, Magazines, &c.," gives information not to be found elsewhere.

Conflicting Ideals: Two Sides of the Woman's Question.

By B. L. HUTCHINS. (1s. 6d. net. Murby.)

Among the many books issued on the Feminist question it is not often that one so sane and equable as this is met. Miss Hutchins possesses the rare ability of being able to state the other side fairly. The two ideals discussed by her are: (1) the patriarchal, where the women are supported by their father or other male relative; and (2) the individual, where the women are self-dependent. The aspect that is dealt with is therefore mainly economic, and the sources of failure in the working out of each ideal, as well as the factors making for good to the community, are indicated as clearly as the complexity of the problem will allow. Miss Hutchins says: "On the one hand we have the woman's movement steering straight for economic independence, . . . giving women that experience in association, knowledge of their fellows, and appreciation of spiritual values which are most needed in the home, and which the home education of women often most deplorably lacks. On the other hand, we have the intense conservatism of the womanly woman. She has the future largely in her hands; yet to this aspect her eyes are blinded and her heart is cold." But in this "eddy and whirlpool of conflicting ideals and warring economic forces" no single solution appears to the author to be either inevitable or desirable. The result will not be a simple one; and it is because the question is viewed synthetically that the booklet is a valuable one in the literature of the subject. A hint of the direction in which the author sees the social remedy is given in one paragraph: "The root of the matter is that it is almost impossible to make any logical scheme or theory that will fit the woman and the young child exactly into a commercially organized society, based on exchange-values. If we may momentarily assume, for the sake of argument, a state of society in which it was decided by the general will or the collective government to use the existing productive forces for the common good; to produce first of all what was needed for healthy existence; to endow the citizens with the means of life, and throw upon them collectively the responsibility of co-operative production of further good, it is obvious that the woman and the child would take a very different position. As the touchstone of value would be use rather than exchange, the mother would draw her endowment, and it would obviously be the worst and most anti-social course to separate her from her infant for outside work as long as it needed her: her health needed rest and recuperation." The book is of interest to all modern women and to all those who have the care and education of girls.

A History of Socialism. By THOMAS KIRKUP. Fifth Edition. Revised and largely rewritten by EDWARD R. PEASE. (Black.)

Kirkup's "History of Socialism," first published in 1892, has long been known as a scholarly and sympathetic account of Socialism. Twenty years is a long period in the history of so new a movement, and it was a happy thought of the publishers to get Mr. E. R. Pease, well known as Secretary of the Fabian Society, to bring the book up to date. Mr. Pease has left the first nine chapters of the work largely untouched. These deal with the early history of Socialism, from Owen and Saint-Simon to the organization of German Social Democracy. He has himself written chapters on Russia, Anarchism and Syndicalism, the Progress of Socialism Abroad, the Modern International and the English School of Socialism, condensed Kirkup's chapters on the Interpretation of Socialism into one, and added several interesting appendixes, including an excellent bibliography. Kirkup's own work is excellent, marked by a fine controlled enthusiasm, which never seems to spoil his critical judgment. He gets behind the extravagances which have marked much Socialist teaching to its central principles as few have done. Mr. Pease has more knowledge of the Socialist movement as it actually exists than any other man, and his chapters are full of information. He seems, in Chapter XI, to be rather grudging in his attitude towards Syndicalism, as though, because everyone is talking about it, he had to insist that it is of no importance. He gives, however, a very striking account of the marvellous, world-wide progress of Socialism in the last twenty years, which provides an effective complement to Kirkup's sympathetic account of principles. On page ix, line 18, of the introduction "successor" should be "succession."

A Manor Book of Ottery Saint Mary. Edited by C. D. WHETHAM and MARGARET her daughter. (7s. 6d. net. Longmans.)

A Manor Book is the survey of an estate made by an industrious steward in the seventeenth century, a stony kernel that only the local antiquary and genealogist will crack. It serves as the nucleus for a study of land tenure in England from the Saxon settlement down to the end of the eighteenth century, with a rapid glance at subsequent conditions of agriculture, and is a valuable supplement to the work of Seebohm, Maitland, and Vinogradoff. Mr. C. R. L. Fletcher has shown us how English history can be made living by local colour

and impersonation, and the teacher will find here plenty of matter to turn to account. For instance, John Grandison, the land-reforming bishop of the fourteenth century, stands out as clearly defined as Mr. Lloyd George. In the latter half of the nineteenth century we read "the welfare of agriculture was sacrificed to a doctrinaire theory of free trade as disastrously as it threatens to be sacrificed on a recrudescence of a system of protection," a sentence which shows Mrs. Whetham has an open mind, and the text furnishes arguments both for and against State purchase of land and the fixing of a minimum agricultural wage. The manor rolls from which this transcript has been made are written (so we are informed) by an ignorant scribe, and Mrs. Whetham has certainly not succeeded always in deciphering the medieval Latin.

Poems and Translations, 1850-1870. By DANTE GABRIEL ROSSETTI. Together with a prose story, "Hand and Soul." (1s. 6d. net. Oxford University Press.)

This volume of nearly five hundred pages, containing the whole of Rossetti's work except the "Ballad and Sonnets" of 1881, is a welcome addition of the "Oxford Edition of Standard Authors." To Rossetti as a translator full justice has not been done. Pater indeed pronounced his "Early Italian Poets" typically perfect translations, and his "Snows of Yesteryear" from Villon has become a household word; but few have sufficient knowledge of Early Italian to appreciate the fidelity of these versions, or to enter, like the translator, into the spirit of these mystic lovers, the precursors of Dante. The Preface is one of the soundest essays we know on the canons of translation.

A Century of Parody and Imitation. Edited by WALTER JERROLD and R. M. LEONARD. (1s. 6d. net. Oxford University Press.)

This will be a deservedly popular book. It begins with the Brothers Smith, and is well worth the price, if only for the sake of possessing in such a convenient form the "Rejected Addresses" and the "Loves of the Triangles," and it ends with a parody of Tennyson that appeared in this journal. We wish there were more of the last kind, not that we are cracking up our own wares, but because many of the best parodies of the century have appeared anonymously in newspapers and magazines. "Imitation" opens the door very wide, and a long poem like Shelley's "Peter Bell" seems to us out of place. As instances of the desiderata, we may quote at random three anonymous parodies superior to those of the respective poems given in this volume.

"He had a house in Hollywell
Where gargoyles grinned above,
A don whom all knew jolly well,
But ne'er a one did love."

"In China where each word's a root,
And every root a word to boot,
And every mandarin a brute."

"Songs shall inspirit us not from that liar."

Among the last generation of parodists Calverley stands out pre-eminent, and no one has hit off one side of Browning so well as in "The Cock and Bull." The famous "Ode to Tobacco" is tacked on to Longfellow, but there is nothing to suggest a parody. The Notes might have explained that Bacon was the leading Cambridge tobaccoist of the day. In the Latin on page 259 there are obvious misprints—whether Sir Theodore Martin's or the editor's we cannot tell.

How to become a Naval Officer. Revised Edition, 1913. (Grieves.)

This guide supplies all the information that a parent requires who is thinking of entering his son for the Navy, and the intending cadet will find what more nearly interests him—a full account of the life at Osborne and Dartmouth, the hours of work and play, holidays and pocket-money and the beagles. It has the imprimatur of Admiral Fremantle, who vouches for the accuracy of the information. It is unfortunate that the new edition appeared before the new departure of the Admiralty had been announced, and there is no reference to the new order of Senior Cadets, though a limited number had been admitted as a tentative experiment. The book suggests one general reflection: the Navy is still reserved for the upper and middle classes, and sooner or later a democratic Government will be bound to provide, as it has done in secondary schools, free places at Osborne.

School Hygiene. By F. B. DRESSLAR, Ph.D. (5s. 6d. net. Macmillan.)

The author's purpose in this simple and easily read book is to set forth in untechnical language some of the hygienic requirements of school life. It is written essentially for teachers in the hope that they will realize the importance to every child of a wholesome and healthy life during school days. School buildings and their light-

ing, heating, ventilation, and cleaning are carefully dealt with. The dangers of common drinking cups, baths, pencils, and books are pointed out and the means indicated whereby they may be avoided. The treatment of defective and exceptional children is made the subject of a number of chapters and the importance of a regular medical inspection is insisted upon. As an admittedly elementary work the book is excellent, and, although it will probably find more scope for its application in America than in England, yet there is here gathered together a useful fund of information with which every teacher ought to be acquainted. A valuable feature is the bibliography of books and papers given at the close of each chapter in further reference to the subjects treated.

- (1) *The Law of Domestic Servants*. By J. D. CASSWELL. Second Edition. (1s. 6d. net.) (2) *French Law and Customs from the Anglo-Saxons*. Third Edition. (2s. 6d. net.) (Jordan & Sons.)

We would call attention to these instructive guides for everyday use. Servants are always with us, and though death in France or an Anglo-French marriage may be a too remote contingency to provide against, yet a suit against an extortionate hotel keeper or a French railway company for loss of luggage is no uncommon chance. In the first volume a chapter has been added on the Insurance Act as it affects servants. It is written "dispassionately, and without bias." We may, however, take exception both to the bias and the grammar of the concluding paragraph in the second volume: "The French, taking one thing with another, are better off than the British."

- A *Short History of Christianity in the Apostolic Age*. By Prof. G. H. GILBERT. (Pp. viii, 239. 4s. net. Cambridge University Press for Chicago Press.)

The present volume, both in form and plan, is designed as a sequel to the well known "Constructive Studies in the Life of Christ," by Profs. Burton and Sharler Mathews, of Chicago. The same method is followed as in the latter work. At the head of each chapter the sources are given, and it is expected that the student shall study these for himself independently. Then the principal topics are dwelt upon, the salient facts being emphasized. Finally, subjects for further study, arising immediately out of the sources, are indicated. The book is divided into five parts. Part I deals with the Primitive Church in Jerusalem; Part II with the extension of the Gospel to the Gentiles, occasioned by persecution; Part III with the Pauline Mission in Asia Minor, Macedonia, and Greece; Part IV with the last years of the Apostle Paul; and Part V with Christianity in the latter part of the first century. An appendix gives a conspectus of important events of the Apostolic Age. The book is enriched with a number of excellent illustrations, and may be cordially recommended as an admirable handbook for senior classes or for private study.

- Pictures of Palestine*. From Photographs by SOPHIE NICHOLLS. (1s. 6d. to 2s. 6d. net each. Longmans.)

These pictures are enlargements of photographs taken by Miss Sophie Nicholls for the purpose of illustrating Scripture lessons. They vary in size from about 1 ft. by 1 ft. 3 in. to 2 ft. 6 in. by 1 ft. Excellent points of view have been chosen, and such pictures as "The Shepherd of Tekoa" and "The Desert Hills of Judæa" are most effective. Others do not enlarge so well. The Temple area of Jerusalem, for instance, is dazzling and ineffective at a distance. In such cases probably a line-and-wash drawing done from the photograph would have proved more satisfactory. Of course, one cannot help wanting colour, but it is a great achievement to have obtained authentic pictures, and we congratulate Miss Nicholls on what must have been an arduous task.

- Exercises from a New Algebra*. Parts I-IV. By S. BARNARD and J. M. CHILD. (2s. 6d. Macmillan.)

Teachers who use the authors' popular "Algebra," and those who use a different textbook or none at all, will be glad to possess this collection of examples, which may be obtained with or without answers.

- Plane and Solid Geometry*. By W. B. FORD and C. AMMERMAN. (5s. 6d. Macmillan.)

Among recent textbooks of geometry this should take a high place. The first chapter contains a brief course of practical geometry, while succeeding chapters relate to rectilinear figures, the circle, proportion, areas, regular polygons and circles, and the last three to solid geometry. These chapters contain all the material that is usually to be found in textbooks of theoretical geometry, the authors holding to the view that "geometry is and is likely to remain primarily a cultural rather than an informational subject." At the same time, they interest the reader by varied illustrations of geometrical applications to problems of everyday

life. The section on the tangent is perhaps the only one to which objection may be taken—a secant being defined as a line of indefinite length which cuts a circle (without proof that it cuts it in two points) and a tangent as a line of indefinite length which touches a circle in but one point. The diagrams are excellent, especially those on solid geometry. Many of these are shaded, and are thus far less confusing than the line-diagrams which usually appear in English textbooks.

- Arithmetic Papers for Senior Pupils*. Set in Civil Service Matriculation, Higher and Lower Certificate Examinations. With or without Answers. By W. BRAGINTON. (2s. 6d. Macdonald & Evans.)

This collection of questions in arithmetic will come as a boon to candidates for the Lower Civil Service, now to be numbered by the thousand. The answers, so far as we have been able to test them, may be relied on.

- Mathematics, Science, and Drawing for the Preliminary Technical Course*. By L. J. CASTLE, B.Sc. (1s. net. Routledge.)

This textbook of experimental mathematics is written specially for the first year preliminary technical course in evening schools in the north of England. It is and is intended to be of an elementary character, the numerous examples being easy, though carefully planned. The low price of the book should be noted, for it contains a hundred and fifty large octavo pages, and is nevertheless strongly bound and well printed and illustrated.

- The Shorter Modern Dictionary of the English Language*. (1s. Macmillan.)

This is not an abbreviation, but a recasting, of Messrs. Macmillan's "Modern Dictionary" in order to adapt it for younger pupils. In such a work the format is at least as important as the matter, and the clear type, the grouping of words, and the ease with which the pages are turned, at once predispose us in its favour. Moreover, wise discretion has been shown in the words excluded and admitted. Thus, technical terms not in common usage are ignored, and regularly formed adverbs, such as "clearly," are not given. On the other hand, modernisms such as "pragmatism," "syndicalism," "Nationalist," "Tariff Reformer," that a boy will meet with in the daily newspaper, are explained. For pronunciation there are full directions, though diacritical symbols are few, and no attempt is made to indicate the finer shades, as in "girl." Of "cinematograph," which we lately heard pronounced in four different ways at a meeting of distinguished authors, we are only told that the accent is on the first syllable. In "physiognomy" we hear no *g* and in "savour" no *i*; for "envelope" there is no direction, and the moot word, "angina," is not included. "Celt" (the instrument), "welsher," "sibyl," "blackleg" are the only omissions that a pretty careful search has revealed. "Damn," we take it, is barred as a swear word, and *nom de plume* is admitted without a protest.

- English: a Modern Grammar*. By G. H. CLARKE and G. T. UNGOED. (2s. 6d. H. Marshall.)

This is a "Modern Grammar" in more senses than one. It treats English as a living phenomenon and does not attempt to trace its roots in the past or its relations to other languages. In so far as pupils presumably begin with the study of English, and of English know nothing more archaic than the Authorized Version, this is all to the good. It is modern likewise in adopting (with some important deviations) the nomenclature of the Committee on Grammatical Terminology, of which Mr. Clarke was a member. The pupil who proceeds to French or Latin will not be pestered and confused by a new set of terms. The chief departure—the substitution of dependent attribute and modifying, for noun, adjective, and adverb clauses—has been expounded, and in our opinion justified, by Mr. Clarke in an article contributed to this journal. The grammar begins with the sentence and is divided into three parts—the first, simple analysis; the second, an amplification of Part I, with special reference to forms of words or accidence; the third, a full treatment of syntax. Each part might thus supply a year's course in English grammar. The introductory chapter, mainly on errors in English, is not for children and should have come at the end of the volume. The only serious defect that we find in the grammar is that it is not, as it professes to be, inductive. Examples, it is true, come first and the rule follows, but there is no attempt to make the pupil discover the rule for himself. Doubtless the teacher who knows his business will easily supply the missing links and induce the rule. We should have preferred genuine quotations to "cooked" examples. The pupil will ask what on earth is the meaning of "True it is that I receive the general food at first," and we should not be able to inform him. We will add a few random queries as they occurred to us. Page 38: "Adjectives describe nouns or noun equivalents." This is only the preliminary definition, but even here accuracy

requires "that for which the noun stands." Page 43: "The men who went hunting in Africa's son" should not pass as standard English. Page 48: Is *few* in "A few copies are left" an adjective? Page 91: To parse *there* as an accusative in "Let there be no discussion about that" seems to us monstrous. On the same page, under "reflexive verbs," no account is taken of "he sat him down." Page 119: "None" with a plural is classed as a violation of concord, but "One half the world is ignorant how the other half lives" passes muster. To slipshod colloquialisms Mr. Clarke is very indulgent. The split infinitive, we grant, has become a fetish, but we draw the line at "either you or I are," "to no man more than he is due," &c., "he is younger than me," and "like the Gauchos do."

Synthetic Latin Vocabularies. By HEDLEY V. TAYLOR.
(1s. Blackie.)

Lists of common words, averaging about twenty, classed according to meaning. Used judiciously, they might with advantage form part of an ordinary construing lesson, and it would not take more than five minutes to hear them repeated or, better, to test them by sentences. We fail to see why disconnected adverbs and pronouns are thrown in at the end of the lists, e.g. *unde* and *inde* under "kinsfolk." The words are well chosen, and we notice only a few errors or oversights. *Nepos* is never "nephew" in classical Latin—We question *victoriam adipisci* instead of *reportare*. *Pecus* *-udis* is rarely "one of a herd": commonly a flock or one of a flock. Some quantities are wrongly marked—*ūs*, *gradūs*, *rēligio*; and genders are sometimes not indicated, as under *tonitrus*.

SCIENCE, &c.

Physics: an Elementary Textbook for University Classes.
Third Edition. By C. G. KNOTT, D.Sc. (7s. 6d. Chambers.)

This textbook of physics was written originally before the discovery of radium and the consequent development of the new science of radioactivity. The advent of the latter as a branch of knowledge, with its wealth of novel and unexpected results, has made necessary a complete revision of all theories concerned with the constitution of matter. All books dealing with matter and energy are therefore incomplete, and even misleading, unless the phenomena of atomic disintegration are introduced and brought into relationship with previously known phenomena. Realizing this, Prof. Knott has carefully revised his book in the light of recent advances in physics, and has added a new chapter on the Electron Theory and Radioactivity. The result is an excellent elementary account of the various sciences which constitute physics as they are understood at the present day. The order of treatment is somewhat unusual, but, as it tends to correlate the different phases of the subject in a logical and practical way, there is much in it to be commended. The first part of the book deals with matter in relation to energy. The student is introduced to the subject by way of statics and dynamics, gravitation and elasticity. This leads on to molecular physics, which in turn paves the way to the thermal properties of matter and to the transmission of energy in the form of waves through material media. The second part brings in the conception of ether, and on that basis the subsequent treatment of the subject is developed, electricity and magnetism, radiant energy and radioactivity being dealt with. Exercises are appended to many of the chapters, and answers to these are given at the end of the book, where also a useful series of tables of physical constants is to be found. The book may be warmly recommended to students taking the more elementary of University and college courses.

A Textbook of Physics. By R. S. WILLOWS, M.A., D.Sc.
(7s. 6d. net. Arnold.)

The author states that this book was designed to fill what appeared to be a gap in the literature of the subject. One would have thought that there was no lack of textbooks on physics, particularly of the kind to which the attention of students preparing for the Intermediate Examinations of the Universities is usually directed. If there be a "gap," this book cannot be welcomed as having filled it, for it can boast no originality of outlook or treatment. During recent years physicists have made a very notable advance in their understanding of physical phenomena, and even an elementary textbook ought to indicate the new interpretations which are now placed on old facts. To have a true educational value the method of treatment ought to be controlled by modern researches rather than by the syllabus of an examiner. Certainly the exigencies of the latter should not extinguish the former. Dr. Willows's book is written entirely for examination purposes, and it may therefore find favour with certain teachers who prefer themselves to give their students whatever indication they think necessary of the onward march of knowledge. Sound, Light, Heat, Magnetism and Electricity are dealt with much as in the older books, and with them the present volume compares very favourably. It is written and printed

clearly, and the illustrations, which are diagrammatic throughout, are of a bold and simple type such as students ought to be encouraged to draw when making lecture or laboratory notes.

A Course in General Chemistry. By W. MCPHERSON and W. E. HENDERSON. (10s. 6d. Ginn.)

It is rare enough for a textbook of chemistry to show any originality of arrangement; and it is more rare to find a new treatment that is justified by the result. In spite of the disclaimers and the modest assurance of the authors of the book under review, we believe it to have succeeded in both these departments.

Profs. McPherson and Henderson have not attempted to produce an exhaustive work, and, unlike the majority of textbook writers, they have not kept their book small by the simple, bad, expedient of random pruning. On the contrary, it shows a very careful discrimination, and gives a quite unusual impression of orderliness.

Chapters upon the physical considerations necessary to an understanding of chemical processes are intercalated between the more purely descriptive parts of the book. As an example of this method one finds that after a description of nitrogen and an account of its discovery the discussion of its compounds is postponed until the inert gases, the atmosphere, solutions, ionization, neutralization, valency, and structural formulae have been dealt with. Apart from a few persistent Americanisms, that can be readily forgiven, the book is well written, and it can be recommended as a trustworthy introduction to the science with which it deals.

A Textbook of Physics: Properties of Matter. By J. H. POYN-
TING, F.R.S., and Sir J. J. THOMSON, O.M., F.R.S. Sixth
Edition. (10s. 6d. Griffin.)

It is a well deserved compliment to the eminent authors of this book that the demand for it has necessitated the issue of six editions during the comparatively short time which has elapsed since its original publication. The work, which forms the first volume of a series by the same authors, is too well known to require here more than a passing notice of its reappearance. Few alterations have been made, but important notes have been added here and there to the text. The authors deal with mass, weight, and gravitation, and with such of the properties of matter as relate essentially to change of form, e.g. elasticity, viscosity, surface tension, diffusion, and solution. The volumes dealing with Sound and Heat respectively have also run through several editions, but those on Light and Magnetism and Electricity have not yet appeared. Their publication is awaited in keen anticipation of the same masterly treatment as that which has made their forerunners so invaluable to all students of physics.

COLONIAL AND FOREIGN NOTES.

FRANCE.

To study from without education in France at present is like watching a fight represented on the screen of a cinematographic theatre. You get thrills from the blows without hearing the moans of the combatants. Church and State thrust and parry; it is the Church that suffers the pain and, so far as the outside world is concerned, mutely, for the voice of lamentation dies away at home. We often wonder with which side our readers (Catholic readers excepted) are more in sympathy. Let them probe their feelings with this story, of which use was made in the recent debates. A child was reading a (Catholic) Church catechism in the school playtime, when a teacher pounced on him and confiscated the book. For expostulating with the teacher in somewhat too vigorous terms the mother of the child was sentenced by a Versailles magistrate to a month's imprisonment *sans sursis*; for, sighs a Clerical journal, *les instituteurs sont plus sacrés que jamais*.

Of the debates just mentioned, we have the outcome in the **Attendance; Defence of the Lay School.** "Texte du projet de loi sur la fréquentation scolaire et la défense de l'école laïque," as it was adopted by the Chamber of Deputies. Attendance of the school is not good in France. Let us see what measures are proposed to improve it. The Bill orders that, when a child has been absent from school four times in a month, for at least half a day and without recognized cause, the primary Inspector shall send a list of the absences, with comments, to the *juge de paix*. The *juge de paix*, having studied the case in the light of all its circumstances, will, if it seem proper, recommend the condition of the parents or guardians to the kindly attention of the Local Authorities. If it be expedient, he will send the parents or guardians a warning (without cost) and a notice of the penalties that the law will impose in case of a new breach of it. Should the offence be repeated in the twelve months that follow the warning, the *juge de paix*, informed of it by the primary Inspector,

will cause parents or guardians to appear in open court, and will fine them from 1 to 5 francs. In the event of another offence in the ensuing twelve months, the offenders will be liable to the police penalties formulated in Art. 479 of the Penal Code; but sentence to imprisonment may not be pronounced. It is the tenderest-hearted legislation in the world. Now look at the *défense laïque*. Article 21 of the Bill runs thus: "Whoever, by violence or threats, by causing them to fear loss of employment or damage to person, family or fortune, shall have induced the parents or other persons responsible for a child to keep that child from taking part in the regular exercises of the public school in which he is enrolled, or from using the books ordinarily used in it, will be punished with imprisonment for from six days to one month and a fine of from 16 to 500 francs, or with one only of these two penalties." The weapon is sharp; but the quarrel in which it is drawn is not ours; we report of it as impartial historians.

France and Scotland are renewing an old intimacy in a new mode. By an agreement between the University of Bordeaux and the University of St. Andrews Dr. T. Pettigrew Young, Professor of the French Language and Literature at St. Andrews, will in May repair to Bordeaux and take the place of M. Charles Cestre, Professor of English Literature in the Faculty of Letters. M. Cestre, on his part, will undertake the courses of Dr. Pettigrew Young in the University of St. Andrews. Moreover, the French Minister of Public Instruction has commissioned M. Cestre to deliver a series of public lectures in various towns of Scotland and England. In both countries the visitor will be welcome as bringing good gifts. If we look to Germany for erudition, it is from France that we get models of lucidity, method, and literary grace.

GERMANY.

"Pedagogue" was a term of contempt and pedagogy was naught. Then opinion shifted and the Universities saw that they must teach a science which so many were eager to learn. At München a Professorship of Pedagogy has lately been established and the famous Fr. W. Foerster called to fill it. He is not yet at work; but no less than ten *Dozenten* are lecturing this winter on pedagogic themes. Not only are such abstruse subjects as "The Problem of the Freedom of the Will and its Significance for Morality, Law, and Education" being treated; there are also lectures on anatomy and physiology for teachers of gymnastics, and practical exercises in the teaching of history. Berlin offers still more, and on its program are courses on "Experimental Pedagogy (with demonstrations and the discussion of recent discoveries in experimental psychology and pedagogy)," "How to teach Classics in the Gymnasium," "Influence of modern School Instruction on the Organism of the Child," and "Philosophy in the Scheme of the Higher School." On what system theology is taught in English schools it were hard to say. A German University will instruct the future teacher how to teach it. Thus at Leipzig he may attend a *Seminar* for practical theology, in which the methods of religious instruction and of religious education (two different things) are studied. Leipzig lays stress on experimental psychology and pedagogy. Yet it does not neglect the history of education; for on its winter list of lectures there are inscribed courses on "The Pedagogy of Plato and of Platonism," and on "The Pedagogy of Rousseau, Pestalozzi, and Herbart." Tübingen is also active for education. Its professors and *Dozenten* are discoursing, for example, on "The Development of Thinking in Childhood and Youth (with experiments)," "The History of Pedagogic Ideas and of Education," "Public Hygiene, especially for Teachers in Higher Schools," and "The History and System of Secondary Education in Germany." Not alien to our topic is it to mention here that the Psychological Society of Berlin is offering a prize of 750 Mk. for the best essay on "Relations between the Intellectual and the Moral Development of the Young."

The *Deutsche Lehrer-Zeitung* (xxvii, 15) brings a grave charge against us: we are seeking to exclude Germany from her "place in the sun" by grudging her a place in the map. England, it seems—America following her example—has been flooding China with School Atlases which show England covered with cities, whilst in Germany only Heidelberg and another small town are marked. A similar course, remarks the German journal, has been pursued in India for a long time. Nor is it enough to represent Germany as an almost uninhabited land; she and her ally Austria are sometimes quite obliterated. A schoolbook in the Cantonese dialect, which has appeared in several editions, gives a list of European States in which there is no mention of either Germany or Austria. It is very cruel, is it not? We fear, however, that such reticence will not keep the Chinese from knowing that Germany exists. And as to Atlases, all

have their weaknesses. In a map of the British Isles, Stieler's (German) "Schul-Atlas" (1888) marks insignificant places in Ireland, but not Barrow-in-Furness in England. Is that to hide its existence from American cruisers?

Some students of Comenius may have overlooked the news that Prof. Dr. Ivan Kvacala, of Dorpat, has discovered a hitherto unknown work by Amos Comenius. It is entitled "Continuatio Admonitionis fraternae Joh. Comenii ad J. Maresium." Among other things, it explains for the first time how his relations with Samuel Hartlib began: Comenius made the acquaintance of Hartlib's brother George at the University of Heidelberg.

BELGIUM.

What Belgium has been doing for education the daily newspapers, with which in news-bringing we cannot compete, have related in due course. There comes further proof of quickened zeal in the form of a new journal, the *Revue de Pédotechnie* [Larmertin, Brussels], to appear six times a year under the auspices of the Belgian Society of *Pédotechnie* and the Jean-Jacques Rousseau Institute of Geneva. *Pédologie* is the science of the child, utilizing in its investigations the results of physiology, psychology, and sociology; *pédotechnie* is an applied science, which, guided by *pédologie*, seeks out the practical means of promoting the normal development of a human being from the moment of conception until adolescence is over. Eugenics, now the centre of so much interest, is a branch of *pédotechnie*. The first number of the *Revue* contains papers on "Les notes scolaires ont-elles une valeur pédotechnique?" "Les classes homogènes et l'examen mental par la méthode des tests de Binet et Simon," and "L'enfant et le cinéma." In later numbers will be published many studies of the Belgian Society and of other scientists engaged in investigating the culture of the child.

UNITED STATES.

If we said that apathy and sloth reigned perennially in Whitehall, and that the American Bureau of Education was as alert as the English Board is sluggish, we should be deemed to be lacking in that high patriotism which sees in every foreign country a foil for the splendour of one's own. We refrain then from saying it. Let us, however, state some facts relevant to purposes of comparison. We strive to interest the public in Continuation, and urge that this and the kindred subject of Vocationalism should be studied imperially. Comes a packet of pamphlets from the Board of Education relating to imperial conferences and marked "for official use," of which kindness can say only that they seem to be un-useful to anyone. The Board of Education gives no sign that it understands these subjects. The United States Bureau of Education decides quickly that American teachers must study them for themselves at first hand. Where best? At München, under Director Kerschensteiner and Assistant Inspector Schmied. Presently there appears a circular stating that "the city of München, Germany, has agreed to permit a certain number of American teachers of manual training and industrial subjects to study in the Continuation schools of that city their underlying principles and their relation to the life of the city. The fees will be at the rate of fifty cents a week, or about 6.50 dollars for an entire course. The number of students to whom this opportunity is offered is limited to twenty-five." Even in far Salt Lake City the superintendent bids his teachers "Up and to München!" Thither too at last our Minister of Education and the Permanent Secretary have gone.

It were trite to say that English is of all subjects the most neglected in English schools. In the United States, as we observe with pleasure, the study of it is being intensified, and the *English Journal* (University of Chicago Press) quickens and helps the teacher. What is demanded of him by modern methods of instruction is set forth in an article (iii, 2) on "The New and the Old in the Teaching of Literature." He must have imagination, an eye and ear for the concrete elements in the poem, and the power to see it vividly and to make it vivid for the pupil. Again, he should be able to read in such a way as to bring out the emotional elements in the passage that he is handling; for it is only through the voice that the spiritual essence can be communicated from teacher to pupil. A third requirement is that he shall have good judgment as to what to interrogate the student about and skill in interrogation. His aim with his questions must be less to elucidate obscure phrases and to indicate figures of speech than to interpret the author's thought and feeling. Another article, headed "How we use our School Library," shows us, among other things, how they deal in America with the girl who "hates to read." She is sent to the librarian with a

note requesting his best efforts on her behalf. Perhaps she is first induced to read a very simple child's story, such as "Emmy Lou" or "Rebecca of Sunnybrook Farm," the librarian tempting her by narrating an amusing anecdote from it. When she returns the book he draws from her a frank expression of feeling, which becomes his guide in recommending a second book. The transition to more valuable literature is often made through the human interest of biography; and Helen Keller's Autobiography, Louise Alcott's Life, or Agnes Repplier's "In Convent Days" is discovered to be quite as interesting as the world of fiction. In fact, biography seems to be the key to much that is best in the high-school girl. Besides the examples already mentioned, the Lives of Alice Freeman Palmer, Mary Lyon, and Carla Wenckebach are in constant use, a demand for them being created in the public libraries by the interest of the girls. She who once "hated to read" may soon be tempted to study Scott in Lockhart and Thomas Arnold in Stanley. The secret is to awaken her interest in literature through her innate sympathy with human life.

What are Souvenirs? American journals are advertising them under the rubric "When School Lets out," which means in our vernacular "At the End of Term," and recommending them thus:—"To

give your scholars Souvenirs at the close of school is a delicate bit of diplomacy. It endears you to the scholars, pleases the parents, and gratifies the School Board. The members of a School Board congratulate themselves upon their good judgment when they find that they have engaged a teacher who is popular with the community. The Souvenirs are described by those who vend them as "achievements in the art of engraving and printing." The mode of production is this. On a sheet of paper the word "Souvenir" and a symbolic design (books, a globe, and a lighted lamp) are embossed either in silver or in gold. A red ribbon is furnished when gold is used, a green with silver. Underneath the symbolic design is printed a stanza of poetry: "The school is out, Vacation's come," &c., or "Memory like the ivy clings," &c. A photograph of the teacher or of the school building may be "tipped" on the Souvenir. With photograph, a dozen specimens cost 1.15 dollars; without, only a dollar; at which moderate rates it seems that the publishers have been doing business with many teachers continuously for fourteen years. From the old-time school our boys brought away the souvenirs on their backs; to-day, if the teacher would keep himself in the memory of his pupils, he should seek to do so by kindly acts, not by the gift of a tawdry advertisement.

We are always suspicious as to the provenance of "Howlers."

"Howlers" from California.

Do not many of the finest owe their origin to the wits of the Common Room? It is to this source that we should be disposed to refer the old, admired specimen: "'If I had served my God as I have served my king'—last words of Oliver Cromwell." The Los Angeles Times publishes a collection furnished by Prof. Watts Eaton Hughes, of the Southern California Abnormal School, and guaranteed to be from recent examination papers. Sometimes a little Greek would have been serviceable to the candidates—to him, for instance, who wrote "Monarchy is that state in which a man has but one wife," and to the author of the definition, "Gastronomy is the study of stars and heavenly lights." Pure ignorance was responsible for this: "The nebular hypothesis is a bright light sometimes seen in the northern sky," and for this: "The Nihilists are the people of the Nile country." A delightful confusion of thought is apparent in the statement that "Joan of Arc was the wife of Noah"; and in the bold assertion, made by one who must have heard fishes called the "finny tribe," that "The Diet of Worms was the Finnish Parliament." Strange bitterness in the youth who put: "A misanthrope is a man who marries his own wife"! A young scientist, being asked what the "law of gravity" was, replied: "The law of gravity is twenty miles an hour in California," and so broke the gravity of the Examining Board.

THE PUNJAB.

The Report from the Punjab is of brighter colour than that of Indian Reports in general. Thus we read of "continual and rapid development in almost every direction"; and thanks to liberal grants

made by the Government of India, the expenditure on education in the year under report was 84½ lakhs, or 15½ lakhs more than in the preceding year. In the qualifications of teachers in primary schools, owing to an improvement in pay and prospects, there was a substantial advance to record. A new normal school was opened at Lyallpur. With singular satisfaction we observe that the Report shows a further increase of 10 per cent. in the attendance of pupils in girls' schools. The Lahore Normal School, where women teachers are trained, was overcrowded.

UNIVERSITIES AND SCHOOLS.

LONDON.

A number of questions have been asked in Parliament in regard to legislation affecting the University of London. Mr. Asquith has expressed the opinion that the reconstitution of the University should form the subject of special legislation in preference to being included in a comprehensive Education Bill. As to the future position of external students, the upshot of several questions and answers appears to be that the recommendations of the Royal Commission, which, it will be remembered, contemplated some limitations of the present system of external degrees, were not binding on the Departmental Committee of the Board of Education. Mr. Pease stated in reply to a question from Mr. Rowlands that he had "every reason to believe that the Committee appreciate the importance of devising arrangements which will make adequate provision for the continuance of external degrees."

The annual report of the Military Education Committee, published in the *Gazette*, records the continued prosperity of the Officers Training Corps. A War Office return for the period July 1908 to September 30, 1913, shows that 534 Certificate A and 164 Certificate B have been gained by cadets, these numbers being larger than for any other contingent. During the same period sixty cadets proceeded to commissions in the Special Reserve, this number also being larger than for any other contingent. Reference is made in the report to the developments in view in regard to the organization of military education in London. The strength of the contingent at the end of 1913 was 26 officers and 918 cadets.

The policy of the London Education Committee in regard to Mr.

School Attendance.

Denman's School Attendance Bill appears to be based on financial rather than on educational considerations. To raise the school age for London children to fifteen by by-laws, as suggested by the Bill, would involve a capital expenditure of nearly two million pounds, and an additional annual charge of about a quarter of a million. Exemptions may, however, be granted under the Bill on account of beneficial employment or under conditions such as attendance at continuation classes. To meet the financial difficulty, the Council ingeniously proposes that attendance should be optional up to the age of six—a year later than under present conditions; and at the same time a threat of passive resistance has been adopted until adequate provision is made by increased Government grants for all education purposes.

OXFORD.

Two important amendments to this Statute were passed in Congregation on March 3, one allowing for the

Responsions Statute.

principle of compensation between subjects, and the other providing that the supervising examiners should be members of, and appointed by, Convocation. The second amendment obviates what was felt by many to be a serious constitutional objection to the Statute, that it took the control of the examination out of the hands of the University. The first prevents the increased number of subjects being only an additional burden. How it will work out in practice will depend of course on the examiners and the custom of the examination, but most of those who have examined in Responsions admit that it is a great defect of that examination that compensation is hardly recognized, even between different papers in the same subject. Other amendments proposing to lessen the number of subjects required were rejected. Opinion in Congregation seems to have been growing in favour of the Statute, and it will probably pass safely through Congregation and Convocation next term.

The statute for the reform of the constitution of the Hebdomadal

Reform of Council.

Council was rejected in Convocation by 97 votes to 83. There has been all along a determined opposition to it on the part of the Professors, who thought with some justice that they were being hardly used, and no very great enthusiasm for the Statute. Council has now offered Congregation almost every possible proposal for the reform of Council, and it is probable that nothing more will be done. It is possible that the proposal to have three Heads of Houses, six Professors, and nine members of Convocation may be revived. The great practical objection to the present scheme is that it is often difficult to get as many as six heads of houses to serve. The number of Professors, Readers, and of members of Convocation has largely increased since Council received its present constitution, while the number of Heads of Houses of course has not.

CHERWELL HALL.—Nine students entered for the Examination for the Cambridge Teachers' Certificate in December last, all of whom passed, two being placed in the First Class, five in the Second Class, and two in the Third Class. One student obtained Distinction in the

History of Education. Miss Halstead obtained the Geography Diploma of the University of Oxford.

WALES.

Carnarvonshire Schools. A special committee of the Carnarvonshire Education Committee has issued a report on the work of the Intermediate Schools in the county. In their opinion too much is attempted in the schools, and the curriculum is so wide that in many cases the children went away in a state of bewilderment. Two-thirds of the children only remained in the school for three years, and one of the main recommendations of the committee is that a more effective course of education be given to the children for the three years. It is also proposed that no grants be made to any schools, except the Carnarvon and Bangor Schools, for work beyond the standard of the Senior Certificate Examination of the Central Welsh Board.

It is on the above lines that the special committee hopes to extricate the schools from the somewhat serious financial difficulties in which some of them have become involved, and it is only as a last resort that the County Council is to be approached to levy an additional rate for the relief of the schools. Now it is not easy to criticize a report of this kind without further acquaintance with its details, but it is, at any rate, perfectly obvious that it is drawn up in the interest of the rate-payer, and not with the view of promoting the efficiency of the schools. Rather than provide the necessary funds in order to enable the schools to do their work under proper conditions, all kinds of futile expedients are recommended by the Committee. For example, let us consider briefly the proposal to concentrate all the advanced work in two schools. This is surely a matter on which the parents have a final voice. Are they likely, for instance, to allow their boys and girls at the ages of sixteen or seventeen to reside in lodgings in a strange town? The majority will probably object very strongly to the plan. And further, how under the system of travelling bursaries is there to be any saving in expenses? The distance from South Carnarvonshire, for instance, to Carnarvon is so great that travelling daily by train is out of the question. The bursaries will therefore have to be of a very substantial character to maintain the boy in lodgings, as well as to pay his school fees. And has the committee considered the educational effect on the schools of this suggested migration? Any experienced teacher will at once tell them that it is likely to be most prejudicial to their efficiency.

The other main suggestion is that the curriculum should be limited in character. What subjects do they propose to omit? and have they considered that the schools are liable to lose their Secondary Schools Grant if they do not conform to the regulations of the Board of Education as regards curriculum? This, again, is an impractical recommendation, and the scheme, as a whole, must impress any one who has any experience of secondary work as very crude and uneducational. In Wales all the intermediate schools, owing to their isolated position, are practically compelled to do work of the highest standard usually attained in Secondary Schools, and they cannot neglect this duty without inflicting a serious injury on the pupils in their immediate neighbourhood. It has been accomplished in the past without any undue strain on the resources of the schools, either in time or money, and to endeavour to suppress it in any school, however small, is to take a retrograde step.

The University of Wales. The critic of Welsh Educational Institutions is apparently irrepressible. No sooner has he finished his castigation of the Central Welsh Board than he turns his lash on the University itself. There is Mr. E. T. Jones, M.P. for part of Denbighshire, for instance, who has been vigorously assailing the University College, Bangor, and its staff for their "alien" sympathies. We are not aware that this gentleman has ever done anything in the way of constructive educational work, but there is no doubt he can "say things." As the great apostle of "Home Rule for Wales," he probably thinks that the more he decries existing Welsh institutions the clearer will the necessity for his pet hobby be seen. Then we have lately been mildly interested in a suggested reform of our University system put forward by such prominent educationists as Mr. E. R. Davies, the Secretary to the Carnarvonshire Education Committee, and Dr. Austin Jenkins.

The scheme contemplates the remodelling of the curriculum and staff at each of the three University Colleges, and while each College would continue to give instruction up to the stage of an ordinary pass degree in Arts and Science, it would be restricted to some specified sphere or subjects for honours and research work. A half-penny rate throughout the whole of Wales for University purposes would be levied, and an elective representative council, with "a working head" (*sic*) would control the University. There are more proposals of the same character in the scheme, but as no one has taken it seriously it is not necessary to describe it further. Principal Roberts, in an interview on the question, rightly states

that no action of any kind should be taken until the most elementary facts as to the work of the University have been ascertained. For the proposers of the change are apparently quite ignorant of the extent of the service the University has rendered to Wales. The result of an investigation into its achievements, the Principal claims, would reveal such a record of progress as would increase tenfold the pride of Wales in her University and double the number of students in five years. This scheme, as already stated, has no influential support, so that any further discussion of it would be merely of academic interest.

Mr. A. T. Davies, the Permanent Secretary of the Welsh Department, was present at the opening of the new technical wing of the Llanrwst County School. The addition of a technical side to the school, he said, would help to correct the tendencies which some districts in Wales unhappily suffered from towards an education which was too bookish, too uniform, and too impractical. Mr. Davies also referred briefly to the relation of the Welsh Secondary Schools to the Welsh language. The Welsh Department was animated by the utmost sympathy with Welsh aspirations, and it could not honestly be stated that they had been hostile or indifferent to the mother tongue. We think that it is also just to state that the Intermediate Schools have done excellent work for the promotion of Welsh, and that Mr. Davies need have no fear as to its position in their curriculum.

The Chief Inspector of the Department, Mr. O. M. Edwards, has also been expressing his views very forcibly before the Swansea Education Committee on the teaching of Welsh in their Elementary Schools. Unless satisfactory provision is made for its inclusion in the time table of all the schools the Department will make a substantial reduction in their grant. This threat will probably force the Committee to come to a definite decision soon, though it has had the effect of hardening the hearts of some of the most doughty opponents of Welsh teaching.

The Students' Representative Council at Bangor College are making proposals of a far-reaching character. In the first place they are asking the Senate to consent to submit for their consideration all proposed regulations on other than purely academic matters. This will assure that the students' view of such matters is thoroughly understood by the Senate. The other suggestion is that there should be consolidation of the students as members of a national University, and not of three isolated Colleges.

SCOTLAND.

Carnegie Trust Annual Report. The annual report of the Carnegie Trust is concerned mainly with results of the Trust's Endowment of research and with the quinquennial distribution of grants to the Universities and extra-mural colleges. The reports of Dr. J. J. Dobbie, Prof. James Ritchie, and Prof. Hume Brown on the work done in the various departments of research emphasize not merely the value and success of the work, but also the effect which the research scheme of the Trust has had on the whole academic life of Scotland, by stimulating a spirit of research such as did not previously exist. While a large part of the work of the Fellows and Scholars is done in Continental Universities, the reputation of the British Universities is attracting the beneficiaries in ever-increasing numbers. Most of the Fellows who have completed the tenure of their Fellowships or who have resigned have received academic appointments at home or abroad. Many of the scholars have received academic, school, hospital, and other appointments; others have obtained technical, industrial, official, and other posts, and a considerable proportion are continuing their research work under the Trust or some other institution. During the last five years the Trust has spent over £35,000 on Fellowships, scholarships, and grants, as compared with over £27,000 in the previous five years. On the suggestion of Prof. Hume Brown that "something should be done to stimulate more generally an interest in research" in history, economics, and literature "among graduates whom circumstances have prevented from applying for Fellowships or Scholarships," the Trust has resolved to offer a prize of £100 for annual award, for the best essay or thesis on a subject within these departments. The Prize is open for competition among graduates of the Scottish Universities, who have not been Fellows or Scholars under the Trust. Award will be made only where the essay is judged worthy of publication as an original contribution to learning. Essays must be lodged on or before April 15, 1915. The laboratory of the Royal College of Physicians at Edinburgh, which has been for the last five years financed by the Trust along with the Colleges of Physicians and Surgeons, is to be merged in a Lister Institute of Medical Research, under the control of the University of Edinburgh and the Colleges. To the fund for the provision of this Memorial Institute, the University, through the assistance of the Trust, is contributing £10,000 and the Colleges are giving £15,000.

During the eleven years ended in September 1913, the Trust has

contributed in grants to the Universities and extra-mural Colleges a sum of £454,000, of which there were allocated to libraries £43,500, to buildings and permanent equipment over £203,000, and to teaching over £207,000. The assistance which the Trust has thus given has resulted in the partial or complete endowment of seven lectureships in St. Andrews, two chairs and five lectureships in Glasgow, one chair and six lectureships in Aberdeen, and seven lectureships in Edinburgh. The grants for the next five years will amount to £198,250, being £21,250 for libraries, £160,250 for buildings and equipment, and £16,750 for teaching. The grants to individual Universities during the next five years amount to £37,500 for St. Andrews, £40,000 for Aberdeen, £50,000 for Glasgow, and £52,500 for Edinburgh. The grants to extra-mural Colleges at the various centres amount to £16,250, nearly the whole of which goes to Edinburgh and Glasgow. The greater part of the St. Andrews grant is devoted to replacing capital expenditure on buildings, &c., in recent years. The Aberdeen grant will be expended mainly on the new buildings at King's College and the endowment of three lectureships. The Glasgow grant is almost entirely devoted to the provision of new buildings for the Faculty of Arts and the Zoology department. The grant to Edinburgh is also to be spent almost entirely on buildings and equipment. The Trust adheres to its resolution to endow lectureships, &c., rather than to provide annual income, and it issues a warning that, in the allocation of grants to the various Universities, it will not be bound to anything of the nature of a fixed proportion between the Universities or University centres. The whole report, which makes a volume of nearly two hundred quarto pages, is full of interest to the teachers and graduates of the Universities.

A movement has been initiated for the organization of post-graduate medical teaching in Glasgow. Hitherto such teaching has been sporadic, as it is in many of the British centres of medical education, and in consequence sufficient advantage is not taken of the wealth of clinical material in the hospitals of a great industrial community. At a meeting called by the University a committee, representative of the University, the extra-mural schools, and the various hospitals, was appointed to arrange for co-operation in the provision of post-graduate teaching. The Liberals have chosen as their candidate for the Lord Rectorship Lord Strathclyde, the Lord Justice-General of Scotland. As a Commoner he was Mr. Alexander Ure, the Lord Advocate, and he is a graduate of the University. The Conservatives have not yet announced their candidate.

Professor Matthew Hay submitted a very satisfactory financial report to the University Court at its March meeting. The surplus revenue of the general fund was about £2,500, more than three times as much as in 1910-11. There has been a steady growth in the number of students, resulting in a progressive increase in the revenue from fees. New buildings are to be provided at King's College, at a cost of not less than £20,000, towards which the Carnegie Trust is giving a large grant. A scheme of pensions for lecturers is in contemplation, as well as the provision of an adequate curriculum in forestry and a new botanical department. Under the research scheme of the Carnegie Trust the teachers and graduates of the University have during the last ten years received an average of £1,250 a year. Prof. Hay has, to the great satisfaction of the University, resolved not to accept the position of Secretary to the Medical Research Committee. It is understood that the Business Committee of the General Council has unanimously resolved to recommend to the Council the election of Lord Haldane as Chancellor of the University, in succession to the late Lord Strathcona. By an arrangement between the University and the Aberdeen Provincial Committee, Dr. George A. Williamson, lecturer in hygiene under the Committee, has been appointed lecturer in tropical diseases at the University. Among those on whom the Senate has resolved to confer the honorary degree of LL.D. at next graduation are the following:—Mr. John Cook, late Principal of Central College, Bangalore; Dr. Peter Chalmers Mitchell, Secretary of the Zoological Society; the American Ambassador, Mr. Page; Prof. Karl Pearson; and Sir Benjamin Robertson, Chief Commissioner of the Central Provinces, India. The degree of D.D. is to be conferred on the Rev. Herbert Workman, Principal of Westminster Training College.

Owing to the death of Lord Minto there is a vacancy in the Lord Rectorship of the University. The election of a new Lord Rector will take place in October. An attempt is being made to have a non-political contest, but it does not seem likely to succeed. There is also a suggestion that the Women's Suffrage and Fabian Societies should unite in nominating a candidate. The Speculative Society celebrated its one hundred and fiftieth anniversary on March 6 by a dinner, with Sir Ludovic Grant as chairman. Prof. Laird, of Belfast, as Shaw Fellow in Philosophy, has delivered a course of lectures on "Problems of the Self." Mr. Robert Leslie, M.A., formerly

Assistant in Political Economy at Edinburgh, has been appointed Professor of Political Economy in the South African College, Cape Town. Mr. Thomas M. Finlay, M.A., B.Sc., has been appointed University Lecturer in Palaeontology.

At a meeting of the Edinburgh Provincial Committee, the chairman, Prof. Darroch, gave some explanations regarding the diploma and degree in education which are about to be instituted by Edinburgh University. He said that the regulations which are under consideration involve five distinct principles. The degree is to be distinct from the Arts and the Science degree—"over and above" these degrees. The University and the Training College are to act together in certifying candidates for the degree and diploma. The University is to certify the theoretical qualifications of the candidates, the Training College their practical qualifications. Candidates should give evidence of having undergone a course of instruction in the new experimental methods of dealing with educational problems, in addition to the more usual practical courses. There are also other provisions, which, as reported, are rather difficult to understand; but apparently there is to be the possibility of a break in the course for the degree, during which the candidate may serve for some years in a school, and after which he may return to complete his course, with the advantage of his actual teaching experience. The proposed regulations will probably be published soon.

The Provincial Committees are in course of making arrangements with the Carnegie Dunfermline Trust, by which it will be possible for men students, who have completed a course, including physical exercises, for the General Certificate, to take an additional year of training in physical exercises and methods at the Dunfermline College and gain a qualification as instructor in physical training of the same value as that which is given to students who have undergone a two years' course at a physical training college. Those who at present qualify as special teachers of physical exercises are almost all women, and it is hoped that by this new arrangement many ordinary men teachers may be induced to improve their qualifications for giving such instruction. The Edinburgh and Glasgow Committees are also conferring on the question of a suitable scheme for the training of teachers of the deaf. The demand for such teachers in Scotland is greatly in excess of the supply.

The Chief Medical Officer under the School Board of Glasgow in his fourth annual report gives many interesting statistics, of which the most remarkable is the information that the underfed and ill-clad children reported by the school doctors in 1912-13 numbered 256, as compared with 363 in 1911-12, 646 in 1910-11, and 1078 in 1909-10. This decrease can hardly be all due to prosperous trade, and it may be surmised that a great deal of it is the indirect result of inspection.

IRELAND.

The following appointments have been recently made in Universities. College, Dublin:—Professorship of Music, Rev. Heinrich Bewerunge; Dublin Corporation Professorship of Irish Music, Mr. Robert O'Dwyer; Dublin Corporation Lectureship in Municipal History, Mr. John Webb, M.A., LL.D.

In Queen's University, Belfast, Mr. Robert T. Beatty, M.A., D.Sc., has been appointed Lecturer in Physics.

The Donnellan Lectures in Trinity College were this year delivered by Dr. D'Arcy, Bishop of Down and Connor, who gave four lectures during the week, March 9-16, his subject being "God and Freedom in Recent Philosophy." The lectures, which covered a large field, from post-Kantian developments down to Bergson (to whom the last address of the series was mainly devoted), attracted large audiences, the general public being well represented.

An interesting debate was held in Trinity College on the evening of February 25, between representatives of the Edinburgh University Union and the College Historical Society, Mr. Justice Ross being in the chair. The subject was: "That this House views with concern the interference on the part of the South African Government with the liberty of the subject," and the negative carried the day by a large majority.

The Irish Women Graduates' Association held a General Meeting (by kind permission) in University College Buildings on the afternoon of March 20, when the chair was filled, during the first part of the meeting, by Dr. Isabella Mulvany, the outgoing President, who has found it necessary after many years of valuable and indefatigable service to resign her office; and during the second part by her successor, Prof. Mary Hayden, M.A. In outlining the possible work of the Association in the future, Miss Hayden drew attention to the fact that in Mr. Birrell's scheme for the £40,000 grant, the minimum salary for women teachers had been fixed at £80—two-thirds of that

'DUSMO'
The Dustless Sweeping Powder

A TESTIMONIAL FROM BANGOR.

I want for this College 6 cwt. of DUSMO, 5 cwt. for uncarpeted floors and 1 cwt. for carpets. I find it **MOST EXCELLENT**, and should be glad if you could send what I require, or anyhow some of it, as soon as possible.

The removal of dust prevents the spread of infection. — Keep your School healthy by the use of 'DUSMO.'

**PRACTICAL.
EFFICIENT.
ECONOMICAL.**

'DUSMO' can be used any and every day of Term. The Schoolroom is available immediately ; there is no tedious drying or 'dusting' to wait for.

'Dusmo' is the cleanest, quickest, and most economical sweeping powder for effectively freeing your school from dust. *Dust simply can't exist where 'Dusmo' is used.* It is manufactured in two forms—'Dusmo' for use on carpets, and 'Dusmo' 'B' especially prepared for use on wood, linoleum, stone or marble floors. 'Dusmo' contains no oil or grease, and is disinfectant.

**DUST CANNOT RISE.
THE FLOOR IS SCOURED.
RESULT: A CLEAN SWEEP.**

The 'Dusmo' method *absolutely* prevents the dust from rising and removes it. When the accumulated dust has been absorbed the quantity of 'Dusmo' used daily is very small, and the cost would be even *cheaper than sawdust*. The old method of using water or damp sawdust coagulates the dust, leaving it sticking to the floor to return to dust again when dry.

DUSMO COMPANY, LTD.,

LONDON, E.C.**

required for men. As things stand at present in this country, it is generally women only, not men, who take up teaching as a life-long profession and prepare for it by training.

The same feature in Mr. Birrell's scheme was also brought forward in the inaugural address delivered at the Annual Meeting of the Dublin Education Society, at the close of last month, by the newly elected President, the Rev. H. Irwin, Head Master of Wesley College, Dublin. There seems to be a growing conviction on the part of men and women alike that the only principle which, in the long run, works justice to both sexes, is the principle of remuneration according to the nature and quality of the work done, without regard to the sex or individual circumstances of the worker.

The Annual Meeting of the Central Association of Irish School Mistresses, which was held on the evening of March 13, in Alexandra College, under the presidency of Miss H. M. White, LL.D., also devoted a good deal of attention to the £40,000 grant—more particularly to the part of the scheme which deals with registration. Miss Tremain, B.A., Head of the Training Department in Alexandra College, read a paper on registration, in which she urged Irish teachers to see to it that Ireland was brought under the scope of the Registration Bill for England and Wales. An interesting lecture on "The Education of the Schoolgirl a hundred years ago," by Prof. W. Trench, of Trinity College, formed part of the evening's proceedings.

The Belfast National Teachers' Association held on March 21 a special meeting to consider the recent report of the Viceregal Committee, at which there was a good deal of vigorous talking. Strongly worded resolutions were passed calling on the Board to carry out the recommendations of the Committee with the least possible delay, and to take steps to secure more harmonious relations between the teachers and the inspectors and other officials; also demanding that the case of Mr. Mansfield, of Thurles, should be immediately reconsidered with a view to his reinstatement. The Chairman, Mr. Forth, Principal of the Technical Institute, declared in his address that "they had started the battle in Belfast and were determined to be in at the finish."

The Ladies' School Dinner Committee held its fourth Annual Meeting in the Mansion House on February 27, Sir Charles Cameron, C.B., being in the chair. The Committee has extended its work year by year, and now provides dinners, and in some cases breakfasts, for 650 children daily. Some of the children pay 4d. for the dinner, but the majority receive it free. The results have been a marked improvement in the health and intelligence of the children and an increase in the school attendance. Dr. Boyd Barrett, one of the speakers, moved a resolution urging the necessity of extending to Ireland the provisions of the Education (Provision of Meals) Act of 1906.

At the annual distribution of prizes to the students of the Metropolitan School of Art on March 13, at which the Lord Lieutenant presided, it was interesting to learn from the report read by the Head Master, Mr. Ward, that the specimens of metal work and enamels by Dublin students at the exhibition held in Dresden in August 1912 attracted so much attention that subsequently, when the British Section of the International Art Congress decided to present a memento to the Mayor and City Council of Dresden, and fixed upon a medallion in gold, silver, and enamels as the most suitable form of the presentation, the work was given to the Dublin Metropolitan School of Art. The medallion has now been finished and handed over to the recipients, and appears to be much appreciated in Dresden.

PRIZE COMPETITIONS.

The Translation Prize for March is awarded to "F.W.B." The winner of the Translation Prize for February is William H. Leek, Esq., Brookwood, Leigh, Lancashire.

Felix, qui propriis aevum transegit in arvis,
ipsa domus puerum quem videt, ipsa senem,
qui baculo nitens in qua reptavit harena
unius numerat saecula longa casae.
Illum non vario traxit fortuna tumultu,
nec bibit ignotas mobilis hospes aquas.
Non freta mercator tremuit, non classica miles,
non rauci lites pertulit ille fori.
Indocilis rerum, vicinae nescius urbis,
aspectu fruitur liberiore poli.
Frugibus aeternis, non consule computat annum:
autumnum pomis, ver sibi flore notat.
Idem condit ager soles idemque reducit,
metiturque suo rusticus orbe diem,

ingentem meminit parvo qui germine quercum
aequaeuvumque videt consenuisse nemus,
proxima cui nigris Verona remotior Indis
Benacumque putat litora Rubra lacum.
Sed tamen indomitae vires firmisque lacertis
aetas robustum tertia cernit avum.
Erret et extremos alter scrutetur Hiberos:
plus habet hic vitae, plus habet ille viae.

By F.W.B.

Happy the man whose life has fared 'mid fields he calls his own,
The shelter of his elder years, the home in childhood known!
Here crawled he in the very sand his staff now rests upon;
In this one house he counts a score of generations gone.
No plaything, he, of Fortune, tossed in her unquiet hands;
Not his to drink, a flitting guest, the waters of strange lands.
No venturer he, to start at storm, no knight—at tuck of drum;
No pleader in the courts to face the loud conflicting hum.
Unlearned in the World, to him yon Town a strange land is;
The larger and more liberal air of spacious heaven is his.
The fruits in season date for him, not consul's names, the year;
The apple-bough shows Autumn now, the flowers when Spring
is near.

The same horizon ushers forth the sun and shuts away;
This is the circle of his world, and dial of his day.
The sprouted acorn he recalls where stands the stately tree,
And his coeval coppice sees grown old and grey as he.
Verona yonder lies for him as Ind itself afar;
The Red Sea shores and Guarda's lake things equidistant are.
Yet stout as ever in his arm, his strength untamed by time;
The children of his children see him yet as in his prime.
Explore who may the far-away Iberian's abodes!
The one man prizes length of days, the other length of roads.

It is evident that in these verses Claudian is a "plagiarist by anticipation," and is reproducing in a copy of Etonian Elegiacs an unwritten ode of Shenstone's "In praise of a Country Life." To strip them entirely of their academic dress and reclothe them in their eighteenth century costume would be a matter of much time and labour, and the result probably would be, and certainly should be, very dull reading. In the copy I send I have made no attempt to match the Shenstone style. At the same time, I have borne in mind that Claudian's versification is not in itself monumental, like that of Virgil or Ovid, but only an academic imitation of classical models; and have tried in translation to reproduce the thought, rather than the language, of the original.—F.W.B.

We classify the 49 versions received as follows:—

First Class.—F.W.B., Fortune le veut, Atossa, Greenfinch, Cadogan, Allobroge, Sbogum, Essisemma, Homo Bulla (1).

Second Class.—Galatea, Far from the Madding Crowd, Aries, Angelus, Flâneur, Ariovistus, Felicitas, Muscatel, Anonymous, O.M., Asteria, C.R.E., Saunton, Homo Bulla (2), Amadan, Fircroft, Dulais, Ursa Minor, Petite Suzanne.

Third Class.—M.P.H., Vicary, W.H.S., Treb, Dearman, Hilika, Alexandrine, Corbeau, Neo Classicus, F.V., Afghan, Dolphin, Corncrake.

Fourth Class.—Riva, M.F.R., Alverton, N.A.H., J.R.

Fifth Class.—Currer Bell, E.T.S.

The piece should have been turned into rhyming verse; blank verse does not suit a little morsel like this, and prose, to be at all adequate, should be eloquent. *Harena*: There can be no stress on the nature of the soil; the fruits (see lines 11 and 12) show this. It may mean, as one contributor suggests, "sphere of action." Pliny has *in mea harena*. *Traxit*: "attracted," missed by many. *Suo metitur orbe*: Misunderstood by many, "measures by his own horizon," as the preceding line shows. *Vitae viae* cannot be adequately and simply rendered. Several good attempts were made. "Fare," "faring farther and faring worse," seems to be the likeliest. Dr. Donaldson ended with pentameter: "This man has fared the best, that man the farther has fared." "Fortune le veut," without attempting the play on words, gives the meaning well in his clever and original version attributed to the Senex in his own rustic lingo: "If you want fur to cover the ground, take a ticket to Rome; if you want fur to live, my advice to you is, stop at 'ome." This version deserves a prize for its originality. "Plus vitae," surely "not a longer life," but "more of life" in the sense of life worth living, as the whole piece shows.

"F.W.B." has been placed first; his lines have more literary quality than the rest. But there are some excellent copies in Class I. It is invidious and almost impossible to arrange in order of merit: this remark applies to all the classes.

LONDON: WILLIAM RICE, 3 BROADWAY, E.C.

A Prize of Two Guineas is offered for the best translation of the following extract from G. Droz :—

Le signe le plus apparent des transformations qu'a subies la société depuis que je suis au monde est, suivant moi, la suppression de cette courtoisie charmante qui faisait de notre France la plus aimable et la plus facile des nations. Sans distinction de classes ni de fortunes, on trouvait partout, autrefois, bienveillance et affabilité; ces qualités étaient dans notre air; on mettait une sorte d'honneur national à rentrer ses griffes, à ne laisser voir que le moins mauvais côté de soi, et dans nos campagnes même, le plus humble des paysans eût été humilié qu'on pût l'accuser d'impolitesse et de grossièreté.

En étaient-ils meilleurs?—Je le crois fermement, car la forme fait partie du fond, et la vraie politesse des manières ne va pas sans cordialité.

Laissons dire ces austères farceurs qui, pompeusement, négligent l'apparence, sous prétexte de sincérité, et cherchent en toute chose la vérité toute nue, le principe, l'essence, la moelle; les gourmands!

Le désir de plaire, en effet, est un raffinement du cœur et de l'esprit qui veut, pour se développer et se répandre, le loisir, la sécurité.

—Il lui faut, comme aux plantes délicates, une atmosphère calme et tiède. Ceux-là seuls songent à se faire aimer qui n'ont plus besoin de se faire craindre.

Aux époques de trouble, les moindres concessions sont un danger, car alors la bienveillance est taxée de faiblesse, et si l'on est simplement poli, il semble qu'on désarme.

Or, l'art de plaire, tel qu'on l'entendait autrefois, consistait précisément à se désarmer pour autrui. On était aimable moins par ses talents et ses avantages que par l'espèce d'abandon qu'on semblait en faire.

Plaire, c'était pour ainsi dire partager avec autrui. Briller, au contraire, c'est fouiller dans la poche du voisin.

On cherchait autrefois à se faire des amis; on songe maintenant à s'amasser un public.

La causerie était comme un échange de petits cadeaux affectueux; ce n'est maintenant qu'un boniment féroce, où l'on joue du poing autant que de la langue, et dont l'auditoire sort meurtri.

Je ne sais plus qui a dit fort joliment: "Le plaisir le plus exquis

est d'en avoir pu donner aux autres, et d'avoir eu le bonheur de leur plaire: ce qui fait que nous ne sortons jamais plus contents de la conversation que lorsque nous pouvons nous flatter en quelque manière que les autres le sont de nous."

Cela est un peu recherché, je vous l'accorde, mais cette préciosité me plaît; me plaît d'autant plus qu'elle est moins généralement goûtée. Au milieu des rudesses qui nous entourent, je trouve plaisantes ces douceurs d'autrefois, j'aime ces petites oasis fanées, pleines des senteurs de ma jeunesse.

Et puis, quand on voit autour de soi tant d'ivrognes boire au tonneau des drogues infernales, on ne souhaite qu'une larme de liqueur bien douce, contenue dans un dé d'or.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by April 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted. Translations will not be returned unless both these conditions are complied with.

At the Annual Meeting of the Froebel Society, on March 25, Lady St. Helier was elected President for the ensuing year, and delivered her Presidential Address on "Self-Activity in Education." The President was supported by Mr. J. W. Gilbert, Chairman of the Education Committee, L.C.C. The vote of thanks was moved by Mr. T. Raymont, Vice-Principal of the Goldsmiths' College. Mr. H. R. Hall, of the Society's Council, was elected Hon. Treasurer, in succession to Alderman H. Keatley Moore, B.A., Mus.Bac., who has held the post of Treasurer since the foundation of the Society in 1874.

300 MEDALS AND PRIZES!!!

STUDENT'S ELEMENTARY BOOK-KEEPING

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield.

who will forward copy Index and Specimen Pages on receipt of Post Card addressed to Box D 50, Huddersfield.

360 Pages. 19th Edition. Post free 2/-.

100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1/-.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all Elementary Examinations in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the Society of Arts, West Riding County Council, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.

The exercises and the principles introduced therein are so carefully graded in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The Questions will be found very useful for testing the student's knowledge at each stage of his work. Examination Papers of the Society of Arts, the W.R.C.C., and College of Preceptors are included.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

THE STUDENT'S BUSINESS METHODS and Commercial Correspondence.

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward Specimen Pages and Index on receipt of Post Card addressed to P.O. Box D 50, Huddersfield.

Sixth Edition. 370 Pages.

2/6 Post free.

80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.

This is the only practical, up-to-date book on Commercial Correspondence and Office Work, and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well graduated, and the teacher is saved the drudgery of preparing Test Papers, one of which follows every chapter, in addition to numerous Examination Papers. PRACTICAL work is provided in the Series of Business Transactions included in some of the Test Papers. It is the only Complete Guide, covering all the Elementary Examinations. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. Efficiency should be the first consideration. It is an excellent Handbook for the Junior in the Office. Teacher's Specimen, from Author only, 1/3 post free.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

ASSISTANT MISTRESSES AND GOVERNESSES.

Messrs. GABBITAS, THRING & CO.,

36 SACKVILLE STREET, LONDON, W.,

have a Department for SECURING APPOINTMENTS as MISTRESSES or MATRONS in Schools, and as GOVERNESSES in Private Families.

They invite applications from qualified ladies who are looking for posts in the teaching profession.

The Agency, which is under distinguished patronage, has been established 40 years.

Prospectus will be forwarded gratis on application.

NO CHARGE FOR REGISTRATION.

No fee of any kind is due unless an appointment be obtained through the Agency.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS.

MESSRS. GABBITAS, THRING & CO. have a large number of **GIRLS' SCHOOLS** on the books of their Transfer Department, but **ISSUE NO LIST**. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are a few of the Schools now on their books:—

IN AND NEAR LONDON.

No. 5,326. **TRANSFER** of old-established **DAY SCHOOL** for gentlemen's daughters, with **PREPARATORY DEPARTMENT** for Boys and **KINDERGARTEN**, containing nearly 40 Day Pupils and Day Boarders. Prospectus fees from 9 guineas in Kindergarten to 22½ guineas. **GROSS RECEIPTS £850**. Profits £75. Goodwill £250.

No. 4,694. **TRANSFER** of **PROFITABLE BOARDING AND DAY SCHOOL** in healthy residential locality. Grounds of 4 or 5 acres. About 15 Boarders and 25 Day Pupils. Prospectus fees from £75 to £94 10s., and from £12 12s. to £22 1s. respectively. Good Continental connexion. Gross receipts about £2,500, and profits £500. Goodwill £1,250.

IN THE SOUTH OF ENGLAND.

No. 5,319. **DAY** connexion in the Home Counties, suitable for a **LADY WITH NAVAL OR MILITARY CONNEXION**. Vendors moving to a different part of the country and taking Boarders only for the future. About 20 Day Pupils. The only School strictly for **GENTLEMEN'S DAUGHTERS** in the locality. Receipts from Day Pupils nearly £400. Goodwill £150.

No. 5,315. **TRANSFER** or **PARTNERSHIP**, with a view to succession. School strictly for gentlemen's daughters, at South Coast Resort. About 20 Boarders and 12 Day Pupils. Fees £75 to £90, and 30 to 36 guineas respectively. Profits about £800. Excellent **PREMISES, SPECIALLY BUILT AND BEAUTIFULLY SITUATED**. Goodwill 2½ years' purchase. Premises would be sold or let.

No. 5,312. **TRANSFER** or **PARTNERSHIP**, with view to succession, of old-established and very **SUCCESSFUL SCHOOL** for the daughters of professional men, Boarders only, at a

IN THE SOUTH OF ENGLAND—continued.

SOUTH-EAST COAST RESORT. About 35 Pupils, at fees of 70 to 80 guineas. **PRACTICALLY FULL. PREMISES** specially erected for the School. Gross receipts over £2,700, and net profits over £450. **BOTH INCREASING**. For goodwill, furniture, and equipment about £2,000. Premises would be let.

No. 5,293. **TRANSFER** of **FIRST-RATE AND FLOURISHING BOARDING SCHOOL**, at South Coast Resort. Steadily full with 40 to 45 Boarders. Fees 90 to 105 guineas. Gross receipts about £8,000: **PROFITS ABOUT £1,500**. About £4,200 for goodwill. Furniture at valuation. Part purchase money accepted in the first instance.

No. 5,287. **TRANSFER** of **FLOURISHING BOARDING AND DAY SCHOOL** in an **IMPROVING RESIDENTIAL DISTRICT**, on the outskirts of a healthy seaside town, containing nearly 20 Boarders and 40 Day Pupils and Day Boarders. Prospectus fees respectively 45 to 75 and 12 to 18 guineas per annum. Day Boarders pay 9 guineas in addition. Gross receipts over £1,800, and profits over £400. Goodwill £900.

No. 5,274. **TRANSFER** of remunerative Boarding and Day School at a **SOUTH WEST COAST RESORT**. Containing about 20 Boarders and the same number of Day Pupils and Day Boarders. Prospectus fees 60 to 75 guineas, and 15 to 21 guineas. Gross Receipts nearly £2,500, and **NET PROFIT OVER £750**. Goodwill £1,800.

IN THE NORTH AND MIDLANDS.

No. 5,327. **TRANSFER** of successful School for **BOARDERS ONLY**, at a well-known **INLAND EDUCATIONAL CENTRE**. 25 Boarders. Prospectus fees from 45 to 51 guineas. Gross Receipts nearly £2,000, and net profits nearly £500. **EXCELLENT PREMISES**.

In the NORTH AND MIDLANDS—continued

Goodwill and freehold £4,500. Some could be left on mortgage.

No. 5,317. **OLD-ESTABLISHED** and **VERY PROFITABLE** Boarding and Day School, with Kindergarten, in Suburb of North Midland City. House specially constructed for the School. About 25 Boarders and 55 Day Pupils. Prospectus fees 60 guineas, and from 3 to 15 guineas. Gross receipts about £1,500. **STEADY ANNUAL PROFIT** of about £600. Goodwill £700.

No. 4,977. **TRANSFER** of old-established and very flourishing **BOARDING AND DAY SCHOOL** for gentlemen's daughters at **North West Coast Resort**. About 35 Boarders and 30 Day Pupils. Fees 60 to 66 and 9 to 27 guineas. Gross receipts nearly £4,000, and **NET PROFITS ABOUT £800**. Goodwill £2,000. Housecraft Department. **EXCELLENT EDUCATIONAL SCHOOL**.

ON THE CONTINENT.

No. 4,993. **TRANSFER** or Partnership in School mainly for English Girls, at important **EDUCATIONAL CENTRE IN GERMANY**. Containing Boarders only, nearly 20 in number, at prospectus fees of 81 guineas. Gross Receipts over £2,500. For the Goodwill of the whole £1,200.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

Telephone:
7021 Gerrard.

SCHOOL TRANSFER AGENCY.

(Established
1833.)

Proprietors—Messrs. GRIFFITHS, POWELL, SMITH & FAWCETT.

Offices—34 BEDFORD STREET, STRAND, AND 22 HENRIETTA STREET, COVENT GARDEN, LONDON, W.C.

Schools Transferred and Valued. NO CHARGE whatever will be made to Vendors of Schools or School Partnerships, by Messrs. Griffiths, Powell, Smith & Fawcett, unless a sale is effected or agreed upon.

SPECIAL NOTICE TO VENDORS.

As Messrs. GRIFFITHS, POWELL, SMITH & FAWCETT have at all times the names of a large number of intending Purchasers of Schools and School Partnerships on their books, they have every confidence in stating that they can readily effect a sale of any desirable Property they may be instructed to dispose of. All instructions receive the personal attention of one of the Partners of the firm.

No commission charge whatever will be made by Messrs. Griffiths, Powell, Smith & Fawcett, to Purchasers of Schools, or School Partnerships.
